**Methodology and Economics** John

Pheby,1988-06-14 Pheby's volume is especially to be welcomed as a clear and critical introduction to a large complex and confusing methodological literature It is recommended for all students of economics however experienced A W Coats Kyklos Professor Pheby in this much needed book gives a brilliant conducted tour of our subject G L S Shackle foreword to the Japanese edition Pheby has provided an antidote to the dangers of adopting an excessively paradigmatic attitude by supplying a well written comprehensible guide to this esoteric field More advanced scholars will appreciate his 168 entry bibliography D Whitehead Economics Methodology and Economics is a straightforward and interesting introduction in some of the methodologies that have influenced the work of economists which also quotation their attempts to imitate the natural science The way in which such naturalistic methodologies for example those of Bacon Descartes Popper Kuhn and Friedman have moulded much of the contemporary economics is discussed in a systematic and sequential fashion Against such approaches it is suggested that the contributions of Austrian methodologists and Marx deserve greater attention In conclusion an agenda for future methodological work is outlined **The Methodology of Economic Model Building**

**(Routledge Revivals)** Lawrence A. Boland,2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In *The Methodology of Economic Model Building* first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics **History, Methodology and**

*Handbook of Experimental Economic Methodology* Guillaume R. Fréchet, Andrew Schotter, 2015-01-02 The Handbook of Experimental Economic Methodology edited by Guillaume R Fr chette and Andrew Schotter aims to confront and debate the issues faced by the growing field of experimental economics For example as experimental work attempts to test theory it raises questions about the proper relationship between theory and experiments As experimental results are used to inform policy the utility of these results outside the lab is questioned and finally as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience the question of their proper place in the discipline of economics becomes less clear This book contains papers written by some of the most accomplished scholars working at the intersection of experimental behavioral and theoretical economics talking about methodology It is divided into four sections each of which features a set of papers and a set of comments on those papers The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued Some of the papers are contentious a healthy sign of a dynamic discipline while others lay out a vision for how the authors think experimental economics should be pursued This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics Researchers from a broad range of fields will benefit from the exploration of these important questions

**Hahn and Economic Methodology** Thomas Boylan, Paschal O'Gorman, 2012-03-15 Hahn on Methodology The Quest for Understanding addresses two fundamental questions i what is distinctive about economic theorising ii what is the cognitive value of the outcome of this activity of economic theorising i e

economic theory We will argue that for Hahn economic theorising is distinctive with respect to four dimensions Firstly the aim of economic theory is neither to describe nor explain the real economic world as in the physical sciences Rather the aim is to achieve objective but non scientific understanding Secondly the central question for economic theory remains for Hahn how to understand but not to predict as in physics for instance how decentralised choices interact and perhaps get co ordinated Thirdly Hahn identifies three commitments without which he argues economic theorising for him is not possible Finally economic theorising has a distinctive approach which Hahn calls its grammar of argumentation The Foundations of Economic Method ,2003 Patrick Suppes, Economics, and Economic Methodology John B. Davis,D. Wade Hands,2018-12-07 Patrick Suppes 1922 2014 was an extraordinarily wide ranging scholar Although best known as a philosopher of science Suppes made substantial contributions to a remarkably wide range of different fields of research including many relevant to economics decision theory philosophy of economics modeling theory foundations of measurement philosophy of psychology and thus what is now behavioral economics and many other fields This collection recognizes Suppes s contributions to economics and economic methodology with a symposium of papers that examine build on and or assess Suppes s research in these areas The authors include philosophers economists game theorists historians of economics and many whose research combine these fields This book honors Patrick Suppes while at the same time exhibiting the richness of contemporary philosophy of economics It was originally published as a special issue of the Journal of Economic Methodology

*From Political Economy to Economics* Dimitris Milonakis,Ben Fine,2008-10-29 Economics has become a monolithic science variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection The authors show how economics was once rich diverse multidimensional and pluralistic and unravel the processes that lead to orthodoxy s current predicament The book details how political economy became economics through the desocialisation and the dehistoricisation of the dismal science accompanied by the separation of economics from the other social sciences especially economic history and sociology It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists historians and other social scientists This has resulted in an impoverished historical and social content within mainstream economics The book ranges over the shifting role of the historical and the social in economic theory the shifting boundaries between the economic and the non economic all within a methodological context Schools of thought and individuals that have been neglected or marginalised are treated in full including classical political economy and Marx the German and British historical schools American institutionalism Weber and Schumpeter and their programme of Social konomik and the Austrian school At the same time developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore The prime

rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda This is done by treating economics as a social science once again rather than as a positive science as has been the inclination since the time of Jevons and Walras It involves transcending the boundaries of the social sciences but in a particular way that is in exactly the opposite direction now being taken by economics imperialism Drawing on the rich traditions of the past the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future

**The Methodology of Experimental Economics** Francesco Guala, 2005-08-01 The experimental approach in economics is a driving force behind some of the most exciting developments in the field The experimental revolution was based on a series of bold philosophical premises which have remained until now mostly unexplored This book provides the first comprehensive analysis and critical discussion of the methodology of experimental economics written by a philosopher of science with expertise in the field It outlines the fundamental principles of experimental inference in order to investigate their power scope and limitations The author demonstrates that experimental economists have a lot to gain by discussing openly the philosophical principles that guide their work and that philosophers of science have a lot to learn from their ingenious techniques devised by experimenters in order to tackle difficult scientific problems

**Methodology for a New Microeconomics (Routledge Revivals)** Lawrence A. Boland, 2014-06-03 First published in 1986 this title argues that the successful development of a new microeconomics requires a deeper understanding of methodological individualism and its role in stability analysis Lawrence Boland expounds a critique of neoclassical models which he contends often fail to include an explicit stability analysis He demonstrates that much of the sophisticated theoretical literature over the past thirty years can be understood as ad hoc attempts to overcome the deficiencies of such models in the absence of cogent stability analyses In conclusion he explains the need to update the theory taught at universities and to develop a truly individualist version of microeconomics that is consistent with the methodological principles of major neoclassical models An important contribution to economic methodology this work is a highly valuable resource for all students and teachers of economics at the undergraduate level

**Hahn and Economic Methodology** Thomas A. Boylan, Paschal Francis O'Gorman, 2012 Hahn on Methodology The Quest for Understanding addresses two fundamental questions i what is distinctive about economic theorising ii what is the cognitive value of the outcome of this activity of economic theorising i e economic theory We will argue that for Hahn economic theorising is distinctive with respect to four dimensions Firstly the aim of economic theory is neither to describe nor explain the real economic world as in the physical sciences Rather the aim is to achieve objective but non scientific understanding Secondly the central question for economic theory remains for Hahn how to understand but not to predict as in physics for instance how decentralised choices interact and perhaps get co ordinated Thirdly Hahn identifies three commitments without which he argues economic theorising for him is not possible Finally economic theorising has a distinctive approach which Hahn calls its grammar of argumentation
