Vidal,2009-09-03      Foundations of Info-Metrics Amos Golan,2017-11-07 Info metrics is the science of modeling reasoning and drawing inferences under conditions of noisy and insufficient information It is at the intersection of information theory statistical inference and decision making under uncertainty It plays an important role in helping make informed decisions even when there is inadequate or incomplete information because it provides a framework to process available information with minimal reliance on assumptions that cannot be validated In this pioneering book Amos Golan a leader in info metrics focuses on unifying information processing modeling and inference within a single constrained optimization framework *Foundations of Info Metrics* provides an overview of modeling and inference rather than a problem specific model and progresses from the simple premise that information is often insufficient to provide a unique answer for decisions we wish to make Each decision or solution is derived from the available input information along with a choice of inferential procedure The book contains numerous multidisciplinary applications and case studies which demonstrate the simplicity and generality of the framework in real world settings Examples include initial diagnosis at an emergency room optimal dose decisions election forecasting network and information aggregation weather pattern analyses portfolio allocation strategy inference for interacting entities incorporation of prior information option pricing and modeling an interacting social system Graphical representations illustrate how results can be visualized while exercises and problem sets facilitate extensions This book is this designed to be accessible for researchers graduate students and practitioners across the disciplines      Theory Of Randomized Search Heuristics: Foundations And Recent Developments Benjamin Doerr,Anne Auger,2011-02-16 Randomized search heuristics such as evolutionary algorithms genetic algorithms evolution strategies ant colony and particle swarm optimization turn out to be highly successful for optimization in practice The theory of randomized search heuristics which has been growing rapidly in the last five years also attempts to explain the success of the methods in

practical applications This book covers both classical results and the most recent theoretical developments in the field of randomized search heuristics such as runtime analysis drift analysis and convergence Each chapter provides an overview of a particular domain and gives insights into the proofs and proof techniques of more specialized areas Open problems still remain widely in randomized search heuristics being a relatively young and vast field These problems and directions for future research are addressed and discussed in this book The book will be an essential source of reference for experts in the domain of randomized search heuristics and also for researchers who are involved or ready to embark in this field As an advanced textbook graduate students will benefit from the comprehensive coverage of topics

**Situation Assessment in Aviation** Jitendra R. Raol, Sudesh K. Kashyap, Lakshmi Shrinivasan, 2024-02-29 Situation Assessment in Aviation focuses on new aspects of soft computing technologies for the evaluation and assessment of situations in aviation scenarios. It considers technologies emerging from multisensory data fusion, MSDF, Bayesian networks, BN, and fuzzy logic, FL, to assist pilots in their decision-making. Studying MSDF, BN, and FL from the perspective of their applications to the problem of situation assessment, the book discusses the development of certain soft technologies that can be further used for devising more sophisticated technologies for a pilot's decision-making when performing certain tasks: airplane monitoring, pair formation, attack, and threat. It explains the concepts of situation awareness, data fusion, decision fusion, Bayesian networks, fuzzy logic type 1 and interval type 2 fuzzy logic. The book also presents a hybrid technique by using BN and FL and a unique approach to the problem of situation assessment beyond visual range and air-to-air combat by utilizing building blocks of artificial intelligence (AI) for the future development of more advanced automated systems, especially using commercial software. The book is intended for aerospace R & D engineers, systems engineers, aeronautical engineers, and aviation training professionals. It will also be useful for aerospace and electrical engineering students taking courses in Air Traffic Management, Aviation Management, Aviation Operations, and Aviation Safety Systems.

**Modeling with Itô Stochastic Differential Equations** E. Allen, 2007-03-08 Dynamical systems with random influences occur throughout the physical, biological, and social sciences. By carefully studying a randomly varying system over a small time interval, a discrete stochastic process model can be constructed. Next, letting the time interval shrink to zero, an Itô stochastic differential equation model for the dynamical system is obtained. This modeling procedure is thoroughly explained and illustrated for randomly varying systems in population biology, chemistry, physics, engineering, and finance. Introductory chapters present the fundamental concepts of random variables, stochastic processes, stochastic integration, and stochastic differential equations. These concepts are explained in a Hilbert space setting which unifies and simplifies the presentation. Computer programs given throughout the text are useful in solving representative stochastic problems. Analytical and

computational exercises are provided in each chapter that complement the material in the text Modeling with It Stochastic Differential Equations is useful for researchers and graduate students As a textbook for a graduate course prerequisites include probability theory differential equations intermediate analysis and some knowledge of scientific programming
