

Large Scale Systems: Theory and Applications 1998, IFAC Proceedings Volumes

Descriptions: As the 21st century nears, there is a need to seriously reconsider many aspects of modeling and controlling large, complex, man-made systems. Integration of technologies and functions requires deep interdisciplinary expertise and technical breadth for successful implementation. Large scale systems theory can play a central role in this effort and it is a strongly held belief that this approach will continue to be of major importance in the future.

Real Time Programming 1998 (WRTP '98) Lichen Zhang, A. H. Frigeri, Liangchi Zhang, Wolfgang A. Halang, 1998 With its tradition of more than three decades the IFAC IFIP Workshop on Real Time Programming WRTP has become an excellent forum for exchanging information on recent technological advances and practices in real time

computing a field that is becoming an essential enabling discipline of both control engineering and computer science and engineering. As there is an accelerated growth of demands for the functionality and dependability of real time systems, our intellectual and engineering abilities are being challenged to come up with practical solutions to the problems faced in the design and development of complex real time systems. The Workshop on Real Time Programming provides an opportunity to assess the state of the art, to present new results and to discuss possible lines of future developments. Primarily it focuses on software development for real time systems and real time operating systems. This 1998 Workshop covered the latest research and developments in real time communication and formal specification, operating systems and performance analysis, scheduling, use of neural networks in real time systems, embedded systems and programming methodologies. Contributions came from Europe, North America, Australia and the Far East. In addition to these high quality technical papers, the programme also featured three world renowned keynote speakers: Intelligent Autonomous Vehicles 1998 (IAV'98) Miguel Á. Salichs, Arne Halme, 1998. These proceedings contain papers presented at the 3rd IFAC Symposium on Intelligent Autonomous Vehicles held in Madrid, Spain. The aim of the symposium was to present and discuss research and development on advanced applications in the field of land based marine and aerospace intelligent autonomous vehicles. The papers describe not only new methods and technologies on solving classic problems related with intelligent autonomous vehicles but also new approaches to their design such as new architectures, topological navigation and self learning systems.

Control Systems Design 2003 (CSD '03) Stefan Kozak, Mikulas Huba, 2004-04. The material presented in this volume represents current ideas, knowledge, experience and research results in various fields of control system design.

Control Applications and Ergonomics in Agriculture 1998 N. Sigrimis, P.P. Groumpos, 1999. In this workshop an attempt was made to fuse the disciplines involved in the requirements specification, design and implementation of control systems for the automation of agricultural systems. The need to meet the demanding specifications for increasingly complex agricultural systems is being addressed by using increasingly sophisticated models and control algorithms. In parallel, the ever decreasing profit margins in the agricultural sector no longer permit agriculture to operate in the traditional manner but are forcing it to transform into a contemporary business with all the complexities that this implies. The work environment is changing rapidly and humans are moving to positions of supervision and management while automation and robotics are taking over many of the menial and tedious tasks. Modern technological developments in industrial management and control are entering agriculture and transforming it rapidly into an industry. Smaller agricultural systems are being linked to produce hierarchical large scale agricultural systems whose management and control demands high level intelligent decision support mechanisms. Local and wide area networks provide the relevant agricultural and economic data and facts to central production management systems where decisions are made and subsequently transferred to remote locations for execution. Agriculture which is a highly distributed operation is taking advantage of modern communications networks unifying remote locations.

into a virtual world Agriculture has been making significant steps in producing food and fibers of improved quality in a highly constrained economic environment Robust control of such a largely uncertain system demands that application domain experts work closely with systems analysts and control engineers to produce systems of higher autonomy and efficiency to meet today's global challenge *Large Scale Systems: Theory and Applications 1998* N.T.
