Electronic Design Automation Frameworks:

Electronic Design Automation Frameworks Franz J. Rammig, Flavio Wagner, 2013-04-17 Design frameworks have become an important infrastructure for building complex design systems *Electronic Design Automation Frameworks* presents a state of the art review of the latest research results covering this topic results which are also of value for other design frameworks The book contains the selected proceedings of the Fourth International Working Conference on Electronic Design Frameworks organized by the International Federation for Information Processing and held in Gramado Brazil in November 1994

Electronic Design Automation Frameworks Tom Rhyne, 1992 Many of the advances achieved in framework technology during the last five years are reported in this volume However despite acknowledged developments and an enormous investment by the Computer Aided Design CAD vendor industry and others commercial framework products have been slow to appear on the market Further those which have appeared have largely failed to meet original targets whether in terms of scope or performance or both Reaching a consensus on new international standards has been a painfully slow process with rapid advances in technology often rendering new standards out of date even before their eventual appearance A motivation for agreement on technical issues not yet fully understood or researched will be vital if a commercial basis to underpin future development is to be achieved It is hoped this book will stimulate interchange between researchers developers and users so that practical progress can be made backed by the strong support of interested industries

Electronic Design Automation Frameworks F. J. Rammig, Ron Waxman, 1991 During the last decade the field of electronic design automation has changed from a small industry offering a random sampling of commercial and academic design automation tools to a significant industry comprising offerings ranging from individual tools to total design systems all based upon a set of emerging standards Workers in electronic design automation are active in the development of integrated design environments and therefore in the development of frameworks Frameworks for electronic design automation are rather similar to those for mechanical or software engineering however the class of tools may differ resulting in differing specific requirements for the services to be offered The present book documents the results of the 2nd Workshop on electronic design automation frameworks The question of standardization is of special interest within the book especially as related to VHDL EDIF PDES and CFI Also included are discussions of the role of specialized languages for specific environments and how the user community can help standards to evolve

Cad Frameworks Pieter van der Wolf, 2012-12-06

Since the early 1980s CAD frameworks have received a great deal of attention both in the research community and in the commercial arena. It is generally agreed that CAD framework technology promises much advanced CAD frameworks can turn collections of individual tools into effective and user friendly design environments. But how can this promise be fulfilled? CAD Frameworks Principles and Architecture describes the design and construction of CAD frameworks. It presents principles for building integrated design environments and shows how a CAD framework can be based on these principles. It derives the architecture of a CAD framework in a systematic way using well defined primitives for representation. This architecture defines how the many different framework sub topics ranging from concurrency control to design flow management relate to each other and come together into an overall system. The origin of this work is the research and development performed in the context of the Nelsis CAD Framework which has been a working system for well over eight years gaining functionality while evolving from one release to the next. The principles and concepts presented in this book have been field tested in the Nelsis CAD Framework. CAD Frameworks Principles and Architecture is primarily intended for EDA professionals both in industry and in academia but is also valuable outside the domain of electronic design. Many of the principles and concepts presented are also applicable to other design oriented application domains such as mechanical design or computer aided software engineering CASE. It is thus a valuable reference for all those involved in computer aided design.

Jean Mermet,2012-12-06 The second half of this century will remain as the era of proliferation of electronic computers They did exist before but they were mechanical During next century they may perform other mutations to become optical or molecular or even biological Actually all these aspects are only fancy dresses put on mathematical machines This was always recognized to be true in the domain of software where machine or high level languages are more or less rigorous but immaterial variations of the universally accepted mathematical language aimed at specifying elementary operations functions algorithms and processes But even a mathematical machine needs a physical support and this is what hardware is all about The invention of hardware description languages HDL s in the early 60 s was an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to the moment when no more technology independent decisions can be taken It was also an answer to the continuous exponential growth of complexity of systems to be designed This problem is common to hardware and software and may explain why the syntax of hardware description languages has followed with a reasonable delay of ten years the evolution of the programming languages at the end of the 60 s they were Algol like a decade later Pascal like and now they are C or ADA like They have also integrated the new concepts of advanced software specification languages **Discrete Event Modeling and Simulation Technologies** Hessam S.

Sarjoughian,Francois E. Cellier,2013-03-09 The initial ideas behind this edited volume started in spring of 1998 some two years before the sixtieth birthday of Bernard P Zeigler The idea was to bring together distinguished researchers colleagues and former students of Professor Zeigler to present their latest findings at the AIS 2000 conference During the spring of 1999 the initial ideas evolved into creating a volume of articles surrounding seminal concepts pertaining to modeling and

simulation as proposed developed and advocated by Professor Zeigler throughout his scientific career Also included would be articles describing progress covering related aspects of software engineering and artificial intelligence As this volume is emphasizing concepts and ideas spawned by the work of Bernard P Zeigler it is most appropriate to offer a biographical sketch of his scientific life thus putting into a historical perspective the contributions presented in this volume as well as new research directions that may lie ahead Bernard P Zeigler was born March 5 1940 in Montreal Quebec Canada where he obtained his bachelor s degree in engineering physics in 1962 from McGill University Two years later having completed his MS degree in electrical engineering at the Massachusetts Institute of Technology he spent a year at the National Research Council in Ottawa Returning to academia he became a Ph D student in computer and communication sciences at the University of Michigan Ann Arbor

Database Systems for Advanced Applications '97 Rodney Topor, Katsumi Tanaka, 1997 This volume contains the proceedings of the Fifth International Conference on Database Systems for Advanced Applications DASFAA 97 DASFAA 97 focused on advanced database technologies and their applications The 55 papers in this volume cover a wide range of areas in the field of database systems and applications including the rapidly emerging areas of the Internet multimedia and document database systems and should be of great interest to all database system researchers and developers and practitioners

The Synthesis Approach to Digital System Design Petra Michel, Ulrich Lauther, Peter Duzy, 2012-12-06 Over the past decade there has been a dramatic change in the role played by design automation for electronic systems Ten years ago integrated circuit IC designers were content to use the computer for circuit logic and limited amounts of high level simulation as well as for capturing the digitized mask layouts used for IC manufacture The tools were only aids to design the designer could always find a way to implement the chip or

board manually if the tools failed or if they did not give acceptable results Today however design technology plays an indispensable role in the design of electronic systems and is critical to achieving time to market cost and performance targets In less than ten years designers have come to rely on automatic or semi automatic CAD systems for the physical design of complex ICs containing over a million transistors In the past three years practical logic synthesis systems that take into account both cost and performance have become a commercial reality and many designers have already relinquished control of the logic netlist level of design to automatic computer aids To date only in certain well defined areas especially digital signal processing and telecommunications have higher level design methods and tools found significant success However the forces of time to market and growing system complexity will demand the broad based adoption of high level automated methods and tools over the next few years
