of every major snack processing method and product current in the United States. If any reader believes I have omitted an important topic I would be glad to learn of it in the hope that there will be a Third Edition in which I can incorporate the suggested additions. One of the main purposes of this volume is to provide a source for answers to problems that the technologist encounters in the course of his or her daily work. Extensive bibliographies in which the emphasis is on recent publications extending into 1983 should permit the reader to resolve more complex or new questions. With these bibliographies as guides the food technologist can delve as deeply as he or she wishes into specialized aspects of the subject while at the same time the reader who is interested in the broad overall picture will not be distracted by excess detail.

Basic Food Chemistry Frank Lee, 2012-12-06. Food chemistry has grown considerably since its early foundations were laid. This has been brought about not only by research in this field but also and more importantly by advances in the basic sciences involved. In this second edition the chapters dealing with fundamentals have been rewritten and strengthened. Three new chapters have been added: Water and Solutions, Colloids and Minerals. The chapter on Fruits and Vegetables has been expanded to cover texture. Other chapters discuss flavor and colors together with one on browning reactions. The last seven chapters give the student a background of the classes of food products and beverages encountered in everyday use. Each chapter includes a summary and a list of references and suggested readings to assist the student in study and to obtain further information. Basic Food Chemistry is intended for college undergraduates and for use in food laboratories. The author wishes to express his appreciation to the following people who reviewed the chapters on their respective specialties: Doctors L. R. Hackler, M. Keeney, B. Love, L. M. Massey Jr, L. R. Mattick, W. B. Robinson, R. S. Shallenberger, D. F. Splittstoesser, E. Stotz, W. L. Sulzbacher and J. Van Buren. In addition the author wishes to express his appreciation to Dr. H. O. Hultin and Dr. F. W. Knapp for their reviews of the entire original manuscript and for their helpful comments. The author welcomes notices of errors and omissions as well as suggestions and constructive criticism.
