The Colonization of the Amazon Anna Luiza Ozorio de Almeida, 2010-07-22 Deforestation in the Amazon one of today's top environmental concerns began during a period of rapid colonization in the 1970s Throughout that decade Anna Luiza Ozorio de Almeida a Stanford trained economist conducted a complex and massive economic study of what was going on in the Amazon who was investing what what was gained and what it cost in all its aspects The Colonization of the Amazon the resulting work brings together information on the physical demographic institutional and economic dimensions of directed settlement in the Amazon Basin and raises significant questions about the gains and losses of the settlers the reasons for these outcomes and the economic rationale behind the devastation of the rainforest Particularly illuminating is Almeida's exploration of the role of the frontier in Brazil and her distinction between types of migrants and migrations She concludes that the political costs avoided by not undertaking agrarian reform are being paid by devastating the Amazon with the conflict between distribution and conservation steadily worsening Today it can no longer be circumvented

The Future of Amazonia A. Hall, D. Goodman, 1991-01-12 The future of Brazilian Amazonia the world's largest remaining tropical rainforest hangs in the balance Two decades of destructive development have provoked violent struggles for control over the region's resources with disastrous social and environmental consequences This multi-disciplinary collection reviews past experience but focusses on the latest phase of Amazonian settlement Chapters by leading authorities examine such issues as colonisation in the most recent frontier areas multinational mining projects hydro electric schemes and the military occupation of Brazil's borders After demonstrating how new government and business activities have exacerbated social tensions and ecological destruction the volume considers alternative more sustainable strategies

Hecht, Alexander Cockburn, 2011-01-15 The Amazon rain forest covers more than five million square kilometers amid the territories of nine different nations It represents over half of the planet's remaining rain forest Is it truly in peril What steps are necessary to save it To understand the future of Amazonia one must know how its history was forged in the eras of large pre Columbian populations in the gold rush of conquistadors in centuries of slavery in the schemes of Brazil's military dictators in the 1960s and 1970s and in new globalized economies where Brazilian soy and beef now dominate while the market in carbon credits raises the value of standing forest Susanna Hecht and Alexander Cockburn show in compelling detail the panorama of destruction as it unfolded and also reveal the extraordinary turnaround that is now taking place thanks to both the social movements and the emergence of new environmental markets Exploring the role of human hands in destroying and saving this vast forested region The Fate of the Forest pivots on the murder of Chico Mendes the legendary labor and environmental organizer assassinated after successful confrontations with big ranchers A multifaceted portrait of Eden under siege complete with a new preface and afterword by the authors this book demonstrates that those who would hold a mirror up to nature must first learn the lessons offered by some of their own people **The Dynamics of Deforestation and Economic Growth in the Brazilian Amazon** Lykke E. Andersen, 2002-12-12 A multi disciplinary team of authors analyze the economics of Brazilian deforestation using a large data set of ecological and economic variables They survey the most up to date work in this field and present their own dynamic and spatial econometric analysis based on municipality level panel data spanning the entire Brazilian Amazon from 1970 to 1996 By observing the dynamics of land use change over such a long period the team is able to provide quantitative estimates of the long run economic costs and benefits of both land clearing and government policies such as road building The authors find that some government policies such as road paving in already highly settled areas are beneficial both for economic development and for the preservation of forest while other policies such as the construction of unpaved roads through virgin areas stimulate wasteful land uses to the detriment of both economic growth and forest cover
