Form and Functions Edward Stuart Russell, **The Tragic Sense of Life** Robert J. Richards, 2008-11-15 Prior to the First World War more people learned of evolutionary theory from the voluminous writings of Charles Darwin s foremost champion in Germany Ernst Haeckel 1834 1919 than from any other source including the writings of Darwin himself But with detractors ranging from paleontologist Stephen Jay Gould to modern day creationists and advocates of intelligent design Haeckel is better known as a divisive figure than as a pioneering biologist Robert J Richards s intellectual biography rehabilitates Haeckel providing the most accurate measure of his science and art yet written as well as a moving account of Haeckel s eventful life

The Cuvier-Geoffrey Debate Toby A. Appel, 1987-03-26 For scientists no event better represents the contest between form and function as the chief organizing principle of life as the debate between Georges Cuvier and Etienne Geoffroy Saint Hilaire This book presents the first comprehensive study of the celebrated French scientific controversy that focused the attention of naturalists in the first decades of the nineteenth century on the conflicting claims of teleology morphology and evolution which ultimately contributed to the making of Darwin's theory This history describes not only the scientific dimensions of the controversy and its impact on individuals and institutions but also examines the meaning of the debate for culture and society in the years before Darwin

The Gestation of German Biology John H. Zammito, 2017-12-18 The emergence of biology as a distinct science in the eighteenth century has long been a subject of scholarly controversy Michel Foucault on the one hand argued that its appearance only after 1800 represented a fundamental rupture with the natural history that preceded it marking the beginnings of modernity Ernst Mayr on the other hand insisted that even the word biology was unclear in its meaning as late as 1800 and that the field itself was essentially prospective well into the 1800s In *The Gestation of German Biology* historian of ideas John Zammito presents a different version of the emergence of the field one that takes on both Foucault and Mayr and emphasizes the scientific progress throughout the eighteenth century that led to the recognition of the need for a special science The embrace of the term biology around 1800 Zammito shows was the culmination of a convergence between natural history and human physiology that led to the development of comparative physiology and morphology the foundations of biology Magisterial in scope Zammito's book offers nothing less than a revisionist history of the field with which anyone interested in the origins of biology will have to contend

Descartes and the Modern Gordon McOuat, Neil Robertson, Tom Vinci, 2009-03-26 Descartes is not simply our iconic modern philosopher mathematician or scientist He stands as the cultural symbol for modernity itself As such Descartes is widely read in and out of universities as the definitive moment in the birth of what we take to be the Modern Yet recent scholarship has presented numerous challenges to the Cartesian image Some question the legitimacy of calling Descartes a founder of modernity Others have questioned the very legitimacy of Modernity itself using Descartes as a way into that critique This collection of original papers by leading philosophers and historians of early modern thought opens up these questions exploring them in new and markedly interdisciplinary ways offering fresh insights into the important relationship between Descartes and the Modern and the very meaning and status of Modernity itself This collection assembles together for the first time leading representatives from what might be called the naturalist or Anglo American school with those of the continental phenomenological school in a dialogue concerning Descartes place The papers explore crucial questions and recent disputes regarding Descartes relationship to his predecessors to his contemporaries and to modern thought to the philosophy of mind to questions of metaphysics and natural philosophy Descartes and the Modern helps bridge solitudes drawn between these traditional approaches to Descartes
