Dale A. Schoeller, M. Westerterp, 2017-08-15 Diet is a major factor in health and disease. Controlled long term studies in humans are impractical and investigators have utilized long term epidemiological investigations to study the contributions of diet to the human condition. Such studies while valuable have often been limited by contradictory findings, a limitation secondary to systematic errors in traditional self reported dietary assessment tools that limit the percentage of variances in diseases explained by diet. New approaches are available to help overcome these limitations and Advances in the Assessment of Dietary Intake is focused on these advances in an effort to provide more accurate dietary data to understand human health. Chapters cover the benefits and limitations of traditional self report tools, strategies for improving the validity of dietary recall and food recording methods, objective methods to assess food and nutrient intake, assessment of timing and meal patterns using glucose sensors and physical activity patterns using validated accelerometers. Advances in the Assessment of Dietary Intake describes new avenues to investigate the role of diet in human health and serves as the most up to date reference and teaching tool for these methods that will improve the accuracy of dietary assessment and lay the ground work for future studies.

Neuroendocrine Control of Feeding Behavior Serge H. Luquet, Riccarda Granata, Hubert Vaudry, 2019-11-20 The hypothalamus plays a crucial role in the regulation of food intake and energy homeostasis. Hypothalamic neuronal circuits thus represent a privileged target for the treatment of eating disorders and metabolic diseases. The present eBook constitutes a unique collection of research articles and reviews that highlight new concepts and recent findings about the neuroendocrine control of feeding behavior.

Food IS Medicine Brian Clement, 2014-10-20 The Food IS Medicine series emphasizes the powerful effect that an organic plant based diet has on disease prevention and recovery. The evidence provided in this series suggests that when a diet consists of a wide variety of health building foods it protects cells from degeneration and affords greater potential for a longer life. Volume Three compiles summaries of current scientific studies that spotlight the foremost dietary hazards to human health. High on this list are meat, dairy products and sugar. Processed foods, food additives and food contaminants are also proving to be a potential cause of chronic illness. Brian Clement advocates that avoiding non foods and an ever increasing group of manmade products is just as important in disease prevention and longevity as the consumption of a proper diet. This indispensable reference provides key findings on dozens of conditions and their relationship to the foods we eat.

Antioxidants and Functional Foods for Neurodegenerative Disorders Abhai Kumar, Debasis Bagchi, 2021-01-07 Neurodegenerative diseases including Alzheimer's and Parkinson's disease are a growing problem across the world's aging population. Oxidative stress in the brain plays a central role in a common pathophysiology of these diseases. This book presents scientific research on the potential of antioxidant therapy in the prevention and treatment of neurodegenerative disorders. This book outlines the roles of oxidative stress and diabetes mellitus in neurodegeneration, describes the molecular mechanisms of neurodegenerative disorders including the roles of environmental pollutants and inflammatory responses and explores mitochondrial dysfunction.
