

1.2.Models: Economic models and Econometric models

- **A model** is a simplified representation, **not every detail**, of a real-world process.
 - ▶ It represents the **salient features** of the phenomena under study;
 - ▶ it should be simple enough to understand and complex enough to capture key information.
- **An economic model** is a **simplified version of reality** that allows us to observe, understand and make prediction about **economic behavior**.
 - ▶ **does not claim** to be able to predict **the specific behavior** of any individual or firm, but rather **describes the average or systematic behavior** of many individuals or firms.
 - ▶ consists of **mathematical equations** that describe various relationships.

Hendry, 1998-10-08 This book provides a formal analysis of the models procedures and measures of economic forecasting with a view to improving forecasting practice David Hendry and Michael Clements base the analyses on assumptions pertinent to the economies to be forecast viz a non constant evolving economic system and econometric models whose form and structure are unknown a priori The authors find that conclusions which can be established formally for constant parameter stationary processes and correctly specified models often do not hold when unrealistic assumptions are relaxed Despite the difficulty of proceeding formally when models are mis specified in unknown ways for non stationary processes that are subject to structural breaks Hendry and Clements show that significant insights can be gleaned For example a formal taxonomy of forecasting errors can be developed the role of causal information clarified intercept corrections re established as a method for achieving robustness against forms of structural change and measures of forecast accuracy re interpreted **Understanding Economic Forecasts** David F. Journal of Transportation and Statistics, *Econometric Models of Asian Link* Shinichi Ichimura, Mitsuo Ezaki, 2012-12-06 This is the first outcome of our effort in ASIAN LINK PROJECT to construct the econometric models of Asian developing countries and analyze their inter dependence with major trading partners the United States and Japan The model we present here is called Asian Link System The countries in this system include Korea Taiwan Hong Kong China the Philippines Thailand Malaysia Singapore Indonesia Japan and the United States They are covered by national models The rest of the world is divided into several regions and treated by simple proto type models The main characteristics of Asian Link System are to deal with the inter dependent relations between Asian developing countries on the one hand and Japan and United States on the other hand Here are presented these national

models and the Asian Link System with the underlying statistical data so that any econometrician can re estimate our models and check the results of our research work Nowadays most articles and books in econometrics report only the final results or conclusions of research so that no other econometrician can re calculate or re examine the findings This is very serious in the empirical research because as theorists may make mistakes positive economists do commit errors or miss some possible considerations Unless statistical data are offered other econometricians cannot make suggestions or improve the models This is the main reason why empirical research in econometrics or applied econometrics are not making substantial progress in recent years Commodity Models for Forecasting and Policy Analysis Walter C. Labys, Peter K. Pollak, 2024-02-01

Originally published in 1984 this book remains as relevant as when it was first published At that time the oil crises of the 1970s and the growing international debt burden highlighted the extent to which events in primary commodity markets continue to influence the economies of developing and industrialized economies alike Commodity modelling has become a valuable tool in efforts to predict and understand the behaviour of commodity markets and thereby reduce their fluctuations This book provides an overview of the nature of the different types of commodity model as well as their diverse applications In non technical language the reader is introduced to the underlying modelling methodologies including their advantages limitations and commodity specific implications The book will be of interest to commodity economists traders and analysts economic planners and those involved in agricultural mineral and energy modelling **Economic Forecasting** Terence C. Mills, 1999 Handbook of Econometrics Zvi Griliches, Michael D. Intriligator, 1983 The Handbook is a definitive reference source and teaching aid for econometricians It examines models estimation theory data analysis and field applications in econometrics Comprehensive surveys written by experts discuss recent developments at a level suitable for professional use by economists econometricians statisticians and in advanced graduate econometrics courses **Financial Economics and Econometrics** Nikiforos T. Laopodis, 2021-12-14 Financial Economics and Econometrics provides an overview of the core topics in theoretical and empirical finance with an emphasis on applications and interpreting results Structured in five parts the book covers financial data and univariate models asset returns interest rates yields and spreads volatility and correlation and corporate finance and policy Each chapter begins with a theory in financial economics followed by econometric methodologies which have been used to explore the theory Next the chapter presents empirical evidence and discusses seminal papers on the topic Boxes offer insights on how an idea can be applied to other disciplines such as management marketing and medicine showing the relevance of the material beyond finance Readers are supported with plenty of worked examples and intuitive explanations throughout the book while key takeaways test your knowledge and test your intuition features at the end of each chapter also aid student learning Digital supplements including PowerPoint slides computer codes supplements an Instructor's Manual and Solutions Manual are available for instructors This textbook is suitable for upper level undergraduate and graduate courses on financial economics financial econometrics empirical finance and related

quantitative areas **Macroeconometric Models** Władysław Welfe, 2013-02-15 This book gives a comprehensive description of macroeconometric modeling and its development over time The first part depicts the history of macroeconometric model building starting with Jan Tinbergen's and Lawrence R Klein's contributions It is unique in summarizing the development and specific structure of macroeconometric models built in North America Europe and various other parts of the world The work thus offers an extensive source for researchers in the field The second part of the book covers the systematic characteristics of macroeconometric models It includes the household and enterprise sectors disequilibria financial flows and money market sectors
