students Book jacket **The Forces Behind School Change** Tim Carman, 2008 American public schools are facing a crisis of confidence as America penetrates more deeply into the era of The No Child Left Behind Act The statute requires the standards to rise each year until the year of perfection 2014 when 100% of the students are required to meet annual yearly progress AYP There is varied discussion among credible education groups that the year of perfection is unrealistic since not all children come to school equally ready to learn Universal standards that do not account for differences in student readiness create an uneven measure That is where this book comes in The Forces Behind School Change Defining and Understanding the Call for Perfection is intended to be a resource for schools of affluence and also for schools of poverty This classic dichotomy is at the center of the tension Tim Carman argues that there is hope amid all the tension The Forces Behind School Change will provide school communities with the knowledge and skills to close the achievement gap In addition to dozens of best practice ideas that schools will need this book also spotlights how to use the most up to date information on the brain to help students achieve educational excellence and provides hope confidence and the know how to accomplish the seemingly impossible task of insuring that every child no matter their background will meet the high academic standards that are required The Cumulative Book Index ,1996 A world list of books in the English language

Designing Learning Environments for Developing Understanding of Geometry and Space Richard Lehrer, Daniel Chazan, 2012-11-12 This volume reflects an appreciation of the interactive roles of subject matter teacher student and technologies in designing classrooms that promote understanding of geometry and space Although these elements of geometry education are mutually constituted the book is organized to highlight first the editors vision of a general geometry education second the development of student thinking in everyday and classroom contexts and third the role of technologies Rather than looking to high school geometry as the locus and all too often the apex of geometric reasoning the contributors to this volume suggest that reasoning about space can and should be successfully integrated with other forms of mathematics starting at the elementary level and continuing through high school Reintegrating spatial reasoning into the mathematical mainstream indeed placing it at the core of K 12 mathematics environments that promote learning with understanding will mean increased attention to problems in modeling structure and design and reinvigoration of traditional topics such as measure dimension and form Further the editors position is that the teaching of geometry and spatial visualization in school should not be compressed into a characterization of Greek geometry but should include attention to contributions to the mathematics of space that developed subsequent to those of the Greeks This volume is essential reading for those involved in mathematics education at all levels including university faculty researchers and graduate students **Handbook of Psychology, Educational Psychology** William M. Reynolds, Gloria J. Miller, 2003-06-02 Includes established theories and cutting edge developments Presents the work of an international group of experts Presents the nature origin implications and future course of major unresolved issues in the area *Learning Mathematics and Logo* Celia Hoyles, Richard Noss, 1992

These original essays summarize a decade of fruitful research and curriculum development using the LISP derived language Logo. They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings. Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils' Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry. In the second section the contributions take up pedagogical styles and strategies. They tackle such cognitive and metacognitive questions as: What range of learning styles can the Logo setting accommodate? How can teachers make sense of pupils' preferred strategies? And how can teachers help students to reflect on the strategies they are using? Returning to the mathematical structures, essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics.
