Edition Mark A. Heald, Jerry B. Marion, 2013-04-22 This newly corrected highly acclaimed text offers intermediate level juniors and first year graduate students of physics a rigorous treatment of classical electromagnetism. The authors present a very accessible macroscopic view of classical electromagnetism that emphasizes integrating electromagnetic theory with physical optics. The survey follows the historical development of physics culminating in the use of four vector relativity to fully integrate electricity with magnetism. Starting with a brief review of static electricity and magnetism, the treatment advances to examinations of multipole fields, the equations of Laplace and Poisson, dynamic electromagnetism, electromagnetic waves, reflection and refraction, and waveguides. Subsequent chapters explore retarded potentials and fields and radiation by charged particles, antennas, classical electron theory, interference and coherence, scalar diffraction theory, and the Fraunhofer limit, Fresnel diffraction, and the transition to geometrical optics and relativistic electrodynamics. A basic knowledge of vector calculus and Fourier analysis is assumed, and several helpful appendices supplement the text. An extensive Solutions Manual is also available. *Classical Electromagnetic Radiation* Mark A. Heald, Jerry B.

Marion, 2012-12-19 Newly corrected, this highly acclaimed text is suitable for advanced physics courses. Beyond the Second Law Roderick C. Dewar, Charles H. Lineweaver, Robert K. Niven, Klaus Regenauer-Lieb, 2013-12-02 The Second Law a cornerstone of thermodynamics governs the average direction of dissipative non equilibrium processes But it says nothing about their actual rates or the probability of fluctuations about the average This interdisciplinary book written and peer reviewed by international experts presents recent advances in the

search for new non equilibrium principles beyond the Second Law and their applications to a wide range of systems across physics chemistry and biology Beyond The Second Law brings together traditionally isolated areas of non equilibrium research and highlights potentially fruitful connections between them with entropy production playing the unifying role Key theoretical concepts include the Maximum Entropy Production principle the Fluctuation Theorem and the Maximum Entropy method of statistical inference Applications of these principles are illustrated in such diverse fields as climatology cosmology crystal growth morphology Earth system science environmental physics evolutionary biology and technology fluid turbulence microbial biogeochemistry plasma physics and radiative transport using a wide variety of analytical and experimental techniques Beyond The Second Law will appeal to students and researchers wishing to gain an understanding of entropy production and its central place in the science of non equilibrium systems both in detail and in terms of the bigger picture

Electromagnetic Radiation Richard Freeman, James King, Gregory Lafyatis, 2019-01-17 Electromagnetic Radiation is a graduate level book on classical electrodynamics with a strong emphasis on radiation This book is meant to quickly and efficiently introduce students to the electromagnetic radiation science essential to a practicing physicist While a major focus is on light and its interactions topics in radio frequency radiation x rays and beyond are also treated Special emphasis is placed on applications with many exercises and problems The format of the book is designed to convey the basic concepts in a mathematically rigorous manner but with detailed derivations routinely relegated to the accompanying side notes or end of chapter Discussions The book is composed of four parts Part I is a review of basic E M electricity and magnetism and presents a concise review of topics covered in the subject Part II addresses the origins of radiation in terms of time variations of charge and current densities within the source and presents Jefimenko's field equations as derived from retarded potentials Part III introduces special relativity and its deep connection to Maxwell's equations together with an introduction to relativistic field theory as well as the relativistic treatment of radiation from an arbitrarily accelerating charge A highlight of this part is a chapter on the still partially unresolved problem of radiation reaction on an accelerating charge Part IV treats the practical problems of electromagnetic radiation interacting with matter with chapters on energy transport scattering diffraction and finally an illuminating application oriented treatment of fields in confined environments
