*Late Quaternary Environments of the United States* was first published in 1983 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions In the late 1970s American and Russian scientists met twice in conferences on Quaternary paleoclimates sponsored by the U S U S S R Bilateral Agreement on the Environment The conferees agreed to prepare volumes summarizing the current status of research in the two countries *Late Quaternary Environments of the United States* provides a two volume overview of new and significant information on research of the last fifteen years since the 1965 publication of *Quaternary of the United States* edited by H E Wright Jr and D G Frey The volume on the late Quaternary in the Soviet Union will also be published by the University of Minnesota Press Volume 1 of *Late Quaternary Environments of the United States* covers the Late Pleistocene the interval between 25 000 and 10 000 years ago a time of extreme environmental stress as the world passed from full glacial conditions of the last ice age into the present interglacial age The interval of geologic time since the last glacial period termed the Holocene is the subject of Volume 2 The complexity of the natural changes occurring in the late Quaternary and their interrelationships make it impossible for a single scientific discipline to encompass them Thus the papers in both volumes come from authors in many research fields geology ecology physical geography archaeology geochemistry geophysics limnology soil science paleontology and climatology Many of the hypotheses presented especially on the dynamic Late Pleistocene environments are still hotly debated and will require additional testing as scientists strive to reconstruct the changing world of the glacial and postglacial ages      **Late- Quaternary Environments of the United States**, 1983

complexity of natural changes occurring in the late Quaternary and their interrelationships make it impossible for a single scientific discipline to encompass them. Thus the papers in both volumes come from authors in many research fields: geology, ecology, physical geography, archaeology, geochemistry, geophysics, limnology, soil science, paleontology, and climatology. Many of the hypotheses presented, especially on the dynamic Late Pleistocene environments, are still hotly debated and will require additional testing as scientists strive to reconstruct the changing world of the glacial and postglacial ages. **U.S.**

**Geological Survey Bulletin**, 1983 Late-quaternary Environments of the United States Porter, 1983 General Technical Report INT., 1990 Late-quaternary Environments of the United States Herbert Edgar Wright (Jr.), Stephen C. Porter, 1983 U.S. Geological Survey Professional Paper, 1984 Proceedings-- Symposium on Whitebark Pine Ecosystems, 1990 **U.S. Geological Survey Circular**, 1984 **American Beginnings** Frederick Hadleigh West, Constance F. West, 1996-12. During the last Ice Age a thousand mile wide land bridge connected Siberia and Alaska, creating the region known as Beringia. Over twelve thousand years ago a procession of large mammals and the humans who hunted them crossed this bridge to America. Much of the Russian evidence for this migration has until now remained largely inaccessible to American scholars. *American Beginnings* brings together for the first time in one volume the most up to date archaeological and palaeoecological evidence on Beringia from both Russia and America. An invaluable resource. It will no doubt remain the key reference book for Beringia for many years to come. Steven Mithen *Journal of Human Evolution*. Extraordinary. The fifty six contributors represent the most prominent American and Russian researchers in the region. Choice. Publication of this well illustrated compendium is a great service to early American and especially Siberian Upper Paleolithic archaeology. Nicholas Saunders *New Scientist*. This is a great book, perhaps the greatest contribution to the archaeology of Beringia that has yet been published. This is the kind of book to which archaeology should aspire. Herbert D G Maschner *Antiquity*. Water-resources Investigations Report, 1996 **Ecosystem Management for Parks and Wilderness** James K. Agee, Darryll R. Johnson, 1988. The need for cooperation among government agencies as well as an interdisciplinary approach to the increasingly challenging and complicated problem of managing park and wilderness areas prompted the University of Washington College of Forest Resources, the National Park Service, and the Forest Service to sponsor an ecosystem management workshop for scientists, planners, and managers. To develop an improved conceptual approach to managing change in ecosystems crossing natural and political boundaries, the workshop focused on defining terms, uncovering areas of misunderstanding, and barriers to cooperation, and developing methods to determine the most important problems and issues. Three needs emerged from the prioritization process: a precise definition of the management objectives for park and wilderness lands and how to integrate them with objectives for surrounding lands nationally as well as site specific; more information about physical, biological, and social components of park and wilderness ecosystems from both sides of political boundaries; and key indicators of ecosystem condition as well as methods for evaluating management

effectiveness All of these common themes point to a need for more precise direction in management goal setting and more accurate assessment of progress toward goals The book includes an introductory chapter by the editors and summary in which they outline a direction for ecosystem management in the next critical decades The other chapters by individual contributors include studies on laws governing park and wilderness lands paleoecological records that reveal the historic effects of climatic variations on vegetation change succession and natural disturbance in relation to the problems of what can and should be preserved managing ecosystems for large populations of vertebrates the management of large carnivores effects of air pollution lake acidification human ecology and environmental management the role of economics cooperation in ecosystem management and management challenges in Yellowstone National Park      *Summary of Technical Testimony in the Colorado Water Division 1 Trial* Nancy D.
