Linguistic Instruments In Requirements Engineering:

Linguistic Instruments in Requirements Engineering J. F. M. Burg, 1997 **Formal Ontology in Information Systems** Nicola Guarino, 1998

Research on ontology is becoming increasingly widespread in the computer science community. While this term has been rather confined to the philosophical sphere in the past, it is now gaining a specific role in areas such as Artificial Intelligence, Computational Linguistics, and Databases. Its importance has been recognized in fields as diverse as knowledge engineering, knowledge representation, qualitative modeling, language engineering, database design, information integration, object oriented analysis, information retrieval, and extraction, knowledge management, and organization, agent based systems design. Current applications areas are disparate, including enterprise integration, natural language translation, medicine, mechanical engineering, electronic commerce, geographic information systems, legal information systems, and biological information systems. Various workshops addressing the engineering aspects of ontology have been held in the recent years. However, ontology by its very nature ought to be a unifying discipline. Insights in this field have potential impact on the whole area of information systems, taking this term in its broadest sense, as testified by the interest recently shown by international standards organizations. In order to provide a solid general foundation for this work, it is therefore important to focus on the common scientific principles and open problems arising from current tools, methodologies, and applications of ontology.

Aspect-Oriented Requirements Engineering Ana Moreira, Ruzanna Chitchyan, João Araújo, Awais Rashid, 2013-11-19

Broadly scoped requirements such as security, privacy, and response time are a major source of complexity in modern software systems. This is due to their tangled interrelationships with and effects on other requirements. Aspect Oriented Requirements Engineering (AORE) aims to facilitate modularisation of such broadly scoped requirements so that software developers are able to reason about them in isolation, one at a time. AORE also captures these interrelationships and effects in well defined composition specifications, and in so doing, exposes the causes for potential conflicts, trade offs, and roots for the key early architectural decisions. Over the last decade, significant work has been carried out in the field of AORE. With this book, the editors aim to provide a consolidated overview of these efforts and results. The individual contributions discuss how aspects can be identified, represented, composed, and reasoned about, as well as how they are used in specific domains and in industry. Thus, the book does not present one particular AORE approach but conveys a broad understanding of the aspect oriented perspective on requirements engineering. The chapters are organized into five sections: concern identification in requirements, concern modelling, and composition, domain specific use of AORE, aspect interactions, and AORE in industry. This book provides readers with the most comprehensive coverage of AORE and the capabilities it offers to those grappling with the complexity arising from broadly scoped requirements, a phenomenon that is without doubt universal across software systems. Software engineers and related professionals in industry, as well as advanced undergraduate and post graduate students and researchers, will benefit from these comprehensive descriptions and

the industrial case studies **Requirements Engineering: Foundation for Software Quality** Roel Wieringa, Anne Persson, 2010-06-16 This volume compiles the papers accepted for presentation at the 16th Working Conference on Requirements Engineering Foundation for Software Quality REFSQ 2010 held in Essen during June 30 and July 1 2 2010 Since 1994 when the first REFSQ took place requirements engineering RE has never ceased to be a dominant factor influencing the quality of software systems and services Initially started as a workshop the REFSQ working conference series has now established itself as one of the leading international forums to discuss RE in its many relations to quality It seeks reports of novel ideas and techniques that enhance the quality of RE products and processes as well as reflections on current research and industrial RE practices One of the most appreciated characteristics of REFSQ is that of being a highly interactive and structured event REFSQ 2010 was no exception to this tradition In all we received a healthy 57 submissions After all submissions had been fully assessed by three independent reviewers and went through electronic discussions the Program Committee met and finally selected 15 top quality full papers 13 research papers and 2 experience reports and 7 short papers resulting in an acceptance rate of 38 % The work presented at REFSQ 2009 continues to have a strong anchoring in practice with empirical investigations spanning over a wide range of application domains Situational Method Engineering: Fundamentals and Experiences Jolita Ralyté, Sjaak Brinkkemper, Brian Henderson-Sellers, 2007-09-10 Over the last decade Method Engineering defined as the engineering discipline to design construct and adapt methods including supportive tools has emerged as the research and application area for using methods for systems development This book contains the papers from the IFIP Working Group 8.1 conference on Situational Method Engineering Requirements Engineering: Foundation for Software Quality Daniel M. Berry, Xavier Franch, 2011-03-16 This book constitutes the refereed proceedings of the 17th International Working Conference on Requirements Engineering Foundation for Software Quality REFSQ 2011 held in Essen Germany in March 2011 The 10 revised full papers and the 9 short papers presented were carefully reviewed and selected from 59 submissions The papers are organized in seven topical sections on security and sustainability process improvement and requirements in context elicitation models services embedded and real time systems and prioritization and traceability **Natural Language Processing and Information Systems** Farid Meziane, Elizabeth Métais, 2004-07-28 Welcome to NLDB04 the Ninth International Conference on the Application of Natural Language to Information Systems held at the University of Salford UK during June 23 25 2004 NLDB04 follows on the success of previous conferences held since 1995 Early conferences then known as Application of Natural Language to Databases hence the acronym NLDB were used as a forum to discuss and disseminate research on the integration of natural language and databases and were mainly concerned with natural language based queries database modelling and user interfaces that facilitate access to information The conference has since moved to encompass all aspects of Information Systems and Software Engineering Indeed the use of natural language in systems modelling has greatly improved the development process and benefited both

developers and users at all stages of the software development process The latest developments in the field of natural language and the emergence of new technologies has seen a shift towards storage of large semantic electronic dictionaries their exploitation and the advent of what is now known as the semantic web Information extraction and retrieval document and content management ontology development and management and natural language conversational systems are becoming regular tracks in the last NLDB conferences NLDB04 has seen a 50% increase in the number of submissions and has established itself as one of the leading conferences in the area of applying natural language to information systems in its broader sense Natural Language Processing and Information Systems Zoubida Kedad,Nadira Lammari,Elisabeth Métais,Farid Meziane,Yacine Rezgui,2007-08-15 This book constitutes the refereed proceedings of the 12th International Conference on Applications of Natural Language to Information Systems NLDB 2007 held in Paris France in June 2007 It covers natural language for database query processing email management semantic annotation text clustering ontology engineering natural language for information system design information retrieval systems and natural language processing techniques

Seminal Contributions to Information Systems Engineering Janis Bubenko,John Krogstie,Oscar Pastor,Barbara Pernici,Colette Rolland,Arne Sølvberg,2013-06-13 In 2013 the International Conference on Advance Information Systems Engineering CAiSE turns 25 Initially launched in 1989 for all these years the conference has provided a broad forum for researchers working in the area of Information Systems Engineering To reflect on the work done so far and to examine prospects for future work the CAiSE Steering Committee decided to present a selection of seminal papers published for the conference during these years and to ask their authors all prominent researchers in the field to comment on their work and how it has developed over the years The scope of the papers selected covers a broad range of topics related to modeling and designing information systems collecting and managing requirements and with special attention to how information systems are engineered towards their final development and deployment as software components With this approach the book provides not only a historical analysis on how information systems engineering evolved over the years but also a fascinating social network analysis of the research community Additionally many inspiring ideas for future research and new perspectives in this area are sparked by the intriguing comments of the renowned authors **Engineering and Managing Software Requirements** Aybüke Aurum,Claes Wohlin,2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered analyzed documented and managed throughout their complete lifecycle Traditionally it has been concerned with technical goals for functions of and constraints on software systems Aurum and Wohlin however argue that it is no longer appropriate for software systems professionals to focus only on functional and non functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit Instead they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders processes and software systems which would in turn give rise to more appropriate techniques and

higher quality systems Following an introductory chapter that provides an exploration of key issues in requirements engineering the book is organized in three parts Part 1 presents surveys of state of the art requirements engineering process research along with critical assessments of existing models frameworks and techniques Part 2 addresses key areas in requirements engineering such as market driven requirements engineering goal modeling requirements ambiguity and others Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners not only in software engineering but also in other disciplines such as business process engineering and management science
