Economics For Decision Making:

Economic Decision Making Sisay Asefa, 1985

Managerial Economics Milton H. Spencer, Louis Siegelman, 1964

Economic Decision Making Using Cost Data Daniel Marburger, 2013-08-01 A firm maximizes profits if each decision adds more to the firm's revenue than to its costs. Although the concept sounds rather simple, it is difficult to do in practice. To ease this difficulty, the authors are giving you the inside knowledge to economic theory. This book will help you understand economic theory and much more to accurately infer changes in revenues that may be associated with a decision. And since economic theory suggests that the costs reported by accountants rarely reflect the true cost associated with the decision, this book will help you understand how to assess the changes in revenues and costs. Demand and price sensitivity analysis allow you to infer revenue changes, and this book helps you reconcile the economic theory of cost with common accounting practices so the differences can be reconciled and better decisions can be made. **Managerial Economics** Floyd E. Gillis, 1969

Dynamic Economic Decision Making John E. Silvia, 2011-08-09 A comprehensive analysis of the macroeconomic and financial forces altering the economic landscape. Financial decision making requires one to anticipate how their decision will not only affect their business but also the economic environment. Unfortunately, all too often both private and public sector decision makers view their decisions as one-off responses and fail to see their decisions within the context of an evolving decision making framework. In *Decision Making in a Dynamic Economic Setting*, John Silvia, Chief Economist of Wells Fargo and one of the top 5 economic forecasters according to Bloomberg News and USA Today, skillfully puts this discipline in perspective. Details realistic decision making approaches and applications under a broad set of economic scenarios. Analyzes monetary policy and addresses the impact of financial regulations. Examines business cycles and how to identify economic trends, how to deal with uncertainty and manage risk, the building blocks of growth and strategies for innovation. *Decision Making in a Dynamic Economic Setting* details the real world application of economic principles and financial strategy in making better business decisions. **The Psychology of Economic Decisions** Isabelle Brocas, Juan D. Carrillo, 2003. Psychologists have a long tradition of studying human behavior, strengths and weaknesses, biases and limitations. Economists have constructed normative frameworks that capture the most important elements of human decision making and developed powerful tools to determine individual and strategic choices in a variety of situations. Only recently have their strengths been combined and economic models enriched with key ingredients found in psychological studies. This volume covers four of the most important themes in this interdisciplinary field: feelings, inconsistencies, limitations, and biases. Each chapter contributes to a more comprehensive and accurate modelling and description of human behavior. Its four parts cover the origins, formation, and evolution of beliefs, consistency, commitment, and intertemporal separability of dynamic choices, attention, preference formation, and risk evaluation in limited cognition and affective behaviour, specifically the role of emotions in decision making. *Psychology of Decision Making in Economics, Business and Finance* Klaus P. Hofmann, 2007

In a fast moving world the necessity of making decisions and preferably good ones has become even more difficult One reason is the variety and number of choices perhaps available which often are not presented or understood Alternatives are often unclear and complex paths to them confusing and misleading Thus the process of decision making itself requires analysis on an ongoing basis Decision making is often made based on cultural factors whereas the best alternative might be quite different The subject touches ethics aspects as well as psychological considerations This book presents important research on the psychology of decision making related to economics business and finance

Neuroscience and the Economics of Decision Making Alessandro Innocenti, Angela Sirigu, 2012 In the last two decades there has been a flourishing research carried out jointly by economists psychologists and neuroscientists This meltdown of competences has lead towards original approaches to investigate the mental and cognitive mechanisms involved in the way the economic agent collects processes and uses information to make choices This research field involves a new kind of scientist trained in different disciplines familiar in managing experimental data and with the mathematical foundations of decision making The ultimate goal of this research is to open the black box to understand the behavioural and neural processes through which humans set preferences and translate these behaviours into optimal choices This volume intends to bring forward new results and fresh insights into this matter

Personality and Cognition in Economic Decision Making Aurora García-Gallego, Manuel I. Ibáñez, Nikolaos Georgantzis, 2017-08-22 Psychologists studying cognitive processes and personality have increasingly benefited from the wealth of theory methodology and decision making paradigms used in economics and game theory Similarly for the economists personality traits and basic cognitive processes offer a set of coherent explanatory constructs in economic behavior Given the debate on preference invariance and behavioral consistency across contexts and domains the papers in this topic shed light on the existence and effect of stable sets of idiosyncratic features on economic decision making While the effects of personality and cognition on economic decisions remain under explored the papers contributed in this topic offer more than a stimulus for further research The general message could be that personality and cognitive processes offer the stable idiosyncratic ground on which individual decisions are made

Behavioral and neuroscientific analysis of economic decision making in animals Tobias Kalenscher, Marijn Van Wingerden, The experimental analysis of animal behavior has a rich tradition in psychology behavioral ecology and many other scientific branches dedicated to the study of decision making However it has never enjoyed a similar popularity in economics This has recently changed with the dawn of neuroeconomics a discipline combining the analytic and experimental tools of psychology and economics with the technologies available in neuroscience to unravel the neurobiological mechanisms underlying economic behavior Since many of the sophisticated neuroscientific techniques can only be used on animals neuroeconomists have come up with a large and ever growing repertoire of animal models to probe economic decision making Besides the value of using animals as model systems to emulate human economic behavior the discipline of animal economic decision making exists in its very own right an abundance of animal species at various evolutionary stages show behavior that complies with many of the predictions of

economic theory whilst at the same time demonstrating violations of optimal choice models that are reminiscent of similar anomalies found in human behavior Hence the analysis of animal choice does not only offer insights into the evolutionary origins of economic decision making it also testifies that the analysis of animal behavior is a convenient economical and sound way to test competing economic decision models in optimally controlled experimental environments to probe their neural implementation and to yield common denominators in choice behavior In short economic theory provides more than just an alternative language to describe animal psychology its combination with biology psychology and neuroscience gives way to synergy effects that open up new venues for studying economic choice In this special issue we would like to gather the latest results from this cross disciplinary topic address the overlap and discrepancies in the neurobiology of economic decision making found between species and identify the challenges that lie ahead in translating results from species to species and ultimately to humans The exclusive focus on non human animals makes this Research Topic unique and distinct from previous special issues which covered a broader range of matters and subjects in the neurobiological analysis of decision making
