The author has made the science of geology his life study with a view to harmonizing it with the Bible record of creation particularly

His book is based on discoveries in geology which clearly indicate that thee is something wrong with the generally accepted teachings on this science

The large scale structure of the earth is caused by geodynamic processes which are explained using energetic kinematic and dynamic descriptions

While geodynamic

processes are understood to include a large variety of processes and the term is used quite loosely the methods of their description involve well defined fields Energetic descriptions are involved with distribution of energy in our planet typically expressed in terms of heat and temperature Kinematic descriptions describe movements using velocities strains and strain rates Dynamic descriptions indicate how stresses and forces behave In the field we document only the consequences of geological processes The underlying causes are much harder to constrain directly Nevertheless if we want to explain the tectonic evolution of our planet we need to interpret these causes or driving forces For this we need to find a dynamic description of geological processes that is consistent with our observations Our descriptions relate causes and consequences tectonic processes with field observations In many cases we will use equations as a concise form to describe processes and observations in nature As we will be dealing mostly with large scale tectonic questions the observations that we shall use are also on a large scale For example we shall use observations on the elevation Fig 1 1 and heat flow of mountain ranges the thickness of continents and the water depth of the oceans *New Publications of the U.S. Geological Survey*, 1990
