Hippocampus As A Cognitive Map:

The Hippocampus as a Cognitive Map John O'Keefe, Lynn Nadel, 1978

The Construction of Cognitive Maps Juval Portugali, 2007-08-23 and processes which are exclusive to humans in their encoding storing decoding and retrieving spatial knowledge for various tasks The authors present and discuss connectionist models of cognitive maps which are based on local representation versus models which are based on distributed representation as well as connectionist models concerning language and spatial relations As is well known Gibson's 1979 ecological approach suggests a view on cognition which is diametrically different from the classical main stream view perception and thus cognition is direct immediate and needs no internal information processing and is thus essentially an external process of interaction between an organism and its external environment The chapter by Harry Heft introduces J J Gibson's ecological approach and its implication to the construction of cognitive maps in general and to the issue of wayfinding in particular According to Heft main stream cognitive sciences are essentially Cartesian in nature and have not as yet internalized the implications of Darwin's theory of evolution Gibson in his ecological approach has tried to do exactly this The author introduces the basic terminology of the ecological approach and relates its various notions in particular optic flow nested hierarchy and affordances to navigation and the way routes and places in the environment are learned

Beyond the Cognitive Map A. David Redish, 1999 There are currently two major theories about the role of the hippocampus a distinctive structure in the back of the temporal lobe One says that it stores a cognitive map the other that it is a key locus for the temporary storage of episodic memories A David Redish takes the approach that understanding the role of the hippocampus in space will make it possible to address its role in less easily quantifiable areas such as memory Basing his investigation on the study of rodent navigation one of the primary domains for understanding information processing in the brain he places the hippocampus in its anatomical context as part of a greater functional system Redish draws on the extensive experimental and theoretical work of the last 100 years to paint a coherent picture of rodent navigation His presentation encompasses multiple levels of analysis from single unit recording results to behavioral tasks to computational modeling From this foundation he proposes a novel understanding of the role of the hippocampus in rodents that can shed light on the role of the hippocampus in primates explaining data from primate studies and human neurology The book will be of interest not only to neuroscientists and psychologists but also to researchers in computer science robotics artificial intelligence and artificial life

Space, Time and Memory in the Hippocampal Formation Dori Derdikman, James J. Knierim, 2014-07-08 The discovery of new cell types such as grid and time cells in the hippocampus has been accompanied by major anatomical and theoretical insights in the recent years This book provides comprehensive up to date information about the hippocampal formation and especially the neural basis of episodic memory spatial location the formation of the cognitive map and temporal representation The first part of the book describes the information flow from pre hippocampal areas into the hippocampus the second part discusses the different

types of hippocampal processing and finally the third part depicts the influence that the hippocampal processing has on other brain structures that are perhaps more closely tied to explicit cognitive or behavioral output This book is intended for neuroscientists especially for those who are involved in research on the hippocampus as well as for behavioral scientists and neurologists **Reading and Mapping Fiction** Sally Bushell,2020-07-02 This book explores the power of the map in fiction and its centrality to meaning from Treasure Island to Winnie the Pooh *Hippocampal Place Fields* Sheri J.Y.

Mizumori,2008-02-26 Data from neuropsychological and animal research suggest that the hippocampus plays a pivotal role in two relatively different areas active navigation as well as episodic learning and memory Recent studies have attempted to bridge these disparate accounts of hippocampal function by emphasizing the role that hippocampal place cells may play in processing the spatial contextual information that defines situations in which learned behaviors occur A number of established laboratories are currently offering complementary interpretations of place fields and this book will present the first common platform for them Bringing together research from behavioral genetic physiological computational and neural systems perspectives will provide a thorough understanding of the extent to which studying place field properties has informed our understanding of the neural mechanisms of hippocampus dependent memory *Hippocampal Place Fields* Relevance to Learning and Memory will serve as a valuable reference for everyone interested in hippocampal function

Human Spatial Navigation Arne Ekstrom,Hugo J. Spiers,Véronique D. Bohbot,R. Shayna Rosenbaum,2018-08-07 The first book to comprehensively explore the cognitive foundations of human spatial navigation Humans possess a range of navigation and orientation abilities from the ordinary to the extraordinary All of us must move from one location to the next following habitual routes and avoiding getting lost While there is more to learn about how the brain underlies our ability to navigate neuroscience and psychology have begun to converge on some important answers In *Human Spatial Navigation* four leading experts tackle fundamental and unique issues to produce the first book length investigation into this subject Opening with the vivid story of Puluwat sailors who navigate in the open ocean with no mechanical aids the authors begin by dissecting the behavioral basis of human spatial navigation They then focus on its neural basis describing neural recordings brain imaging experiments and patient studies Recent advances give unprecedented insights into what is known about the cognitive map and the neural systems that facilitate navigation The authors discuss how aging and diseases can impede navigation and they introduce cutting edge network models that show how the brain can act as a highly integrated system underlying spatial navigation Throughout the authors touch on fascinating examples of able navigators from the Inuit of northern Canada to London taxi drivers and they provide a critical lens into previous navigation research which has primarily focused on other species such as rodents An ideal book for students and researchers seeking an accessible introduction to this important topic *Human Spatial Navigation* offers a rich look into spatial memory and the neuroscientific foundations for how we make our way in the world *The Study of Behavior* Jerry A. Hogan,2017-11-02 This book provides a unique

framework for understanding diverse issues across behavior studies facilitating collaboration between sub disciplines

Brain and Values Karl H. Pribram, 2018-01-17 This 5th volume of the Appalachian Conference discusses how the brain processes information the role of memory and value and models of creativity It pursues aspects of cognitive neuroscience and behavioral neurodynamics such as the topic of values and quantum distributed processing in the brain

Eight Key Brain Areas of Mental Health and Illness Jennifer Sweeton, 2021-11-30 Bridging the gap between neuroscience and clinical therapy In this handbook clinical psychologist and bestselling author Jennifer Sweeton details the eight main areas of the brain affected by mental illness how brain changes show up in the therapy room as symptoms and behaviors and the types of therapies and psychotherapeutic techniques research has shown can heal the brain Areas covered are the thalamus amygdala hippocampus insula nucleus accumbens anterior cingulate ventromedial prefrontal cortex and dorsolateral prefrontal cortex No longer will you need to feel unsure when referencing basic brain functions related to behavioral health After reading this book you will feel confident and excited about your ability to take a client centered strategic brain based approach to treatment planning Chapter summaries and tables of brain region mental health condition and therapeutic approach are included for easy reference

The Neurobiology of Spatial Behaviour Kathryn J. Jeffery, 2003 The Neurobiology of Spatial Behaviour is a crucial new reference in the dynamic field of navigation Kate Jeffery has assembled the creme de la creme of authors on current issues in spatial cognition and in doing so has produced the most comprehensive and up to date reference on the neurobiological and behavioural mechanisms of navigation This book is essential reading for anyone who is curious about how human and non human animals find their way about and how space is represented in the brain Dr Nicola S Clayton Reader in Comparative Cognition Clare College Cambridge This book explores the relationship between cellular processes and animal behaviour It does this by focusing on the domain of navigation bringing together scientists from either side of the brain behaviour divide in an attempt to explain the linkage between spatial behaviour and the underlying activity of neurons

Neuroergonomics Raja Parasuraman, Matthew Rizzo, 2008 Neuroergonomics can be defined as the study of brain and behavior at work It combines two disciplines neuroscience the study of brain function and human factors the study of how to match technology with the capabilities and limitations of people so they can work effectively and safely The goal of merging these two fields is to use the startling discoveries of human brain and physiological functioning both to inform the design of technologies in the workplace and home and to provide new training methods that enhance performance expand capabilities and optimize the fit between people and technology Research in the area of neuroergonomics has blossomed in recent years with the emergence of noninvasive techniques for monitoring human brain function that can be used to study various aspects of human behavior in relation to technology and work including mental workload visual attention working memory motor control human automation interaction and adaptive automation The proposed volume will provide the first systematic overview of this emerging area describing the theoretical background basic

research major methods as well as the new and future areas of application This collection will benefit a number of readers the experienced researcher investigating related questions in human factors and cognitive neuroscience the student wishing to get a rapid but systematic overview of the field and the designer interested in novel approaches and new ideas for application Researchers in human factors and ergonomics neuroscience cognitive psychology medicine industrial engineering and computer science will find this volume useful **Learning and Memory: A Comprehensive Reference** ,2017-07-07

Learning and Memory A Comprehensive Reference Second Edition Four Volume Set is the authoritative resource for scientists and students interested in all facets of learning and memory This updated edition includes chapters that reflect the state of the art of research in this area Coverage of sleep and memory has been significantly expanded while neuromodulators in memory processing neurogenesis and epigenetics are also covered in greater detail New chapters have been included to reflect the massive increase in research into working memory and the educational relevance of memory research No other reference work covers so wide a territory and in so much depth Provides the most comprehensive and authoritative resource available on the study of learning and memory and its mechanisms Incorporates the expertise of over 150 outstanding investigators in the field providing a one stop resource of reputable information from world leading scholars with easy cross referencing of related articles to promote understanding and further research Includes further reading for each chapter that helps readers continue their research Includes a glossary of key terms that is helpful for users who are unfamiliar with neuroscience terminology The Neurobiology of Cognition and Behavior John Hart (Jr.),2016 Neurobiology

of Cognition and Behavior is a cognitive neuroscience that maps cognitive behavioral units with anatomical regions in the human brain The brain behavioral associations are based on functional neuroimaging combined with lesion studies The findings will be used to explain differences in clinical syndromes with videos of patients included *Memory Mechanisms* K. Geoffrey White,Wickliffe C. Abraham,Michael C. Corballis,2014-02-25 Presenting the work of researchers who are at the forefront of the study of memory mechanisms this volume addresses a wide range of topics including physiological and biophysical studies of synaptic plasticity neural models of information storage and recall functional and structural considerations of amnesia in brain damaged patients and behavioral studies of animal cognition and memory The book s coverage of diverse approaches to memory mechanisms is intended to help dissolve the borders between behavioral psychology cognitive neuropsychology and neurophysiology When Brains Meet Buildings Michael A. Arbib,2021-08-17

After decades of research on minds and brains and a decade of conversations with architects Michael Arbib presents *When Brains Meet Buildings* as an invitation to the science behind architecture richly illustrated with buildings both famous and domestic As he converses with the reader he presents action oriented perception memory and imagination as well as atmosphere aesthetics and emotion as keys to analyzing the experience and design of architecture He also explores what it might mean for buildings to have brains and illuminates all this with an appreciation of the biological and cultural evolution

that supports the diverse modes of human living that we know today These conversations will not only raise the level of interaction between architecture and neuroscience but by explaining the world of each group to the other will also engage all readers who share a fascination with both the brains within them and the buildings around them Michael Arbib is a pioneer in the interdisciplinary study of computers and brains and has long studied brain mechanisms underlying the visual control of action His expertise makes him a unique authority on the intersection of architecture and neuroscience **Beethoven's Anvil** William Benzon, 2002 7F Why does the brain create music This text argues that the key to music's function lies in the very complexity of musical experience As well as being both personal and social the creation of music taps into the whole spectrum of human skills both physical and mental *Neurobiology of Learning and Memory* Joe L.
