Rethinking the Foundations of Statistics Joseph B. Kadane, Mark J. Schervish, Teddy Seidenfeld, 1999-08-13 This important collection of essays is a synthesis of foundational studies in Bayesian decision theory and statistics An overarching topic of the collection is understanding how the norms for Bayesian decision making should apply in settings with more than one rational decision maker and then tracing out some of the consequences of this turn for Bayesian statistics There are four principal themes to the collection cooperative non sequential decisions the representation and measurement of partially ordered preferences non cooperative sequential decisions and pooling rules and Bayesian dynamics for sets of probabilities The volume will be particularly valuable to philosophers concerned with decision theory probability and statistics statisticians mathematicians and economists

Foundations of Knowledge Base Management Joachim W. Schmidt, Costantino Thanos, 2012-12-06 In the past applied artificial intelligence systems were built with particular emphasis on general reasoning methods intended to function efficiently even when only relatively little domain specific knowledge was available In other words AI technology aimed at the processing of knowledge stored under comparatively general representation schemes Nowadays the focus has been redirected to the role played by specific and detailed knowledge rather than to the reasoning methods themselves Many new application systems are centered around knowledge bases i e they are based on large collections of facts rules and heuristics that capture knowledge about a specific domain of applications Experience has shown that when used in combination with rich knowledge bases even simple reasoning methods can be extremely effective in a wide variety of problem domains Knowledge base construction and management will thus become the key factor in the development of viable knowledge based applications Knowledge Base Management Systems KBMSs are being proposed that provide user friendly environments for the construction retrieval and manipulation of large shared knowledge bases In addition to deductive reasoning KBMSs require operational characteristics such as concurrent access integrity maintenance error recovery security and perhaps distribution For the development of KBMSs the need to integrate concepts and technologies from different areas such as Artificial Intelligence Databases and Logic has been widely recognized One of the central issues for KBMSs is the framework used for knowledge representation semantic networks frames rules and logics are proposed by the AI and logic communities

Foundations of Dynamic Economic Analysis Michael R. Caputo, 2005-01-10 Foundations of Dynamic Economic Analysis presents a modern and thorough exposition of the fundamental mathematical formalism used to study optimal control theory i e continuous time dynamic economic processes and to interpret dynamic economic behavior The style of

presentation with its continual emphasis on the economic interpretation of mathematics and models distinguishes it from several other excellent texts on the subject This approach is aided dramatically by introducing the dynamic envelope theorem and the method of comparative dynamics early in the exposition Accordingly motivated and economically revealing proofs of the transversality conditions come about by use of the dynamic envelope theorem Furthermore such sequencing of the material naturally leads to the development of the primal dual method of comparative dynamics and dynamic duality theory two modern approaches used to tease out the empirical content of optimal control models The stylistic approach ultimately draws attention to the empirical richness of optimal control theory a feature missing in virtually all other textbooks of this type

Foundations of Non-stationary Dynamic Programming with Discrete Time Parameter K. Hinderer, 2012-12-06 The present work is an extended version of a manuscript of a course which the author taught at the University of Hamburg during summer 1969 The main purpose has been to give a rigorous foundation of stochastic dynamic programming in a manner which makes the theory easily applicable to many different practical problems We mention the following features which should serve our purpose a The theory is built up for non stationary models thus making it possible to treat e g dynamic programming under risk dynamic programming under uncertainty Markovian models stationary models and models with finite horizon from a unified point of view b We use that notion of optimality p optimality which seems to be most appropriate for practical purposes c Since we restrict ourselves to the foundations we did not include practical problems and ways to their numerical solution but we give cf section 8 a number of problems which show the diversity of structures accessible to non stationary dynamic programming The main sources were the papers of Blackwell 65 Strauch 66 and Maitra 68 on stationary models with general state and action spaces and the papers of Dynkin 65 Hinderer 67 and Sirjaev 67 on non stationary models A number of results should be new whereas most theorems constitute extensions usually from stationary models to non stationary models or analogues to known results
