Historian and Scientist Gaetano Salvemini, 1939 **The Science of History in Victorian Britain** Ian

Hesketh, 2016-09-12 New attitudes towards history in nineteenth century Britain saw a rejection of romantic literary techniques in favour of a professionalized scientific methodology The development of history as a scientific discipline was undertaken by several key historians of the Victorian period influenced by German scientific history and British natural philosophy This study examines parallels between the professionalization of both history and science at the time which have previously been overlooked Hesketh challenges accepted notions of a single scientific approach to history Instead he draws on a variety of sources monographs lectures correspondence from eminent Victorian historians to uncover numerous competing discourses Reader's Guide to the History of Science Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn Scientific History Elena Aronova, 2021-04-02 Increasingly scholars in the humanities are calling for a reengagement with the natural sciences Taking their cues from recent breakthroughs in genetics and the neurosciences advocates of big history are reassessing long held assumptions about the very definition of history its methods and its evidentiary base In *Scientific History* Elena Aronova maps out historians continuous engagement with the methods tools values and scale of the natural sciences by examining several waves of their experimentation that surged highest at perceived times of trouble from the crisis ridden decades of the early twentieth century to the ruptures of the Cold War The book explores the intertwined trajectories of six intellectuals and the larger programs they set in motion Henri Berr 1863 1954 Nikolai Bukharin 1888 1938 Lucien Febvre 1878 1956 Nikolai Vavilov 1887 1943 Julian Huxley 1887 1975 and John Desmond Bernal 1901 1971 Though they held different political views spoke different languages and pursued different goals these thinkers are representative of a larger motley crew who joined the techniques approaches and values of science with the writing of history and who created powerful institutions and networks to support their projects In tracing these submerged stories Aronova reveals encounters that profoundly shaped our knowledge of the past reminding us that it is often the forgotten parts of history that are the most revealing **The Past, Present, and Future of Integrated History and Philosophy of Science** Emily Herring, Kevin Matthew Jones, Konstantin S. Kiprijanov, Laura M Sellers, 2019-05-14 *Integrated History and Philosophy of Science* iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and

in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS

History as a Science: The Philosophy of R.G. Collingwood Jan van der Dussen, 1981-10-31 1 1

COLLINGWOOD'S RECEPTION Collingwood's scholarly reputation is a complicated and variegated affair For one has not only to make a distinction between his reputation during his life and after his premature death in 1943 but also between his reputation as a philosopher and as an archaeologist and historian Collingwood himself considered philosophy as his primary occupation and his work in archaeology and history as that of an amateur This work however reached the highest standards and his contributions to archaeology and history have always been appreciated accordingly Though Collingwood's reputation as the main expert on Roman Britain in the period between the two wars remains unchallenged modern developments in this field have inevitably superseded his contributions and made them primarily voices from a past period Philosophy was the other half of Collingwood's scholarly life In his own thinking there was always a close relationship between philosophy and archaeological and historical practice His interpreters have not always recognized this connection I have met archaeologists who were surprised to hear that Collingwood was a philosopher as well who either did not know that he had been a practising and philosophers archaeologist and historian or thought it no more than a private hobby Collingwood's reputation as a philosopher was very different from the one he gained in archaeology and history For in the philosophical climate at Oxford between the wars he was always an isolated figure

The Scientific Life Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people *The Scientific Life* is historian Steven Shapin's story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin's last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims *The Scientific Life* is essential reading for anyone wanting to reflect on late modern American culture and

Modern Science is a companion to world history modern in coverage generous in breadth and cosmopolitan in scope The volume s utility is enhanced by a thematic outline of the entire contents a thorough system of cross referencing and a detailed index that enables the reader to follow a specific line of inquiry along various threads from multiple starting points Each essay has numerous suggestions for further reading all of which favor literature that is accessible to the general reader and a bibliographical essay provides a general overview of the scholarship in the field Lastly as a contribution to the visual appeal of the Companion over 100 black and white illustrations and an eight page color section capture the eye and spark the imagination Barcelona: An Urban History of Science and Modernity, 1888-1929 Oliver Hochadel, Agustí

Nieto-Galan, 2016-04-14 The four decades between the two Universal Exhibitions of 1888 and 1929 were formative in the creation of modern Barcelona Architecture and art blossomed in the work of Antoni Gaudí and many others At the same time social unrest tore the city apart Topics such as art nouveau and anarchism have attracted the attention of numerous historians Yet the crucial role of science technology and medicine in the cultural makeup of the city has been largely ignored The ten articles of this book recover the richness and complexity of the scientific culture of end of the century Barcelona The authors explore a broad range of topics zoological gardens natural history museums amusement parks new medical specialities the scientific practices of anarchists and spiritists the medical geography of the urban underworld early mass media domestic electricity and astronomical observatories They pay attention to the agenda of the bourgeois elites but also to hitherto neglected actors users of electric technologies and radio amateurs patients in clinics and dispensaries collectors and visitors of museums working class audiences of public talks and female mediums Science technology and medicine served to exert social control but also to voice social critique Barcelona An urban history of science and modernity 1888 1929 shows that the city around 1900 was both a creator and facilitator of knowledge but also a space substantially transformed by the appropriation of this knowledge by its unruly citizens **Mathematics and the Historian's Craft** Michael

Kinyon, Glen van Brummelen, 2006-06-18 The Kenneth May Lectures have never before been published in book form Important contributions to the history of mathematics by well known historians of science Should appeal to a wide audience due to its subject area and accessibility Routledge History of Philosophy Volume VII C. L. Ten, 2013-01-11 The Nineteenth Century provides a broad scholarly introduction to nineteenth century philosophy It also contains a glossary of philosophical terms and a chronological table of philosophical and cultural events **Rethinking History, Science, and Religion**

Bernard Lightman, 2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship This volume evaluates the utility of the complexity principle in past present and future scholarship First put forward by historian John Brooke over twenty five years ago the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science and religion

Rethinking History Science and Religion brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing the global history of science the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model *Philosophy and Conceptual History of Science in Taiwan* Zhenghong Lin, Daiwie Fu, 1993 Counter This is a collection of papers on philosophy of science conceptual history of science and sociology of science written by Taiwanese scholars It is perhaps one of the best written by Taiwanese in all Chinese speaking societies Some works in it show Orientals study topics that are typically Western philosophy of science Others show how traditional topics in the history of Chinese science mathematics optics and geology could be studied with high sensitivity to the philosophy and sociology of science It also touches upon issues of the autonomous development of social sciences in Taiwan a society whose academic researches are greatly influenced by the West This collection will prove stimulating and valuable to general and scholarly readers alike who are interested in philosophy and history of science especially as related to East Asia and the West The book will interest scholars in philosophy of science philosophy of language and psychology studies of philosophy of science in the third world history of Chinese science history of science in East Asia and history of mathematics Science and Technology in World History James Edward McClellan, Harold Dorn, 2006-04-14 Publisher description Atlas of the History of Modern Science 1500-2020 Thomas H. Brobjer, 2025-02-27 This Atlas of the History of Modern Science functions as a textbook to help the student by means of diagrams and flowcharts to better understand both science and the history of science It thus also aids the reader to better grasp the modern worldview Students can at a glance see the grand picture and orient him or herself among different traditions and thinkers and better organize and structure information about the history of science and the scientific developments This atlas is an invaluable textbook to every student of science of the history of science as well as for others seeking to understand our modern Weltanschauung and how we have arrived at it **History of Science, History of Text** Karine Chemla, 2004 This book explores the hypothesis that the types of inscription or text used by a given community of practitioners are designed in the very same process as the one producing concepts and results The book sets out to show how in exactly the same way as for the other outcomes of scientific activity all kinds of factors cognitive as well as cultural technological social or institutional conjoin in shaping the various types of writings and texts used by the practitioners of the sciences To make this point the book opts for a genuinely multicultural approach to the texts produced in the context of practices of knowledge It is predicated on the conviction that in order to approach any topic in the history of science from a theoretical point of view it may be fruitful to consider it from a global perspective The book hence does not only gather papers dealing with geometrical papyri of antiquity sixteenth century French books in algebra seventeenth century scientific manuscripts and paintings eighteenth and nineteenth century memoirs published by European academies or scientific

journals and Western Opera Omnia It also considers the problems of interpretation relating to reading Babylonian clay tablets Sanskrit oral scriptures and Chinese books and illustrations Thus it enables the reader to explore the diversity of forms which texts have taken in history and the wide range of uses they have inspired This volume will be of interest to historians philosophers of science linguists and anthropologists
