Inspiration in Science and Religion Michael Fuller,2012-12-04 All sorts of things may be described as inspired a mathematical theorem a work of art a goal at football a short cut home from the shops What lies behind all these Where does inspiration come from Does it derive from a source external to the person inspired or is it the end result of sheer hard work or is it purely serendipitous Within the fields of science and religion the word inspiration might be thought to carry very

different connotations But is there a degree of overlap If scientists and religious thinkers alike may acknowledge the power of inspiration do we have here an important area of convergence between two important areas of human discourse which are all too often believed to be opposed to one another These were some of the issues considered at the 2011 conference of the Science and Religion Forum held at Cumberland Lodge near Windsor This book presents papers from that conference including contributions from such major thinkers as Lord Winston Linda Woodhead and John Hedley Brooke among other leading scientific and theological practitioners Their wide ranging studies and very diverse conclusions will be of interest to a wide readership

Animals, Ethics and Trade Joyce D'Silva, Jacky Turner, 2012-05-16

Modern urban life cuts us off from direct connection with the animal world yet daily the lives of millions of animals are affected by what we consume and wear and what we trade in The use of animals for food labour and pleasure pursuits has long been justified with the assumption that unlike humans animals aren't fully sentient beings In recent years however science has revealed an astonishing array of complex animal behaviour and scientists and policy makers now accept that the animals we make use of are indeed conscious with preferences and intentions The implications for our culture of factory farming fast food and rainforest liquidation are staggering In this powerful book internationally renowned experts on animal behaviour and agriculture such as Jane Goodall Tim Lang and Vandana Shiva are brought together with ethicists religious scholars international industry and regulators for the first time to debate these critical issues and tackle the profound implications of animal sentience The first sections discuss scientific and ethical perspectives on the consciousness emotions and mental abilities of animals Later sections address how human activities such as science law religion farming food production trade development and education respect or ignore animals sentience and welfare and review the options for changes in our policies our practices and our thinking The result is nothing less than a stark and necessary look into the heart of humanity and the ethics that govern our animal powered society

The Place of Ethics in Science Education Amanda McCrory, Michael J. Reiss, 2023-08-24

Science education particularly school science education has long had an uneasy relationship with ethics being unsure whether to embrace ethics or leave it to others In this book the authors argue that while the methods of science and of ethics are very different ethics plays a key role in how science is undertaken and used And so ethics has a central place in science education whether we are talking of school science education for students of all ages or the informal science education that takes place in through internet books magazines TV and radio or in places such as hospitals and zoos Written for science educators based in schools and elsewhere the authors make no assumptions that the reader has any knowledge of ethics beyond the background understandings of morality that virtually all of us have Empowered with the knowledge shared in this book readers will feel confident about the place that ethics has in science

education The authors provide a rich array of examples as to how science education both in school and out of school and for all ages can be enhanced through including teaching about ethics

Teaching about Scientific Origins Leslie Sandra Jones, Michael Jonathan Reiss, 2007 Persistent resistance to the teaching of evolution has so drastically impacted science curricula that many students finish school without a basic understanding of a theory that is a fundamental component of scientific literacy This evolution creationism controversy has crippled biological education in the United States and has begun to spread to other parts of the world This book takes an educational point of view that respects both the teaching of evolution and religious beliefs Authors from different academic traditions contribute to a collection of perspectives that begin to dismantle the notion that religion and science are necessarily incompatible

Science Fiction and The Abolition of Man Mark J. Boone, Kevin C. Neece, 2016-12-13 The Abolition of Man C S Lewis's masterpiece in ethics and the philosophy of science warns of the danger of combining modern moral skepticism with the technological pursuit of human desires The end result is the final destruction of human nature From Brave New World to Star Trek from steampunk to starships science fiction film has considered from nearly every conceivable angle the same nexus of morality technology and humanity of which C S Lewis wrote As a result science fiction film has unintentionally given us stunning depictions of Lewis's terrifying vision of the future In Science Fiction Film and the Abolition of Man scholars of religion philosophy literature and film explore the connections between sci fi film and the three parts of Lewis's book how sci fi portrays Men without Chests incapable of responding properly to moral good how it teaches the Tao or The Way and how it portrays The Abolition of Man

Beyond Cartesian Dualism Steve Alsop, 2006-02-15 There is surprisingly little known about affect in science education Despite periodic forays into monitoring students attitudes toward science the effect of affect is too often overlooked Beyond Cartesian Dualism gathers together contemporary theorizing in this axiomatic area In fourteen chapters senior scholars of international standing use their knowledge of the literature and empirical data to model the relationship between cognition and affect in science education Their revealing discussions are grounded in a broad range of educational contexts including school classrooms universities science centres travelling exhibits and refugee camps and explore an array of far reaching questions What is known about science teachers and students emotions How do emotions mediate and moderate instruction How might science education promote psychological resilience How might educators engage affect as a way of challenging existing inequalities and practices This book will be an invaluable resource for anybody interested in science education research and more generally in research on teaching learning and affect It offers educators and researchers a challenge to recognize the mutually constitutive nature of cognition and affect

Developing Scientific Literacy: Using News Media In The Classroom Jarman, Ruth, McClune, Billy, 2007-03-01 Developing Scientific Literacy addresses the gap of the relevance of science in everyday life offering a much needed framework for teachers wishing to explore science in the media in secondary schools or colleges

International Handbook of Research in History, Philosophy and Science

Teaching Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook. Gerald Holton, Physics Department, Harvard University. This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community. Fabio Bevilacqua, Physics Department, University of Pavia. [Natural History Dioramas - Traditional Exhibits for Current Educational Themes](#) Annette

Scheersoi, Sue Dale Tunnicliffe, 2018-11-14 This book presents the history of natural history dioramas in museums, their building and science learning aspects as well as current developments and their place in the visitor experience. From the early 1900s, with the passage of time and changes in cultural norms in societies, this genre of exhibits evolved in response to the changes in entertainment expectations and expressed needs of museum visitors. The challenge has always been to provide meaningful, relevant experiences to visitors, and this is still the aim today. Dioramas are also increasingly valued as learning tools. Contributions in this book specifically focus on their educational potential. In practice, dioramas are used by a wide range of educational practitioners to assist learners in developing and understanding specific concepts such as climate change, evolution or conservation issues. In this learning process, dioramas not only contribute to scientific understanding and cultural awareness but also reconnect wide audiences to the natural world and thereby contribute to the well-being of societies. In the simultaneously published book *Natural History Dioramas: Traditional Exhibits for Current Educational Themes*, Socio-cultural Aspects, the editors focus on socio-cultural issues and the potential of using dioramas to engage various audiences with and in contemporary debates and big issues which society and the natural environment are facing.
