The Economics of Development and Distribution William Loehr, John P. Powelson, 1981 Economic Development, Poverty and Income Distribution William Loehr, John Palen Powelson, 1982 Economic Development, the Family, and Income Distribution Simon Kuznets, 2002-09-12 This is a collection of essays by Simon Kuznets winner of the 1971 Nobel Memorial Prize in Economic Sciences published posthumously It represents the primary concerns of his research at a late phase of his career as well as themes from his earlier work The first four chapters deal with modern economic growth Chapters five to seven introduce the main theme of the remainder of the volume interrelations between demographic change and income inequality Chapters eight to ten draw on a wider set of data to make comparisons of income inequality among societies at widely different levels of development Chapter eleven returns to data for the United States to develop more fully the importance of differing childbearing patterns for income inequality In the introduction Professor Richard Easterlin discusses the relationship of the essays to the balance of Kuznets's writings In the afterword Professor Robert Fogel discusses the methodologies favoured by Kuznets *Economic Development, Poverty, And Income Distribution* William Loehr, 2019-04-10 The increasing inequality and poverty that seem inevitably to accompany economic growth in developing countries have become more and more evident in recent years The search for development paths that lead to growth with equality all too difficult to find is now an area of central concern for development economists One result of their concern is this volume in which internationally known representatives of a range of disciplines address themselves to ways in which growth with equity might be successfully achieved The book begins with both empirical and theoretical background to the development issues involved and with an overview of the experience of the international development assistance community focuses on operational definitions of the poor that will permit analytical policy oriented research to lead to useful conclusions Specific concern is expressed for small business owners women peasants and recent migrants from rural to urban areas The basic question of course is what can be done about poverty and inequality includes suggestions for specific measures and provides a comprehensive comparison across a wide range of policy options The book does not solve the problem but it does point to directions that promise a reasonably high probability of success And throughout suggestions are made for the kind of interdisciplinary research required to raise that probability even further *Distribution and Development* Gary S. Fields, 2002-07-26 Most of the world's people live in developing economies as do most of the world's poor The predominant means of economic development is economic growth In this book Gary Fields asks to what extent and in what circumstances economic growth improves the material standard of living of a country's people Most development economists agree that economic growth raises the incomes of people in all parts of the income distribution and lowers the poverty rate At the same time some groups lose out because of changes accompanying economic growth Fields examines these beliefs asking what variables should be measured to determine whether progress is being made and what policies and circumstances cause some

countries to do better than others He also shows how the same data can be interpreted to reach different even conflicting conclusions Using both theoretical and empirical approaches Fields defines and examines inequality poverty income mobility and economic well being Finally he considers various policies for broad based growth Copublished with the Russell Sage Foundation **The Cognitive Mechanics of Economic Development and Institutional Change** Bertin

This volume is a testament to the breadth and policy relevance of development economics today. It grapples with questions on how to design anti-poverty policies and under what conditions we can expect them to be successful. It concentrates on programmes and policies for India and covers international experience with cash transfer programmes. The work in this area applies core theoretical insights to policy discussions surrounding poverty measurement, income inequality, rural unemployment, and compares alternative growth strategies in terms of their impact on poverty and inequality. The book closes with chapters that trespass the boundaries of economics and enter the territory of politics to engage urgent concerns of the day that are the basis of much dispute and debate. The essays are collected under three broad themes: anti-poverty policies, land, labour, and financial markets, and political economy.

Economic Growth and Distribution Neri

Salvadori, 2006-01-01. Economic Growth and Distribution isolates and compares the logical structures and methodological underpinnings underlying the relationship between economic growth and distribution. It carries out an in-depth analysis of a wide range of issues connected with growth theory, considered from different theoretical perspectives. Its uniqueness is derived from the original contributions by a number of scholars of different persuasions, some within the mainstream and others from Keynesian, Kaleckian, Sraffian positions. The book deals with a wide variety of research topics concerning economic growth and distribution, such as the transition from the epoch of Malthusian stagnation to the contemporary era of modern economic growth, comparisons among the classical tradition, modern theory, and heterodox models, problems of policy dynamics, and business cycles, the role of institutions.

Income Distribution During System Reform and Economic Development in China Zongsheng Chen, Yunbo Zhou, 2005. The book is concerned with research on income distribution inequality of Chinese residents in the last 20 years of the 20th century and the beginning of the 21st century. Measuring and making clear the status of inequality of every consisting parts of normal income of Chinese residents is an important concept. First, on the basis of the statistical data and the estimated data as well as several kinds of methods that are used to calculate income inequality and suited for the available data, the authors computed the population income Gini Coefficients of normal income inequality respectively for China's national, urban, and rural areas. Second, by using urban-rural income ratio, Theil index, and others, they measured the status and trends of Chinese urban-rural gap and regional income disparity as well as their influence on the whole income inequality. Third, by case study and decomposition analysis, some main factors which had impacts on income inequality of urban and rural residents in China and their influence were researched. Fourth, the authors studied and measured the status and changes of the poor population and poverty rates in rural and urban areas in China. Fifth, the trend of inequality of normal income of Chinese residents was predicted at large, and the status of distribution inequality of Chinese residents was judged.

Inframarginal Contributions To Development Economics Christis G Tombazos, Xiaokai Yang, 2006-10-09 The core of classical economic analysis represented by William Petty and Adam Smith concentrated on the field of development economics This classical footing of the study of development is different from the neoclassical perspective in two important respects a it focuses on division of labor as the driving force of development and b it emphasizes the role of the market the invisible hand in exploiting productivity gains that are derived from division of labor However these aspects have received little attention in the body of literature that represents the modern field of development economics which largely represents the neoclassical application of marginalism A notable exception is research that utilizes inframarginal analysis of individuals networking decisions in an attempt to formalize the classical mechanisms that drive division of labor This book is a first attempt to collect relevant key contributions and is intended for active researchers in the field of development economics

Social Institutions and Economic Development Valpy FitzGerald, 2007-05-08 Jan Pronk The role of institutions in economic development has been debated at length It is a major chapter in the history of economic thought It was also a key issue in comparisons of the effectiveness of Eastern and Western economic systems Understanding the variety of social and cultural institutions has always been crucial in analysing development processes in Africa Asia the Middle East and Latin America Less attention has been given to institutions in studies of the economic performance of Western countries This may be because economic policies in the West were mostly oriented to the short and medium terms rather than to the long term perspective In the short run institutions are given in the long run they lend themselves for change From the outset economic institutions e.g. markets enterprises and their underlying values e.g. efficiency economic freedom received much attention Similar attention was given to political institutions the state government the law and values democracy accountability human rights Thought also turned to social institutions entrepreneurship the middle class the family household land tenure systems and social values tradition gender and age relations justice Studies soon followed of cultural institutions religion ethnicity and values material consumerism or the bond between man and nature Without the insight gained by studying institutions economics would have become a dull discipline

Population Growth, Income Distribution, and Economic Development Nico Heerink, 2012-12-06 In this book a model of long term interrelationships between income distribution population growth and economic development is developed and estimated from data for 54 countries The results indicate that a reduction of income inequality leads to lower fertility and mortality to improved basic needs satisfaction and to lower labour force participation of young and old males and of females in Asia and Africa The effect of income distribution on saving and consumption is found to be negligible These outcomes suggest that family planning and health policies in LDCs will show better results when they are supplemented with policies aimed at making the poor benefit from economic growth As regards development policy the results indicate that a reduction of income inequality does not impair the formation of physical capital but enhances the formation of human capital and lowers the growth rate of the labour force

Understanding Local Economic Development Emil Malizia, Edward J. Feser, Henry Renski, Joshua Drucker, 2020-10-05 This book offers insights into the process and the practice of local economic development Bridging the gap between theory and practice it demonstrates the relevance of theory to inform local strategic planning in the context of widespread

disparities in regional economic performance The book summarizes the core theories of economic development applies each of these to professional practice and provides detailed commentary on them This updated second edition includes more recent contributions regional innovation agglomeration and dynamic theories and presents the major ideas that inform economic development strategic planning particularly in the United States and Canada The text offers theoretical insights that help explain why some regions thrive while others languish and why metropolitan economies often rise and fall over time Without theory economic developers can only do what is politically feasible This text however provides them with a logical tool for thinking about development and establishing an independent basis from which to build the local consensus needed for evidence based action undertaken in the public interest Offering valuable perspectives on both the process and the practice of local and regional economic development this book will be useful for both current and future economic developers to think more profoundly and confidently about their local economy
