activity with the potential to improve the quality of health care and control costs through careful comparison of alternative treatments 1 It has been called on many occasions the gold standard against which all other clinical research is measured Although many clinical trials are of high quality a careful reader of the medical literature will notice that a large number have deficiencies in design conduct analysis presentation and or interpretation of results Improvements have occurred over the past few decades but too many trials are still conducted without adequate attention to its fundamental principles Certainly numerous studies could have been upgraded if the authors had had a better understanding of the fundamentals Since the publication of the first edition of this book a large number of other texts on clinical trials have appeared most of which are indicated here 2 21 Several of them however discuss only specific issues involved in clinical trials Additionally many are no longer current The purpose of this fourth edition is to update areas in which major progress has been made since the publication of the third edition We have revised most chapters considerably and added one on ethical issues

Concise Biostatistical Principles & Concepts Laurens Holmes Jr., 2014-03-06 Biostatistics deals with making sense of data While statistical inference is essential in our application of the research findings to clinical decision making regarding the care of our patients statistical inference without clinical relevance or importance can be very misleading and even meaningless This textbook has attempted to deemphasize p value in the interpretation of clinical and biomedical data by stressing the importance of confidence intervals which allow for the quantification of evidence For example a large study due to a large sample size that minimizes variability may show a statistically significant difference while in reality the difference is too insignificant to warrant any clinical relevance Covers these relevant topics in biostatistics Design Process Sampling Reality in Statistical Modeling Basics of Biostatistical Reasoning Inference Central Tendency Theorem Measures of Dispersion Most commonly used abused parametric test t test Most commonly used abused non parametric test chi squared statistic Sample size and power estimations Logistic Binomial Regression Models Binary Outcomes Time to Event Data Survival Analysis Count Data Poisson Regression ANOVA ANCOVA Mixed Effects Model Fixed and Random RANOVA GEE Simple Multiple Linear Regression Models Correlation Analysis Pearson Spearman Rank Clinical Statistical Significance p value as a function of sample size Clinical and biomedical researchers often ignore an important aspect of evidence discovery from their funded or unfunded projects Since the attempt is to illustrate some sets of relationships from the data set researchers often do not exercise substantial amount of time in assessing the reliability and validity of the data to be utilized in the analysis However the expected inference or the conclusion to be drawn is based on the analysis of the un assessed data Reality in statistical modeling of biomedical and clinical research data remains the focus of scientific evidence discovery and this book This text is written to highlight the importance of appropriate design prior to analysis by placing emphasis on subject selection and probability sample and the randomization process when applicable prior to the selection of the analytic tool In addition this book stresses the importance of biologic and clinical significance in the interpretation of study findings The basis for statistical inference implying the quantification of random error is random sample which had been perpetually addressed in this book When studies are conducted without a random sample except when disease registries databases or consecutive subjects are utilized as often encountered in clinical and biomedical research it is meaningless to report the findings with p value

Workplace Health Promotion, 2nd edition Danijela Gasevic, Leah Okenwa-Emegwa, 2023-01-09 Work related factors have implications for health and wellbeing Due to the amount of time spent at the workplace and the impact of work on health over an individual's life course the workplace has evolved as an important arena for population health promotion Risk factors within the physical and psychosocial working environment as well as inadequate organizational support are associated with increasing work related health problems which result in psychosocial and economic implications for the individual the family the organization and the society Recent estimates revealed an increasing level of sickness absence due

to work related factors among others In recognition of the importance of worker health and a healthy working life but also in line with numerous occupational health goals many organisations set aside significant amounts of financial resources annually to promote work well being However studies have shown that despite this positive disposition among employers both employee participation and the impact of such programs remain minimal According to the Ottawa declaration for health promotion and the Luxembourg declaration for Workplace Health Promotion WHP WHP should be strategic It is recommended that WHP be conducted in a systematic and continuous process of needs analysis priority setting planning implementation and evaluation Unfortunately available studies show that many companies have policies currently in place but lack knowledge regarding proper implementation and evaluation The foregoing phenomenon raises questions regarding the level of knowledge of and attitudes towards WHP among people in management positions This Research Topic aims to address factors affecting workplace health promotion What does WHP mean for employers What forms of WHP packages exist Is there evaluation and follow up of such interventions What are the barriers and facilitators relating to the uptake of WHP interventions among employees Do people in relevant managerial positions possess adequate knowledge regarding WHP Manuscripts that explore factors crucial for WHP including individual and organizational level factors crucial for WHP are welcomed Manuscripts on barriers evidence based interventions best practices analysis of existing policy documents and those with a life course perspective etc are also welcomed Manuscripts can be of national international and global perspectives
