

Fatigue

is the most common symptom experienced by adults and children with cancer.

Almost every cancer patient reports some fatigue.

Cancer patients can experience **mental fatigue** as well as **physical fatigue**.

Fatigue related to cancer and its treatment is often not relieved by rest.

Length and depth of sleep may not relieve fatigue.

NCI-supported studies of exercise, including yoga, have shown that **activity** reduces symptoms of fatigue for some cancer patients.

NCI supports research to measure, understand, and treat fatigue in cancer patients.

Fatigue In Patients With Cancer:

Fatigue in Patients with Cancer Agnes Glaus,2012-12-06 Current literature shows that there is a gap in our knowledge about how tired ness fatigue in cancer patients should be defined and measured Existing fa tigue related research in cancer patients shows conceptual and measurement differences Piper 1993 There is no continuum of tiredness fatigue in univer sal use What do patients mean if they fill in a visual analogue scale indicating that they feel very tired Is it an indicator of general well being and thus an 1993 Most articles estimate of general quality of life Hiiirny and Bernhard written by English authors use the word fatigue to identify extreme tired ness It could be said that in the English language tiredness that is perceived as unusual continuing distress is fatigue rather than tiredness In the German language tiredness Mudigkeit is not primarily a term for distress attributed to disease or unusual effort But tiredness becomes a distressing phenomenon when it no longer regulates a healthy balance between rest and activity but represents unusual abnormal or excessive whole body tiredness that is dis proportionate to or unrelated to activity or excessive exertion Piper 1993 As there is no word for fatigue in the German language the definition extreme unusual tiredness in German extreme unubliche Mudigkeit is used to explain the term fatigue This clarification is needed to ensure that future fatigue research conducted in German speaking countries can be com pared with such research carried out elsewhere Cancer-Related Fatigue Joachim Weis,Markus

Horneber,2014-11-12 Cancer related fatigue CrF is increasingly recognized as a significant problem for patients with cancer at all stages including those undergoing therapy and in remission In fact studies have shown that CrF causes patients more distress than pain nausea or vomiting and yet fatigue is still often undertreated and rarely studied However several new treatments such as are being investigated to determine the most effective ways to manage this debilitating symptom and improve patient quality of life Cancer Related Fatigue will provide a concise overview of this condition with an evidence based discussion of diagnosis treatment and long term management Fatigue in Cancer Jo Armes,Meinir

Fatigue: Physiology and Pathology Slawomir Kujawski,Jo Nijs,Julia Newton,Pawel Zalewski,Lynette Hodges,2024-02-15 In 1917 the president of the American Psychological Association at that time Raymond Dodge wrote I have no expectation that the laws of mental fatigue will be formulated in the immediate future Remarkably despite continuous efforts over a period of more than 100 years a mature theory of the origins and neural mechanisms of mental fatigue has yet to be achieved Physical fatigue is defined as the transient inability of muscles to maintain optimal physical performance and is made more severe by intense physical exercise Mental fatigue could be phrased as a transient decrease in maximal cognitive performance resulting from prolonged periods of cognitive activity Currently the mechanism underlying mental fatigue is still yet to be discovered Chronic fatigue is one of the symptoms that may occur in numerous chronic disorders such as hypertension multiple sclerosis fibromyalgia and heart fail Currently there is no cure for ME CFS Chronic fatigue seems to be a relatively common yet undertreated symptom Presumably increasing knowledge of physiological mechanisms underlying fatigue might potentially lead to an improvement in the efficacy of therapy for various disorders Therefore the goal of the current Research Topic is to collect papers on both physiology of fatigue as well as mechanism underlying pathologies as ME CFS Also papers

on clinical trials involving subjects with chronic fatigue or patients with ME CFS are welcomed

Issues in Palliative Care Research Russell K. Portenoy, Eduardo Bruera, 2003-01-30 Palliative care is rapidly evolving as a multidimensional therapeutic model devoted to improving the quality of life of all patients with life threatening illness. Symptom control, management of psychosocial and spiritual concerns, decision making consistent with values and goals, and care of the imminently dying that is appropriate and sensitive to the unique needs of the individual and the family, these are among the critical issues addressed through palliative care. As this discipline has evolved, the need for research in all these areas has become widely acknowledged. *Issues in Palliative Care Research* describes both the progress that already has been made in the investigation of these issues and the methodologic elements that must be addressed in future studies. The perspective is broad and the overriding goal is to inform about the state of the art in these rapidly evolving areas of research.
