Humble Analysis Clinton J. Andrews, 2002-05-30 Joint fact finding is a cooperative venture and communication among the participants is critical to success Analysts have begun to recognize this and have started to adjust their craft to reflect the communicative character of their work Non analysts usually judge experts opinions by their value effectiveness and legitimacy rather than soundness of the conclusions Accordingly experts must recognize the importance of these non scientific criteria and learn to communicate better with their non expert colleagues Practically this means explaining the rationale and implications behind their findings in an easily digestible way Andrews uses real cases to illustrate his argument that analysts should marry process to analysis spread information reason inductively broaden their analytic scope put analytic results into lay terms and constantly seek out feedback on their work Technical specialists who perform analysis in public settings can turn to Andrews s book for ideas about how to do their jobs more effectively Scholars interested in the connection between expertise and the process of social

learning will find his case study approach useful Beginning with an analysis of the motivations and concepts at work in the process of joint fact finding Andrews assesses the challenges analysts face from those who hire them and from their non expert colleagues He then illustrates his remarks with case studies of projects that have failed and succeeded The book concludes by summing up the mistakes learned and elements that make for successful joint fact finding

Pollution Andreas Stohl, 2004-06-08 Transboundary transport of air pollution has been a topic of scientific research for several decades and has also been addressed already by environmental policies. However, the importance of air pollution transport on the largest intercontinental scales has been recognized only recently. It was soon found that the meteorological and chemical processes involved in intercontinental pollution transport are distinctly different from those occurring during regional scale transport and thus new scientific methodologies are required for their study. In this book leading scientists review the current state of knowledge in this emerging field of research, providing the reader with a process understanding of global scale transport and its influence on the atmosphere's chemical composition. Long range transport of anthropogenic pollution is contrasted with that of pollution produced by natural processes such as dust storms or forest fires. Furthermore, the prospects for international management of intercontinental transport of anthropogenic pollution are discussed.
