

7 TYPES OF INSTRUCTIONAL DESIGN MODELS

Merrill's Principles of Instruction

This model of learning is promoted when education is learner-centered. It activates existing knowledge and includes demonstrations by providing opportunities for application integration into the real world.

Bloom's Taxonomy

It includes six stages of cognitive learning: Remembering, Understanding, Applying, Analyzing, Evaluating, Creating.

Dick and Carey Model

To create efficient learning initiatives, in Dick and Carey Model, there are nine steps in this model. It incorporates the ADDIE model's five stages and adds depth and structure.

1 ADDIE

There are five stages of the ADDIE model of instructional design: Analysis, Design, Development, Implementation, and Evaluation.

2

3

Gagne's Nine Events of Instructions

Gagne's instructional design model focuses on learning outcomes and how to set up certain instructional events to attain those results. It is based on the information processing model of the mental events that occur when humans are exposed to various stimuli.

4

5

SAM

It is a simplified version of the ADDIE Model explicitly designed to elicit feedback and build working models earlier in the process. It is an iterative design and delivery model to meet the immediate demands of usable training collateral.

6

7

Action Mapping

Action mapping can be used by instructional designers to automatically produce training exercises that elicit autonomy, competence, and relatedness in learners.

First-Year College Students Maggie Murphy, 2019-05-15 The first year experience is an emerging hot topic in academic
libraries and many librarians who work with first year students are interested in best practices for engaging and retaining
them Professional discussion and interest groups conferences and vendor sponsored awards for librarians working with first
year students are popping up left and right A critical aspect of libraries in the first year experience is effective information
literacy instruction for first year students Research shows that despite growing up in a world rife with technology and
information students entering college rarely bring with them the conceptual understandings and critical habits of thinking
needed for finding evaluating and ethically using information in both academic and real world contexts Faculty in upper level
courses expect students to learn about the research process in their first year of college and instructors in the first year
curriculum expect librarians to teach this to their students Despite all this designing teaching and evaluating effective
information literacy instruction specifically for first year students is not necessarily intuitive for instruction librarians That is
why *Teaching First Year College Students A Practical Guide for Librarians* is a comprehensive how to guide for both new and
experienced librarians interested in planning teaching and assessing library instruction for first year students The book
Examines the related histories of library instruction and first year experience initiatives Summarizes and synthesizes
empirical research and educational theory about first year students as learners and novice researchers Establishes best
practices for engaging first year students through active learning and inclusive teaching Features excerpts from interviews
with a number of instruction librarians who work with first year students in a range of positions and instructional

Neuman, Mary Jean Tecce DeCarlo, Vera J. Lee, Stacey Greenwell, Allen Grant, 2019-12-31 The amount and range of information available to today's students and indeed to all learners is unprecedented. If the characteristics of the information age demand new conceptions of commerce, national security and publishing among other things, it is logical to assume that they carry implications for education as well. Little has been written, however, about how the specific affordances of these technologies and the kinds of information they allow students to access and create relate to the central purpose of education: learning. What does learning mean in an information-rich environment? What are its characteristics? What kinds of tasks should it involve? What concepts, strategies, attitudes and skills do educators and students need to master if they are to learn effectively and efficiently in such an environment? How can researchers, theorists and practitioners foster the well-founded and widespread development of such key elements of the learning process? This second edition continues these discussions and suggests some tentative answers. Drawing primarily from research and theory in three distinct but related fields: learning theory, instructional systems design and information studies, it presents a way to think about learning that responds directly to the actualities of a world brimming with information. The second edition also includes insights from digital and critical literacies and provides a combination of an updated research and theory base and a collection of instructional scenarios for helping teachers and librarians implement each step of the I LEARN model. The book could be used in courses in teacher preparation, academic librarian preparation and school librarian preparation. **Supporting Transfer Student Success**

Peggy L. Nuhn, Karen F. Kaufmann, 2020-11-06 This research-based book with practical applications teaches academic librarians to support their transfer students effectively at both universities and community colleges, even when transfer students' information literacy needs differ from those of other students. Colleges and universities across the United States serve a large and growing population of transfer students. Current estimates suggest that more than one-third of college students transfer from one institution of higher education to another at least once. At some institutions, transfer students compose up to fifty to sixty percent of the new incoming class. Academic librarians' understanding of the demographics and potential needs of transfer students is essential to supporting their success and mitigating transfer shock. Just as public libraries often bridge gaps between individuals and services, academic libraries can proactively support the often unique needs of transfer students by spearheading textbook affordability initiatives, developing innovative programming and making appropriate referrals to non-library student services. In this practical guide to supporting transfer students, authors Peggy L. Nuhn and Karen F. Kaufmann teach academic librarians how to optimize information literacy instruction, support research, help reduce stress and connect the library to virtual students. They emphasize the importance of establishing partnerships with feeder institutions and other campus departments to best support transfer student success.
