Launch Vehicles:

To Reach the High Frontier Roger D. Launius, 2002 Most towns did not have hospitals of their own before the mid twentieth century and Kentucky towns were no exception Kentucky s first real hospital opened in 1823 but it was in Louisville too far away to serve many Kentucky communities especially in cases of emergency For this and other reasons the lifespan of the average Kentuckian in the 1800s was only 40 years Today it has grown to 75 and trained medical professionals are available to most communities throughout the state Healing Kentucky tells how medical care changed in Kentucky over 200 years and became the much safer and better system we know today It also describes early healing practices and methods used to care for the sick in the days before safe hospitals even on Civil War battlefields From cholera epidemics to polio and plastic surgery readers will learn much about the people who shaped medicine in Kentucky Launch Vehicles of the National Launch Vehicle Program United States. set of requirements for continual and highly reliable monitoring of global conditions The Role of Small Satellites in NASA and NOAA Earth Observation Programs confronts these diverse requirements and assesses how they might be met by small satellites In the past the preferred architecture for most NASA and NOAA missions was a single large spacecraft platform containing a sophisticated suite of instruments But the recognition in other areas of space research that cost effectiveness flexibility and robustness may be enhanced by using small spacecraft has raised questions about this philosophy of Earth observation For example NASA has already abandoned its original plan for a follow on series of major platforms in its Earth Observing System This study finds that small spacecraft can play an important role in Earth observation programs providing to this field some of the expected benefits that are normally associated with such programs such as rapid development and lower individual mission cost It also identifies some of the programmatic and technical challenges associated with a mission composed of small spacecraft as well as reasons why more traditional larger platforms might still be preferred The reasonable conclusion is that a systems level examination is required to determine the optimum architecture for a given scientific and or operational objective The implied new challenge is for NASA and NOAA to find intra and interagency planning mechanisms that can achieve the most appropriate and cost effective balance among their various requirements
