New Directions in Homotopy Theory Nitya Kitchloo, Mona Merling, Jack Morava, Emily Riehl, W. Stephen Wilson, 2018-05-29 This volume contains the proceedings of the Second Mid Atlantic Topology Conference held from March 12 13 2016 at Johns Hopkins University in Baltimore Maryland The focus of the conference and subsequent papers was on applications of innovative methods from homotopy theory in category theory algebraic geometry and related areas emphasizing the work of younger researchers in these fields

Group Theory Michio Suzuki, 1982 **Computational Group Theory and the Theory of Groups** Luise-Charlotte Kappe, Arturo Magidin, Robert Fitzgerald Morse, 2008 The power

of general purpose computational algebra systems running on personal computers has increased rapidly in recent years. For mathematicians doing research in group theory this means a growing set of sophisticated computational tools are now available for their use in developing new theoretical results. This volume consists of contributions by researchers invited to the AMS Special Session on Computational Group Theory held in March 2007. The main focus of the session was on the application of Computational Group Theory (CGT) to a wide range of theoretical aspects of group theory. The articles in this volume provide a variety of examples of how these computer systems helped to solve interesting theoretical problems within the discipline such as constructions of finite simple groups, classification of p groups via coclass representation theory and constructions involving free nilpotent groups. The volume also includes an article by R. F. Morse highlighting applications of CGT in group theory and two survey articles. Graduate students and researchers interested in various aspects of group theory will find many examples of Computational Group Theory helping research and will recognize it as yet another tool at their disposal.

BOOK JACKET New Horizons in pro- p Groups Marcus du Sautoy, Dan Segal, Aner Shalev, 2000-05-25. A pro- p group is the inverse limit of some system of finite p groups that is of groups of prime power order where the prime conventionally denoted p is fixed. Thus from one point of view to study a pro- p group is the same as studying an infinite family of finite groups but a pro- p group is also a compact topological group and the compactness works its usual magic to bring infinite problems down to manageable proportions. The p -adic integers appeared about a century ago but the systematic study of pro- p groups in general is a fairly recent development. Although much has been discovered many avenues remain to be explored. The purpose of this book is to present a coherent account of the considerable achievements of the last several years and to point the way forward. Thus our aim is both to stimulate research and to provide the comprehensive background on which that research must be based. The chapters cover a wide range. In order to ensure the most authoritative account we have arranged for each chapter to be written by a leading contributor or contributors to the topic in question. Pro- p groups appear in several different though sometimes overlapping contexts.

The Search for Certainty Frank J. Swetz, 2012-01-01. Self-contained and authoritative this history of mathematics is suited to those with no math background. Its absorbing, entertaining essays focus on the era from 1800 to 2000. Contributors include Henri Poincaré, Judith V. Grabiner and H. S. M. Coxeter who discuss topics ranging from logic and infinity to Fermat's Last Theorem.

The Coxeter Legacy Harold Scott Macdonald Coxeter, Chandler Davis, Erich W. Ellers, This collection of essays on the legacy of mathematician Donald Coxeter is a mixture of surveys, updates, history, storytelling and personal memories covering both applied and abstract maths. Subjects include polytopes, Coxeter groups, equivelar polyhedra, Ceva's theorem and Coxeter and the artists.

Research Directions in Number Theory Alina Bucur, Wei Ho, Renate Scheidler, 2024-06-26. This is the fifth proceedings volume published under the Women in Numbers umbrella. The WIN workshops and their proceedings volumes are part of the WIN network aimed at highlighting the research of women and gender minorities in number theory as well as increasing their participation.

and boosting their potential collaborations in number theory and related fields The volume contains research articles in the mathematical area of number theory written by teams of scholars at all levels in the field More information about the network its goals and purpose past and future conferences and past proceedings volumes can be found on the WIN website This volume contains research outcomes and results produced by the collaborative research groups created under the Women in Numbers V workshop the 5th in its series The actual workshop was to take place in 2020 at the Banff International Research Station in Banff Canada but could not take place onsite due to COVID The associated research groups each consisting of 1 2 leaders and 2 4 junior researchers were formed nevertheless and their collaborations went ahead in purely virtual form as well as other papers by author teams for which at least 50% of the authors identify as women or gender minorities These contributions include original research and survey articles in a wide variety of subareas within number theory The former present new cutting edge research that will be of interest to experts in the field to the benefit of their own research The survey articles serve as an accessible introduction for graduate students and other readers to areas of number theory that may be outside their area of expertise

Modular Representation Theory Of Finite And P-adic Groups Wee Teck Gan, Kai Meng Tan, 2015-02-13 This volume is an outgrowth of the program Modular Representation Theory of Finite and p Adic Groups held at the Institute for Mathematical Sciences at National University of Singapore during the period of 1 26 April 2013 It contains research works in the areas of modular representation theory of p adic groups and finite groups and their related algebras The aim of this volume is to provide a bridge where interactions are rare between researchers from these two areas by highlighting the latest developments suggesting potential new research problems and promoting new collaborations It is perhaps one of the few volumes if not only which treats such a juxtaposition of diverse topics emphasizing their common core at the heart of Lie theory

Advances in the Mathematical Sciences Alyson Deines, Daniela Ferrero, Erica Graham, Mee Seong Im, Carrie Manore, Candice Price, 2018-10-31 Featuring research from the 2017 research symposium of the Association for Women in Mathematics this volume presents recent findings in pure mathematics and a range of advances and novel applications in fields such as engineering biology and medicine Featured topics include geometric group theory generalized iterated wreath products of cyclic groups and symmetric groups Conway Coxeter friezes and mutation and classroom experiments in teaching collegiate mathematics A review of DNA topology and a computational study of learning induced sequence reactivation during sharp wave ripples are also included in this volume Numerous illustrations and tables convey key results throughout the book This volume highlights research from women working in academia industry and government It is a helpful resource for researchers and graduate students interested in an overview of the latest research in mathematics

The Santa Cruz Conference on Finite Groups Bruce Cooperstein, Geoffrey Mason, 1980

The New Era in American Mathematics, 1920-1950 Karen Hunger Parshall, 2022-02-22 A meticulously researched history on the development of American mathematics in the three decades following World War I As the Roaring

Twenties lurched into the Great Depression to be followed by the scourge of Nazi Germany and World War II American mathematicians pursued their research positioned themselves collectively within American science and rose to global mathematical hegemony How did they do it The New Era in American Mathematics 1920 1950 explores the institutional financial social and political forces that shaped and supported this community in the first half of the twentieth century In doing so Karen Hunger Parshall debunks the widely held view that American mathematics only thrived after European migrants fled to the shores of the United States Drawing from extensive archival and primary source research Parshall uncovers the key players in American mathematics who worked together to effect change and she looks at their research output over the course of three decades She highlights the educational professional philanthropic and governmental entities that bolstered progress And she uncovers the strategies implemented by American mathematicians in their quest for the advancement of knowledge Throughout she considers how geopolitical circumstances shifted the course of the discipline Examining how the American mathematical community asserted itself on the international stage The New Era in American Mathematics 1920 1950 shows the way one nation became the focal point for the field

Compact Lie Groups and Their Representations

Dmitrii Petrovich Zhelobenko, 1973-01-01

The 5-year Outlook on Science and Technology, 1981, 1981

The

Theory of Classes of Groups Guo Wenbin, 2012-12-06 One of the characteristics of modern algebra is the development of new tools and concepts for exploring classes of algebraic systems whereas the research on individual algebraic systems e.g. groups rings Lie algebras etc continues along traditional lines The early work on classes of algebras was concerned with showing that one class X of algebraic systems is actually contained in another class F Modern research into the theory of classes was initiated in the 1930s by Birkhoff's work 1 on general varieties of algebras and Neumann's work 1 on varieties of groups A I Malcev made fundamental contributions to this modern development In his reports 1 3 of 1963 and 1966 to The Fourth All Union Mathematics Conference and to another international mathematics congress striking theories of classes of algebraic systems were presented These were later included in his book 5 International interest in the theory of formations of finite groups was aroused and rapidly heated up during this time thanks to the work of Gaschütz 8 in 1963 and the work of Carter and Hawkes 1 in 1967 The major topics considered were saturated formations Fitting classes and Schunck classes A class of groups is called a formation if it is closed with respect to homomorphic images and subdirect products A formation is called saturated provided that $G \in F$ whenever $G_j \in F$
