**Ecosystem Modeling in Theory and Practice** Charles A. S. Hall, John W. Day, 1990 **Sea Grant Publications Index**, 1977 **General Technical Report RM.**, 1983 **Analysis of Multiresource Production for National Assessments**

**and Appraisals** L. A. Joyce, 1983 *A Blue Carbon Primer* Lisamarie Windham-Myers, Stephen Crooks, Tiffany G.

Troxler, 2018-11-16 Key features Captures the historic context and recent developments in science and policy arenas that address the potential for coastal wetlands to be considered as significant contributors to carbon sequestration Links multiple levels of science biogeochemistry geomorphology paleoclimate etc with blue carbon concepts science policy mapping operationalization economics in a single compendium Concludes with a discussion of future directions which covers integrated scientific approaches impending threats and specific gaps in current knowledge Includes 7 case studies from across the globe that demonstrate the benefits and challenges of blue carbon accounting Written by over 100 leading global blue carbon experts in science and policy Blue Carbon has emerged as a term that represents the distinctive carbon stocks and fluxes into or out of coastal wetlands such as marshes mangroves and seagrasses The Blue Carbon concept has rapidly developed in science literature and is highly relevant politically as nations and markets are developing blue carbon monitoring and management tools and policies This book is a comprehensive and current compendium of the state of the science the state of maps and mapping protocols and the state of policy incentives including economic valuation of blue carbon with additional sections on operationalizing blue carbon projects and 7 case studies with global relevance

**Long-Term Forest Dynamics of the Temperate Zone** Paul A. Delcourt, Hazel R. Delcourt, 2012-12-06 The synthesis presented in this volume is a direct outgrowth of our ten year FORMAP Project Forest Mapping Across Eastern North America from 20 000 yr B P to the Present Many previous research efforts in paleoecology have used plant fossil evidence as proxy information for primarily geologic or climatic reconstructions or as a bio stratigraphic basis for correlation of regional events In contrast in this book we deal with ecological questions that require a holistic perspective that integrates the interactions of biota with their dynamically changing environments over time scales up to tens of thousands of years In the FORMAP Project our major research objective has been to use late Quaternary plant ecological data sets to evaluate long term patterns and processes in forest development In order to accomplish this objective we have prepared subcontinent scale calibrations that quantitatively relate the production and dispersal of arboreal pollen to dominance in the vegetation for the major tree types of eastern North America Quantification of pollen vegetation relationships provides a basis for developing quantitative plant ecological data sets that allow further ecological analysis of both individual taxa and forest communities through time Application of these calibrations to fossil pollen records for interpreting forest history thus represents a fundamental step beyond traditional summaries based upon pollen percentages *Principles for Estuarine Impact Assessment* Karin E. Limburg, 1984 *Land Use and the Carbon Cycle* Daniel G. Brown, Derek T. Robinson, Nancy H.

F. French,Bradley C. Reed,2013-01-28 As governments and institutions work to ameliorate the effects of anthropogenic CO<sub>2</sub> emissions on global climate there is an increasing need to understand how land use and land cover change is coupled to the carbon cycle and how land management can be used to mitigate their effects This book brings an interdisciplinary team of fifty eight international researchers to share their novel approaches concepts theories and knowledge on land use and the carbon cycle It discusses contemporary theories and approaches combined with state of the art technologies The central theme is that land use and land management are tightly integrated with the carbon cycle and it is necessary to study these processes as a single natural human system to improve carbon accounting and mitigate climate change The book is an invaluable resource for advanced students researchers land use planners and policy makers in natural resources geography forestry agricultural science ecology atmospheric science and environmental economics *General Technical Report PNW-GTR ,2007*

The Coastal Everglades Daniel L. Childers,Evelyn Gaiser,Laura A. Ogden,2019-09-25 The Coastal Everglades presents a broad overview and synthesis of research on the coastal Everglades a region that includes Everglades National Park adjacent managed wetlands and agricultural and urbanizing communities Contributors for this volume are all collaborators on the Florida Coastal Everglades Long Term Ecological Research Program FCE LTER The FCE LTER began in 2000 with a focus on understanding key ecosystem processes in the coastal Everglades while also developing a platform for and linkages to related work conducted by an active and diverse Everglades research community The program is based at Florida International University in Miami but includes scientists and students from numerous other universities as well as staff scientists at key resource management agencies including Everglades National Park and the South Florida Water Management District Though the Everglades landscape spans nearly a third of the State of Florida the focus on the coastal Everglades has allowed the contributors to examine key questions in social ecological science in the context of ongoing restoration initiatives As this book demonstrates the long term research of the FCE LTER has facilitated a better understanding of the roles of sea level rise water management practices urban and agricultural development and other disturbances such as fires and storms on the past and future dynamics of this unique coastal environment By comparing properties of the Everglades with other subtropical and tropical wetlands the book challenges ideas of novelty while revealing properties of ecosystems at the ends of gradients that are often ignored It also provides insights from and encouragement for long term collaborative studies that inform resource management in similarly threatened coastal wetland landscapes *Modeling Disease Transmission and Its Prevention by Disinfection* Christon J. Hurst,1996-11-13 Pathogenic microorganisms exploit a number of different routes for transmission and this book demonstrates how the spread of disease can be prevented through the practices of disinfection and controlling microbial growth The book is organized into four sections

**Alchemy and Uncertainty** Fred L. Bunnell,1989 **Geochemical Rate Models** J. Donald Rimstidt,2014 An accessible overview of rate models and fundamental kinetic theory with real world application examples for graduate

students and professional geochemists      *Integrated Coastal Zone Management of Coral Reefs* Kent Gustavson, Richard M. Huber, H. Jack Ruitenbeek, 2000 The applied research indicates that to improve awareness park education programs should be targeted specifically to the user groups primarily through outreach programs Further the Park s management programs should be highlighted particularly the beneficial tangible products and services benefits the Park provides to each user group The closer the tie between reef conditions and business earnings the greater the users support for reef conservation Coral reefs are sometimes referred to as canaries of the sea because of their early warning ability to show near shore oceanic stress Because of their biological diversity they are also called rainforests of the sea Coral reefs are vital to the well being of millions of people Coral reef managers and government officials trying to save their valuable national resources have turned to research on coral reefs for help The research presented in this publication merits a great deal of notice because the output is useful for decision support and training tools in integrated coastal zone management ICZM The work on cost effectiveness analysis has developed integrated economic and ecological models relying extensively on fuzzy logic procedures to model impacts and effects of interventions within the reef environment By contrast the marine system valuation work provides economic valuations of coral reefs demonstrating the use of different modeling methods and treating key policy issues within this context This publication will interest coastal zone experts and managers worldwide      *Handbook of Applied System Science* Zachary P. Neal, 2016-11-25 The Handbook of Applied System Science is organized around both methodological approaches in systems science and the substantive topic to which these approaches have been applied The volume begins with an essay that introduces three system science methods agent based modeling system dynamics and network analysis The remainder of the volume is organized around three broad topics 1 health and human development 2 environment and sustainability and 3 communities and social change Each part begins with a brief introductory essay and includes nine chapters that demonstrate the application of system science methods to address research questions in these areas This handbook will be useful for work in Public Health Sociology Criminal Justice Social Work Political Science Environmental Studies Urban Studies and Psychology      **Sources and Methods of Historical Demography** J. Dennis Willigan, Katherine A. Lynch, 2013-10-22 Sources and Methods of Historical Demography covers the fundamental sources methods and approaches to explanatory modeling for describing analyzing and understanding demographic features of past societies The book discusses the intellectual ancestry of historical demographic research beginning in the 17th century as well as the logic of basic techniques for reconstructing and analyzing information from fundamental source materials The text also describes the full range of disciplines that have made major contributions to historical demography and examples of empirical research The book concludes by arguing the case for conducting historical demographic research with a broad interdisciplinary ideal in mind Historians and sociologists will find the book invaluable      **FWS/OBS. ,1980      State-of-the-Art in Ecological Modelling** S. E. Jørgensen, 2013-10-22 State of the Art in Ecological Modelling covers the proceedings of the Conference on

Ecological Modeling held in Copenhagen Denmark from August 28 to September 2 1978 The book focuses on ecological modeling particularly prey predator models lake and river models toxic substances models and holistic approaches to ecological modeling The selection first discusses review presentations of ecological modeling including river models prey predator models application of graphical methods and lake models The application of microcosms in ecological modeling water quality and irrigation in agriculture models and distribution and effect of toxic substances models are also elaborated The text then takes a look at the models of sea and coastal areas atmospheric pollution ecosystems in the lithosphere and water management The book surveys multi species of planktons and nutrients model of lake eutrophication and modeling of vertical temperature distribution and its implication on biological processes in lakes Topics include mathematical expression of multi species of planktons and nutrients model in lake ecosystem observation data on water quality and planktons and models for vertical temperature distribution The selection is a dependable reference for readers wanting to dig deeper into ecological modeling

**Biodiversity in Managed Landscapes** Robert C. Szaro, David W. Johnston, 1996 The conservation of biodiversity has profound implications for managing natural resources with the need for scientific information as a foundation for management decisions increasing dramatically The intent of this book is to look beyond the theory of biodiversity to the principles practices and policies needed for its conservation Its objectives are to provide the scientific basis for understanding biodiversity document case examples of theory and concepts applied at differing scales and examine policies that affect its conservation

*Stock Identification Methods* Steven X. Cadrin, Lisa A. Kerr, Stefano Mariani, 2013-10-04 *Stock Identification Methods* 2e continues to provide a comprehensive review of the various disciplines used to study the population structure of fishery resources It represents the worldwide experience and perspectives of experts on each method assembled through a working group of the International Council for the Exploration of the Sea The book is organized to foster interdisciplinary analyses and conclusions about stock structure a crucial topic for fishery science and management Technological advances have promoted the development of stock identification methods in many directions resulting in a confusing variety of approaches Based on central tenets of population biology and management needs this valuable resource offers a unified framework for understanding stock structure by promoting an understanding of the relative merits and sensitivities of each approach Describes 18 distinct approaches to stock identification grouped into sections on life history traits environmental signals genetic analyses and applied marks Features experts reviews of benchmark case studies general protocols and the strengths and weaknesses of each identification method Reviews statistical techniques for exploring stock patterns testing for differences among putative stocks stock discrimination and stock composition analysis Focuses on the challenges of interpreting data and managing mixed stock fisheries
