Recent Developments in Carbonate Sedimentology in Central Europe German Müller, G.M. Friedman, 2012-12-06 In the field of sedimentary research ever increasing emphasis has been put on the investigations of carbonates and carbonate rocks during the past 30 years It is thus quite natural that in Central Europe where classical carbonate investigations have already been carried out 100 years ago numerous scholars turned to the study of this sediment type On the occasion of a visiting professorship of G M FRIEDMAN at the Laboratorium für Sedimentforschung Heidelberg University a seminar on Recent Developments of Carbonate Sedimentology in Central Europe was held in July 1967 90 persons involved in carbonate investigations participated and 35 lectures were held The present volume contains 30 papers summarizing the different subjects of the seminar Of course these contributions only represent a small part of the work actually performed in the field of carbonate research in Central Europe We believe however that they give a general survey of the work and the working methods employed in the different sectors of carbonate investigations One of the purposes of the present symposium is to acquaint the English speaking countries with our recent results which usually due to the language barrier are not accessible to them *Princeton Alumni Weekly*, 1967
