**Food Traceability and Authenticity** Didier Montet, Ramesh C. Ray, 2017-11-22 Food traceability is a growing consumer concern worldwide Traceability is undertaken primarily at the administrative level where the use of advanced analytical tools is not

available Nevertheless the determination of geographical origin is a requirement of the traceability system for the import and export of foodstuffs EU regulation 178 2002 The topics covered in this book include the history of traceability legislations and rules the actual traceability techniques and the potential analytical techniques for food traceability such as molecular methods e g DGGE SSCP next generation sequencers NGS bio captors chromatographic techniques isotopic analysis that are used for discrimination of organic food fish oils The chromatographic techniques help in the use of volatile compounds analysis The isotope analysis helps in distinguishing between chicken meat and vegetable oils Ambient mass spectrometry is used for studying mycotoxins and alkaloids in foodstuffs and their management food and feed authentication in olive and other plant oils and wine Vibrational methods e g NMR and NIRS are used to trace food by global spectrum The book reviews the current and future techniques including metabolomic techniques *Authenticity of Foods of Animal Origin* Ioannis Sotirios Arvanitoyannis, 2016-01-05 Over the last 20 30 years the number of food poisoning incidents has increased considerably and this has had disastrous effects both on consumers and the food industry Several food industries went bankrupt due to huge amounts of money paid to compensate consumers family relatives These unfortunate incidents triggered consumer and governmental aw **Chemometrics and Authenticity of Foods of Plant Origin** Sofia Agriopoulou, Maria Tarapoulouzi, Theodoros Varzakas, 2022-12-22 One of the challenges facing the world is feeding the ever increasing population with food security being a growing 21st century problem This stresses the need for coordinated international systems to prevent and mitigate food fraud in global food supply chains Food fraud which is usually financially motivated has significant consequences including unfair competition major damage to markets and organizations loss of consumer confidence and it raises food safety issues A shift toward a more plant based diet can be endorsed to promote sustainability but also to improve public health and minimize animal suffering The aim of this book is to deal with issues related to authenticity and chemometrics of the most important food products of plant origin such as cereals nuts legumes table olives and olive oil coffee tea fruits and vegetables fruit juices spices mushrooms beers and wines and honey using state of the art analytical techniques and instrumentation coupled with available chemometric tools Food Authentication Raúl González-Domínguez, 2020-04-15 Multiple factors can directly influence the chemical composition of foods and consequently their organoleptic nutritional and bioactive properties including their geographical origin the variety or breed as well as the conditions of cultivation breeding and or feeding among others Therefore there is a great interest in the development of accurate robust and high throughput analytical methods to guarantee the authenticity and traceability of foods For these purposes a large number of sensorial physical and chemical approaches can be used which must be normally combined with advanced statistical tools In this vein the aim of the Special Issue Food Authentication Techniques Trends and Emerging Approaches is to gather original research papers and review articles focused on the development and application of analytical techniques and emerging approaches in food authentication This Special Issue comprises 12 valuable scientific

contributions including one review article and 11 original research works dealing with the authentication of foods with great commercial value such as olive oil Iberian ham and fruits among others
