

Did you know?  
**FOSSIL FUELS**

The costs of solar  
power decreased by  
90% from 2009-2019

Fossil fuels release  
greenhouse gases,  
trapping heat in our  
atmosphere and leading  
to climate change

As sea levels rise due to  
global warming, more  
natural disasters such  
as flooding and  
hurricanes occur.

Extracting fossil fuels comes  
with many environmental risks,  
such as the Deepwater Horizon  
oil spill which killed hundreds of  
thousands of animals

**Climate, from Fear to Facts** Constantin Cranganu,2024-03-07 This book contains reflections about climate change an intrinsic reality of our planet s history over the past 4 6 billion years including both natural and anthropogenic variations More recently the phrase climate change has become a euphemism for carbon dioxide emissions While focusing on CO2 emissions is crucial for understanding climate change solely using this term in scientific discussions may lead to overlooking other complex factors contributing among other things to extreme weather events potentially affecting the quality of evidence analysis The shift towards using climate change interchangeably with carbon dioxide emissions within scientific circles while highlighting a key driver necessitates ensuring comprehensive discussions that encompass the diverse evidence related to all climate sub systems Therefore using the phrase like a changing climate opens a bigger umbrella that facilitates covering multiple and complex climate manifestations The book will be useful to students researchers and policy makers working and studying in the vast and often contentious landscape of climate change debates      Information Circular ,1977
