**Fair Allocation** H. Peyton Young, 1985-12-31 This collection of six papers provides a valuable source of material on the real world problem of allocating objects among competing claimants The examples given show how mathematics particularly the axiomatic method can be applied to give insight into complex social problems Originally presented as an AMS Short Course these papers could serve as a suitable text for courses touching on game theory decision sciences economics or quantitative political science Most of the material is accessible to the mathematically mature undergraduate with a background in advanced calculus and algebra Each article surveys the recent literature and includes statements and sketches of proofs as well as unsolved problems which should excite student curiosity The articles analyze the question of fair allocation via six examples the apportionment of political representation the measurement of income inequality the allocation of joint costs the levying of taxes the design of voting laws and the framing of auction procedures In each of these examples fairness has a somewhat different significance but common axiomatic threads reveal broad underlying principles Each of the topics is concerned with norms of comparative equity for evaluating allocations or with standards of procedures for effecting them it is this focus on normative properties which suggests that a mathematical analysis is appropriate Though game theory provides a useful tool in many of these allocation problems the emphasis here is on standards rather than strategy and equity rather than rationality an approach which more accurately mirrors real world social problems **Environment & Planning**

**A.**, 1991 **Equity** Hobart Peyton Young, 2020-06-16 Governments and institutions perhaps even more than markets determine who gets what in our society They make the crucial choices about who pays the taxes who gets into college who gets medical care who gets drafted where the hazardous waste dump is sited and how much we pay for public services Debate about these issues inevitably centers on the question of whether the solution is fair In this book H Peyton Young offers a systematic explanation of what we mean by fairness in distributing public resources and burdens and applies the theory to actual cases **Distributional Aspects of Human Fertility** Wolfgang Lutz, 1989 Basandose en datos proporcionados por los informes mundiales sobre fertilidad world fertility surveys correspondientes a los paises desarrollados y en desarrollo se estudia la distribucion de las tasas de fertilidad Se contemplan aspectos tales como los efectos del control de natalidad de algunas dimensiones demograficas periodo de tiempo duracion de la pareja o matrimonio edad La obra consta de 4 capitulos 1 la dimension demografica de la fertilidad 2 cuantificacion del ritmo de fertilidad Un estudio comparativo de 55 paises 3 analisis de las metodologias para la estimacion del numero de nacimientos del periodo fertil 4 la concentracion de nacimientos y epilogo Consecuencias de la fertilidad la distribucion y concentracion Incluye graficos tablas con datos estadisticos y bibliografia Operations Research and Enterprise Systems Greg H. Parlier, Federico Liberatore, Marc Demange, 2018-06-28 This book constitutes revised selected papers from the 6th International Conference on Operations Research and Enterprise Systems ICORES 2017 held in Porto Portugal in February 2017 The 15 papers

presented in this volume were carefully reviewed and selected from a total of 90 submissions They are organized in topical sections named methodologies and technologies and applications *The Measurement of Segregation in the Labor Force* Yves Flückiger, Jacques Silber, 2012-12-06 When considering labor market inequality across different demographic groups in society it is natural for most individuals to think of discrimination as the most likely explanation Since the pioneering work of University of Chicago economist and Nobel Laureate Gary Becker there has been an abundance of both theoretical and empirical analysis on the issue of discrimination What economists and other social scientists have learned is that the measurement of discrimination has proven to be far more challenging than anyone could have imagined There is of course the technology of measurement that has to be addressed but there is also the related matter of how to define discrimination Another University of Chicago economist and Nobel Laureate Milton Friedman cautioned against overlooking the distinction between equality of outcomes and equality of opportunity The present book is a tour de force on the topic of segregation in the labor force Segregation is a concept that is related to discrimination but it is not necessarily the same as discrimination Segregation can be a mechanism for societal enforcement of discrimination but it can also arise as the result of voluntary choices related to differences in preferences and household division of labor The authors offer a counterweight to the traditional emphasis on wage discrimination over segregation and labor market segmentation The subject is thoroughly addressed on both theoretical and empirical grounds with special emphasis on gender segregation in the Swiss labor market

*Introduction to the Theory of Cooperative Games* Bezalel Peleg, Peter Sudhölter, 2007-08-15 This book systematically presents the main solutions of cooperative games the core bargaining set kernel nucleolus and the Shapley value of TU games as well as the core the Shapley value and the ordinal bargaining set of NTU games The authors devote a separate chapter to each solution wherein they study its properties in full detail In addition important variants are defined or even intensively analyzed *Working Papers in Economics and Econometrics* Australian National University. **Earthquake lessons from China** Chen, Kevin Z, Zhang, Qiang, Hsu, Claire, 2016-04-13 The Wenchuan County earthquake of 2008 was the most severe earthquake as measured in sheer magnitude in the history of the People's Republic of China Killing almost 90 000 people and creating economic losses of 845 billion yuan US 132 billion the earthquake also elicited a vigorous response from various government agencies private businesses and nongovernmental organizations NGOs The ways these actors responses to the earthquake proved effective in distributing appropriate aid to those in need and the areas where the actors earthquake response needs to be improved are discussed and analyzed in *Earthquake Lessons from China Coping and Rebuilding Strategies* The authors identify three earthquake responses that proved helpful to earthquake affected communities the use of a pair wise aid policy in which a donor province or city is assigned to give aid to a particular earthquake affected area expanded NGO and volunteer involvement and various kinds of public financial aid to earthquake affected households They also pinpoint areas that need

further work public aid specifically for home reconstruction which has been inadequate and the capacity of local communities to manage their own disaster responses which is too low Perhaps most important the authors found that the high levels of NGO and volunteer involvement in disaster response should be expanded and sustained beyond what they were in the aftermath of the 2008 earthquake The authors believe that increased nonpublic sector involvement can not only improve the level of response to natural disasters but also foster a robust civil society and grassroots democracy in China **The**
