graphical method of solution to the more advanced simplex tableau method Most of the world even those technically trained can get along very well by seeing a few illustrations of simple linear programming problems solved graphically followed by instruction in the use of computer software for solving real world problems But there needs to be a coterie of initiates who understand the process well enough to explain it to others to know what the pitfalls ramifications and special cases are and to provide further developments I have used an informal narrative style with a number of worked out examples and detailed explanations to put the topic within reach

Computing Tools for Modeling, Optimization and Simulation Manuel Laguna, José Luis González-Velarde, 1999-11-30 Computing Tools for Modeling Optimization and Simulation reflects the need for preserving the marriage between operations research and computing in order to create more efficient and powerful software tools in the years ahead The 17 papers included in this volume were carefully selected to cover a wide range of topics related to the interface between operations research and computer science The volume includes the now perennial applications of metaheuristics such as genetic algorithms scatter search and tabu search as well as research on global optimization knowledge management software maintainability and object oriented modeling These topics reflect the complexity and variety of the problems that current and future software tools must be capable of tackling The OR CS interface is frequently at the core of successful applications and the development of new methodologies making the research in this book a relevant reference in the future The editors goal for this book has been to increase the interest in the interface of computer science and operations research Both researchers and practitioners will benefit from this book The tutorial papers may spark the interest of practitioners for developing and applying new techniques to complex problems In addition the book includes papers that explore new angles of well established methods for problems in the area of nonlinear optimization and mixed integer programming which seasoned researchers in these fields may find fascinating
