

Guidelines for the Design of Shield Tunnel Lining

Working Group No. 2, International Tunnelling Association

Abstract—These guidelines, prepared by Working Group 2 (Research) of the International Tunnelling Association, are presented in three parts: Part I describes the outline of the procedure of design. Part II presents the detailed design methods. Part III provides references, including examples of design. Because the methods of designing shield tunnel linings vary, the guidelines do not recommend that priority be given to any one method. Rather, this report presents the basic concepts of shield tunnel linings, in order to provide reference and guidance in designing tunnel linings. © 2000 Published by Elsevier Science Ltd. All rights reserved.

Preface

Although these guidelines present the basic concepts of shield tunnel lining, they do not supersede relevant specifications relevant to each country and each project. The aim of the guidelines is to promote advances in the design of shield tunnels in accordance with the objectives of the International Tunnelling Association prescribed in Section II of the Statutes of the ITA (ITA 1976).

Work on the guidelines began at the meeting of ITA Working Group 2 – Research in Amsterdam in 1993. After much study, discussion and investigation, the guidelines were completed in December 1999.

The guidelines consist of three parts:

Part I outlines the shield tunnel design procedure.

Part II presents the detailed design methods.

Part III provides references, including examples of shield tunnel design.

Because there are various competent methods of designing shield tunnel linings, these guidelines give no priority to any specific method. Rather, they introduce design methods generally and widely used throughout the world.

Shield tunnels are usually excavated in soft ground rather than in rock. The parameters of linings, such as dimension and strength of material, are subject not only to ground conditions but also to construction conditions.

The practice of designing tunnel linings requires much experience, practical and theoretical knowledge. It is therefore not expected that these guidelines will cover every point of tunnel lining design, but instead will provide basic knowledge useful to design practitioners. It is hoped that this knowledge

will be continuously improved through progress in tunnelling technology.

As Vice-Animateur of ITA Working Group 2, I wish to acknowledge the important contributions of the following persons: M. Yano Leblais, who led the study as Animateur; Professor Andre Assis and Professor E. Eisenstein, who guided our study as Tutors; working group members Herr Dr. Harald Wagner, Professor Teodor Iltis, Dr. Birger Schmidt, Signor Piergiorgio Grassi, all of whom contributed greatly to the study; and members of Research and Development Committee of the Japan Tunnelling Association, chaired by Professor Toru Kondo, who prepared the draft of the guidelines.

For the International Tunnelling Association,

—YOSHINOBU HIRO TAKANO

Vice-Animateur, ITA Working Group 2,

Part I: Outline of Shield Tunnel Lining Design Procedure

Following the planning works for the tunnel, the lining of a shield tunnel is designed according to the following sequence, as a rule:

1. **Adherence to specification, code or standard.** The tunnel to be constructed should be designed according to the appropriate specification standard, code or standards, which are determined by the persons in charge of the project or decided by discussion between these persons and the designers.
2. **Decision on inner dimension of tunnel.** The inner diameter of the tunnel to be designed should be decided in consideration of the space that is demanded by the functions of the tunnel. This space is determined by:
 - The construction gauge and car gauge, in the case of railway tunnels;

Practical Guide to Rock Tunneling Dean Brox, 2017-04-11 This Practical Guide to Rock Tunneling fills an important void in the literature for a practical guide to the design and construction of tunnels in rock. Practical Guide to Rock Tunneling takes the reader through all the critical steps of the design and construction for rock tunnels starting from geotechnical site investigations through to construction supervision. The guide provides suggestions and recommendations for practitioners on special topics of laboratory testing, durability of rock and acceptance for unlined water conveyance tunnels, overstressing or deep and long tunnels, risk based evaluation of excavation methods, contract strategies and post construction inspections. Key considerations and lessons learned from selected case projects are presented based on the author's extensive international experience of over 30 years and 1000 km of tunneling for civil hydropower and mining infrastructure including some of the most recognized projects in the world to date. Instead of revisiting all theory and concepts that can be found in other sources, this book contains the hard learned lessons from the author's experience in the field of Rock Tunneling gathered over 30 years of service.

Handbook of Precast Segmental Tunnel Lining Systems Varya Nasri, David Klug, Brian Fulcher, James A. Morrison, 2024-07-31 This comprehensive handbook covers all aspects of design, production and construction of precast concrete tunnel segmental lining with the best practices in the field included in one book for the first time. New and current design methods and quantitative analyses are considered in line with ACI and ASTM codes as well as a full selection of global standards for the reliable design of the product and all components. Also incorporated are new applications of science and technology such as new admixtures and the latest manufacturing processes and precisions such as tight dimensional controls and high repeatability cycles. With detailed guidance from world leading practitioners, this is the definitive international technical and practical manual on these linings forming a one stop reference for tunnel engineers and an invaluable resource for advanced students in civil, mechanical and mining engineering.
