Trettin, W.M. Aust, Joe Wisniewski, 2012-12-06 The early 1990 s marked an environmental watershed for our country Under two federal administrations significant environmental legislative regulatory and institutional changes took place which affected our Nation s wetland resources In just a few years we have seen rapid evolution in the way in which we view wetlands with more emphasis on specific wetland types and the geographic provinces in which they occur This Southern Appalachian Man and the Biosphere SAMAB conference on Wetland Ecology Management and Conservation represents just one example of our desire to understand wetlands in non coastal regions of the southern United States The backdrop to this conference was one where the government universities and private sector have come together to create a broader and more sophisticated understanding of environmental stewardship for our water resources especially wetlands Although enforcement of environmental legislation by federal and state government agencies limited by manpower shortages budgetary constraints and undermined by weak enforcement remains strong as measured by world standards the realization that environmental degradation of wetlands is likely to get much worse necessitates a greater commitment and increased resource allocation for wetland protection and management These continued pressures on the wetland resource will create substantial opportunities for the application of environmentally sound technologies and interdisciplinary modeling teams to keep abreast of the factors influencing wetland integrity and function in the last half of the 1990 s Conservation of Saline Wetland Ecosystems Laxmi Kant Sharma, Rajashree Naik, 2024-09-20 This authored book is a comprehensive collection of information on saline wetland ecosystems focusing on the application of advanced technologies like LiDAR UAVs and artificial intelligence for the conservation of these critical ecosystems Saline lakes known for their extreme conditions play a vital role in global water systems This book investigates how advanced tools such as airborne and spaceborne multispectral hyperspectral sensors light detection and ranging LiDAR Unmanned Aircraft Vehicles UAVs and spectroradiometers combined with AI and the Internet of Things IoT can be harnessed for effective restoration and conservation efforts The book is enriched with detailed infographics flowcharts graphs and tables making complex information accessible and engaging A dedicated section of case studies provides practical examples that highlight the real world impact of the discussed technologies This book will be of interest to academicians scientists ecologists hydrologists limnologists earth data scientists ecosystem conservationists environmental planners engineers policymakers geologists data analysts climate scientists and remote sensing and GIS specialists It also serves as valuable reading material for undergraduate and graduate students of ecology wetlands and earth and environmental sciences Mid-Atlantic Freshwater Wetlands: Advances in Wetlands Science, Management, Policy, and Practice Robert P. Brooks, Denise Heller Wardrop, 2013-01-25 The lands and waters of the Mid Atlantic Region MAR have changed significantly since before the 16th century when the Susquehannock lived in the area

Much has changed since Captain John Smith penetrated the estuaries and rivers during the early 17th century since the surveying of the Mason Dixon Line to settle border disputes among Maryland Pennsylvania and Delaware during the middle of the 18th century and since J Thomas Scharf described the physiographic setting of Baltimore County in the late 19th century As early as 1881 Scharf provides us with an assessment of the condition of the aquatic ecosystems of the region albeit in narrative form and already changes are taking place the conversion of forests to fields the founding of towns and cities and the depletion of natural resources We have always conducted our work with the premise that man is part of and not apart from this ecosystem and landscape This premise and the historical changes in our landscape provide the foundation for our overarching research question how do human activities impact the functioning of aquatic ecosystems and the ecosystem services that they provide and how can we optimize this relationship

**Stormwater Management for Transportation Facilities** Shaw L. Yu,1993 This synthesis will be of interest to highway design engineers maintenance engineers environmental personnel administrators and others responsible for the design operation and maintenance of stormwater management for highways and ancillary facilities Information is presented on the basic hydrology needed to assess stormwater impacts and on the effectiveness of stormwater management techniques Designers of highway facilities must consider stormwater management requirements within the context of both localized runoff impacts as well as downstream effects of runoff This report of the Transportation Research Board describes the management of both stormwater quantity and stormwater quality Stormwater quantity includes an overview of methods of estimating runoff and management control practices Stormwater quality management includes discussions of the most prevalent pollutants and best management practices BMP to minimize pollutants from transportation facilities Various types of structural and non structural methods are described including their design considerations and efficiencies Several stormwater management models are described with special concern for highway applications Highlights from the 1990 National Pollutant Discharge Elimination System NPDES permits are presented
