Fundamentals of Operations Research Venant MUTABIHIRWA,2020-11-03 This is the first of the book products to come from my teaching and research experience at various tertiary institutions in Operations Research and Statistics now Dataepimatics at various tertiary institutions including the National University of Lesotho and the University of Botswana The book products themselves spring from an intensive

epistemological research I carried out in the two disciplines The approach to the development of the subject matter emphasises the distinction between concepts and techniques on one hand and the problems solved through the techniques on the other with four distinct features First the epistemological framework of Operations Research as a science has been explicitly introduced and emphasised Second clear definitions and descriptions of concepts in Operations Research are introduced Third in the examples emphasis is made in differentiating between the analytical frameworks and the optimisation problems solved through the frameworks Fourth data and decision making are underscored as the underpinnings in the application of the concepts and techniques The discussion itself in the book is divided into six chapters The first chapter introduces epistemological framework of Operations Research whereby the philosophy of Operations Research as a science is emphasised The second chapter discusses the structure of linear programming models which have a wide range of applications in day to day decision making The discussion includes the formulation of the models the skills relating to which are built through well selected optimisation problems introduced systematically in order of their difficulty in relation to the formulation of the models The distinction between the models and the optimisation problems they represent is clearly and well highlighted The third chapter deals with the concepts and techniques for determining the solutions of linear programming models specifically the Graphical Method The fourth chapter deals with inventory optimisation problems and models whereby the simple EOQ model is discussed While the fifth chapter is on queueing optimisation problems and analytical frameworks whereby the SP M M 1 FCFS 1 analytical framework is the main focus And the sixth and last chapter deals with network optimisation problems and analytical frameworks whereby project management analytical framework is discussed as an example of such frameworks As in the other books in the series the writing style is deliberately designed for the book to lecture Operations Research to the reader in such a way that he she enjoys the subject matter The main topics covered are as below
