Nonlinear Laser Chemistry V. S. Letokhov,2012-12-06 Prefaces are usually written when a manuscript is finished

Having finished this book I can clearly see many shortcomings in it But if I began to eliminate them I would probably write quite a different book in another two years indeed this has already happened once In 1979 when I finished the first version of this book it was much broader in scope and was to be titled Laser Photochemistry Corrections and additions to that unpublished manuscript gave rise to the present book with its revised title and more specific subject matter I resolved to have it published in exactly this form despite the fact that it concerns a dynamically developing field of research and will soon make way for other works This book contains the basic ideas and results I have been developing with my colleagues friends and students at the Institute of Spectroscopy USSR Academy of Sciences in the town of Troitsk since 1970 It deals with the interaction of light with atoms and molecules via multiple phonon interaction Nonlinear processes in the resonant interaction are used to illustrate the physical mechanisms involved and to indicate how these processes have led to modern applications such as isotope separation detection of single atoms and molecules and chemical and biochemical synthesis

Energy Research Abstracts ,1992-02 Crystalline Lasers Alexander Kaminskii,2020-09-10 By the end of the 1970s crystalline lasers were widely used in science engineering medicine and technology The types of lasers used have continued to grow in number to include newly discovered crystalline hosts previously known compounds generating at other spectral wavelengths and broadband tunable stimulated emission This has led to the creation of an extremely promising new generation of crystalline lasers that are both highly efficient and more reliable The major part of this book is devoted to describing multilevel operating laser schemes for stimulated emission excitation in insulating crystals doped with lanthanide ions The first part of Crystalline Lasers deals with the history of the physics and spectroscopy of insulating laser crystals The chapters in the second part of the book present results from the study of Stark energy levels of generating ions in laser crystals and their radiative and nonradiative intermanifold transition characteristics This section includes extensive tabular data and reference information Popular and novel operating schemes of crystalline lasers are covered in Part 3 In the chapters in the fourth part of the book the newest technologies in the physics and engineering of crystalline lasers are considered The results of investigations into laser action under selective excitations miniature crystalline lasers and the properties of nonlinear activated laser crystals are presented and analyzed Crystalline Lasers summarizes and reviews the results of many years of research and studies of activator ions and multilevel operating laser schemes and discusses exciting prospects of using these systems to create new types of crystalline lasers This book will be of use to laser scientists and engineers physicists and chemical engineers **Publications of LASL Research** Los Alamos Scientific Laboratory,1979

Principles of Lasers Orazio Svelto, 2012-12-06 This second

edition appearing about twenty years after the discovery of the laser is a substantially revised version of the first edition It is like the first aimed at both classroom teaching and self study by technical personnel interested in learning the principles of laser operation In preparing the second edition the hope has been that both these aims will be better served as a result of the various improvements made The main changes have been made with the following aims in mind i To update the book Thus new topics have been added in particular on various new types of lasers e g rare gas halide excimer lasers color center lasers and free electron lasers while on the other hand some topics have been given less emphasis again this applies particularly to

some types of lasers e g the ruby laser Updating is especially important in the area of laser applications and the chapter on this topic has therefore been completely rewritten ii To make some improvements to the logical consistency of the book by rearranging material and adding new material Thus a few topics have been moved from one section to another and a new chapter entitled Laser Beam Transformation has been added iii To further reduce the mathematical content placing greater emphasis on physical descriptions of phenomena
