representing a company each slice translates to a company's share value a bigger pie promises a generous slice Stocks albeit its popularity are not traded solely on the stock market Other financial securities are involved This could be corporate bonds exchange traded funds etc The perks of owning a share lie in the ability of the company to rake in profits As stated in the apple pie analogy buying stocks is a little risk dependent But greater risks guarantees a greater reward While stocks are said to be the shares in a company's ownership or profits bonds are a debt owed by the company Instead of taking a loan directly from a bank a company being a distinctive legal entity can borrow from individuals These individuals are said to have purchased a bond and bonds pose fewer risks than stocks A company facing bankruptcy would be forced to sell its assets to repay its debts while its shareholders come last The stock market therefore is simply a conglomerate of buyers sellers and intermediaries trading stocks and other financial securities A booming stock market is essential to overall economic stability as it allows companies to access funds from the masses A total of about 69 trillion are traded on the stock market a year surpassing the entire world economy So while money makes the world go round the stock market is the pedestal on which it rotates
