Foundations Of Logic And Functional Programming Workshop:

Foundations of Logic and Functional Programming Mauro Boscarol, Luigia Carlucci Aiello, 1988-04-27 This volume consists of some of the papers that were delivered during the workshop on Foundations of Logic and Functional Programming held in Trento Italy from December 15th to 19th 1986 The meeting centered on themes and trends in Functional Programming and in Logic Programming This book contains five papers contributed by the invited speakers and five selected contributions **Foundations of logic and functional programming** Mauro Boscarol, Luigia Carlucci Aiello, Giorgio Levi, 1988 *Logic Programming* Leon Sterling, 1995 Topics covered Theoretical Foundations Higher Order Logics Non Monotonic Reasoning Programming Methodology Programming Environments Extensions to Logic Programming Constraint Satisfaction Meta Programming Language Design and Constructs Implementation of Logic Programming Languages Compilation Techniques Architectures Parallelism Reasoning about Programs Deductive Databases Applications 13 16 June 1995 Tokyo Japan ICLP which is sponsored by the Association for Logic Programming is one of two major annual international conferences reporting recent research results in logic programming Logic programming originates from the discovery that a subset of predicate logic could be given a procedural interpretation which was first embodied in the programming language Prolog The unique features of logic programming make it appealing for numerous applications in artificial intelligence computer aided design and verification databases and operations research and for exploring parallel and concurrent computing The last two decades have witnessed substantial developments in this field from its foundation to implementation applications and the exploration of new language designs Topics covered Theoretical Foundations Higher Order Logics Non Monotonic Reasoning Programming Methodology Programming Environments Extensions to Logic Programming Constraint Satisfaction Meta Programming Language Design and Constructs Implementation of Logic Programming Languages Compilation Techniques Architectures Parallelism Reasoning about Programs Deductive Databases Applications Logic Programming series Research Reports and Notes , *The Road to Universal Logic* Arnold Koslow, Arthur Buchsbaum, 2015-06-10 This second volume of a collection of papers offers new perspectives and challenges in the study of logic It is presented in honor of the fiftieth birthday of Jean Yves B ziau The papers touch upon a wide range of topics including paraconsistent logic quantum logic geometry of oppositions categorical logic computational logic fundamental logic notions identity rule quantification and history of logic Leibniz Peirce Hilbert The volume gathers personal recollections about Jean Yves B ziau and an autobiography followed by 25 papers written by internationally distinguished logicians mathematicians computer scientists linguists and philosophers including Irving Anellis Dov Gabbay Ivor Grattan Guinness Istvan N meti Henri Prade These essays will be of interest to all students and researchers interested in the nature and future of logic **FGCS '92**, 1992 **Foundations of Logic and Functional Programming** Mauro Boscarol, Luigia Carlucci Aiello, Giorgio Levi, 2014-01-15 , 1990 **East/West Database Workshop** Johann

Eder, Leonid A. Kalinichenko, 2013-06-29 This volume results from the four day scientific Second International East West Database Workshop which took place 25th-28th September 1994 in Klagenfurt Austria continuing a series of workshops started in Kiev in 1990 Lecture Notes in Computer Science No 504 Springer Next Generation Information System Technology The aims of this workshop are twofold first to provide a forum for the presentation and in depth discussion of scientific achievements in the field of advanced databases that will effectively improve the building and use of future information systems second to establish and increase communication between research communities which were formerly separated and therefore had only rare opportunities to interact It should establish contacts between researchers from the East and from the West to make exchange of ideas possible and to trigger collaborations However it is not only political borders which change their perviousness as a result of or giving rise to new autonomies or new possibilities for interaction and collaboration The same happens with the borders between scientific areas in particular in the dynamically evolving areas of computer science Databases and programming languages are integrated in object oriented databases database and information retrieval technology form together the basis for modern multimedia information systems Furthermore the borders between different information systems change and allow various forms of collaboration while maintaining different degrees of autonomy Heterogeneous and distributed databases are enabling technologies for these systems **Programming Logics** Andrei Voronkov, Christoph Weidenbach, 2013-04-05 This Festschrift volume published in memory of Harald Ganzinger contains 17 papers from colleagues all over the world and covers all the fields to which Harald Ganzinger dedicated his work during his academic career The volume begins with a complete account of Harald Ganzinger's work and then turns its focus to the research of his former colleagues students and friends who pay tribute to him through their writing Their individual papers span a broad range of topics including programming language semantics analysis and verification first order and higher order theorem proving unification theory non classical logics reasoning modulo theories and applications of automated reasoning in biology 情報処理学会論文誌 (Japan), 1997 **Programming Languages and Systems** Ilya Sergey, 2022-03-28 This open access book constitutes the proceedings of the 31st European Symposium on Programming ESOP 2022 which was held during April 5-7 2022 in Munich Germany as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2022 The 21 regular papers presented in this volume were carefully reviewed and selected from 64 submissions They deal with fundamental issues in the specification design analysis and implementation of programming languages and systems **TAPSOFT '91 - Volume 2** Samson Abramsky, Thomas S. conferences initiated in California in December 1981 The purpose of this conference was to bring together database researchers users and system builders working in this specific field to discuss the particular points of interest to propose new solutions to the problems of the domain and to expand the topics of the previous conferences both from the theoretical and from the applicational point of view The papers of four scientific sessions dealt with the following topics knowledge base and expert system data model natural language processing query language time performance user interface heterogeneous data classification storage constraints automatic drawing ranges and trackers and arithmetic coding Two other special sessions presented work on progress papers on geographical data modelling spatial database queries user interface in an Object Oriented SDB interpretation of queries graphical query language and knowledge browsing front ends The conference also had three invited papers on topics of particular interest such as Temporal Data Statistical Data Management Requirements and Knowledge Based Decision Support Systems included in this volume The introductory paper by M Rafanelli provides both an introduction to the general concepts helpful to people outside the field and a survey of all the papers in these Proceedings Furthermore there were three open panels Papers by the chairmen contributions of the panelists and a summary of the respective discussions are included in this volume too

Concrete and Abstract Voronoi Diagrams Rolf Klein, 1989-12-20 The Voronoi diagram of a set of sites is a partition of the plane into regions one to each site such that the region of each site contains all points of the plane that are closer to this site than to the other ones Such partitions are of great importance to computer science and many other fields The challenge is to compute Voronoi diagrams quickly The problem is that their structure depends on the notion of distance and the sort of site In this book the author proposes a unifying approach by introducing abstract Voronoi diagrams These are based on the concept of bisecting curves which are required to have some simple properties that are actually possessed by most bisectors of concrete Voronoi diagrams Abstract Voronoi diagrams can be computed efficiently and there exists a worst case efficient algorithm of divide and conquer type that applies to all abstract Voronoi diagrams satisfying a certain constraint The author shows that this constraint is fulfilled by the concrete diagrams based on large classes of metrics in the plane

Recent Issues in Pattern Analysis and Recognition Virginio Cantoni, Reiner Creutzburg, Stefano Levialdi, Gottfried Wolf, 1989-12-20 This book offers readers a broad view of research in some Western and Eastern European countries on pattern and signal analysis and on coding handling and measurement of images It is a selection of refereed papers from two sources first a satellite conference within the biannual International Conference on Pattern Recognition held in Rome November 14 17 1988 and second work done at the International Basic Laboratory on Image Processing and Computer Graphics Berlin GDR The papers are grouped into three sections The first section contains new proposals for the specific computation of particular features of digital images and the second section is devoted to the introduction and testing of general approaches to the solution of problems met in digital geometry image coding feature extraction and object classification The third section illustrates some recent practical results obtained on real

images specifically in character and speech recognition as well as in biomedicine All the techniques illustrated in this book will find direct application in the near future This book should interest and stimulate the reader provoke new thoughts and encourage further research in this widely appealing field

The Psalms in Haiku Form Richard Gwyn, 1997 Presented in the ancient Japanese form of Haiku poetry this vivid and deeply moving new translation of the Psalms is vivid and deeply moving The rhythm of the 17 syllable verse with its carefully structured pattern introduces a meditative element to the ageless Psalms reflecting the life of silent prayer and contemplation of a monk on the island monastery of Caldey Here are praises to spiritual power presented in a stark and clear fashion They will challenge those familiar with the Psalms to new insight while introducing these ancient prayers to a whole new audience Father Richard Gwyn was born in Pembroke Dock Dyfed in 1918 and was a Brother of the Christian Schools for forty years working in London and overseas firstly in Rome and then Canada India Jamaica and Nigeria He transferred to the Cistercian Abbey on Caldey Island off the Welsh coast where he was ordained priest

Concepts, Design, and Performance Analysis of a Parallel Prolog Machine Joachim Beer, 1989-12-13 This monograph presents a novel execution model for the parallel execution of standard sequential Prolog In this execution model Prolog procedure calls can be efficiently pipelined and the author shows how even fully deterministic Prolog programs can be effectively mapped onto the proposed architecture The design is based on a highly optimized abstract Prolog specific instruction set A special feature of this work is a sophisticated classification scheme for Prolog variables which substantially reduces the overhead for unification with occur check To support the model an architecture consisting of a circular pipeline of independent processors has been designed This pipeline has been designed to work as a co processor to a UNIX based workstation In contrast to other attempts to execute sequential Prolog in parallel the proposed model does not restrict the use of any of the standard Prolog language features The book gives a full account of the execution model the system architecture and the abstract Prolog instruction set
