Shareholder Value and the Common Good David Lutz, Paul Mimbi, 2005 What is the objective or purpose of business Management According to the dominant theory of contemporary financial management scholarship agency theory business managers are obligated to maximise owner or shareholder value According to most theories of business ethics however some owner value maximising actions should not be performed because they would be unethical Because business management

scholars and business ethics scholars have not resolved this contradiction students of commerce receive a contradictory education The twenty five essays in this interdisciplinary international volume address the question of the objective or purpose of business management from a wide range of theoretical perspectives Since some of the writers contradict one another it is not possible that all of them are correct Nevertheless the fact that many of them argue persuasively that business managers should aspire to more than maximisation of a financial variable challenges everyone with a theoretical or practical interest in commerce to reconsider acceptance of the owner value paradigm and to develop a richer conception of the profession of business management

Dimensions of Change Lars Bo Henriksen, 2004 Since Heraclitus change has baffled perplexed and bemused Organisational change is no exception such change is an empirical fact but the extant conventional literature largely fails to enhance our understanding of this phenomenon Conventional theories models and methods do not possess the means of facilitating real understanding for either practitioners or researchers This book is a contribution to the development of theory and method on organisational change through interactions with real people in real organisations Grounded in a theory of reality based on a particular conceptualising method and illustrated with reference to real case

studies the authors explicate how to do both theory and method on organisational change in a novel concise and very readable way Reality is constructed by integrating four key dimensions facts logic values and communication these provide the material for the introductory chapters with the overall understanding of method emerging as one works through the remaining chapters Insights from mainly continental philosophy and social science are used to illustrate the key arguments throughout Conventional approaches are usually concerned with definitions and outcomes in contrast this book strongly emphasises the change process itself the discourse of change with respect to both real actors and observants and how new realities are constructed The book admirably fills the gap between the what is of conventional theory and how to of a much more pragmatic critically modernist approach to both studying and doing organisational change Book jacket
