Power Plant Instrumentation and Control Handbook Swapan Basu, Ajay

Kumar Debnath, 2014-11-04 The book discusses instrumentation and control in modern fossil fuel power plants with an emphasis on selecting the most appropriate systems subject to constraints engineers have for their projects. It provides all the plant process and design details including specification sheets and standards currently followed in the plant. Among the unique features of the book are the inclusion of control loop strategies and BMS FSSS step by step logic coverage of analytical instruments and technologies for pollution and energy savings and coverage of the trends toward field bus systems and integration of subsystems into one network with the help of embedded controllers and OPC interfaces. The book includes comprehensive listings of operating values and ranges of parameters for temperature pressure flow level etc of a typical 250 500 MW thermal power plant. Appropriate for project engineers as well as instrumentation control engineers, the book also includes tables, charts and figures from real life projects around the world. Covers systems in use in a wide range of power plants: conventional thermal power plants, combined cycle plants, supercritical plants and once through boilers. Presents practical design aspects and current trends in instrumentation. Discusses why and how to change control strategies when systems are updated/changed. Provides instrumentation selection techniques based on operating parameters. Spec sheets are included for each type of instrument. Consistent with current professional practice in North America, Europe and India.

Mathematical Problems in Data Science Li M. Chen, Zhixun Su, Bo Jiang, 2015-12-15 This book describes current

problems in data science and Big Data. Key topics are data classification, Graph Cut, the Laplacian Matrix, Google Page Rank, efficient algorithms, hardness of problems, different types of big data, geometric data structures, topological data processing and various learning methods. For unsolved problems such as incomplete data relation and reconstruction, the book includes possible solutions and both statistical and computational methods for data analysis. Initial chapters focus on exploring the properties of incomplete data sets and partial connectedness among data points or data sets. Discussions also cover the completion problem of Netflix matrix, machine learning method on massive data sets, image segmentation and video search. This book introduces software tools for data science and Big Data such as MapReduce, Hadoop and Spark. This book contains three parts. The first part explores the fundamental tools of data science. It includes basic graph theoretical methods, statistical and AI methods for massive data sets. In the second part, chapters focus on the procedural treatment of data science problems including machine learning methods, mathematical image and video processing, topological data analysis and statistical methods. The final section provides case studies on special topics in variational learning, manifold learning, business and financial data recovery, geometric search and computing models. Mathematical Problems in Data Science is a valuable resource for researchers and professionals working in data science, information systems and networks. Advanced level students studying computer science, electrical engineering and mathematics will also find the content helpful. **United**
