Guidelines for Consequence Analysis of Chemical Releases, 2010 Understanding Explosions Daniel A. Crowl, 2010-08-13 There are many different types of explosions, each with its own complex mechanism. Understanding explosions is important in preventing them. This reference provides valuable information on explosions for everyone involved in the operation, design, maintenance, and management of chemical processes, helping enhance understanding of the nature of explosions and the practical methods required to prevent them from occurring. The text includes: Fundamental basis for explosions; Explosive and flammable behavior and characteristics of materials; Different types of explosions; Fire and explosion hazard recognition; Practical methods for preventing explosions or minimizing the potential consequences. Additional references: Understanding Explosions provides a practical understanding of explosion fundamentals, including the different types of explosions, the explosive and flammable behavior of materials, and the hazards related to fires and explosions. It also discusses practical methods to prevent and minimize the probability and consequence of an explosion during routine use of flammable, combustible, and/or reactive materials. **Deflagration and Detonation Flame Arresters** Stanley S. Grossel, 2010-08-26 Designed for chemical engineers and other technical personnel involved in the design, operation, and maintenance of facilities and equipment where deflagration and detonation flame arresters (DDFAs) may be required, this book fosters effective application and operation of DDFAs through treatment of their principles of operation, selection, installation, and maintenance methods. This reference covers a broad range of issues concerning DDAs, including: An overview of deflagration and detonation prevention and protection practices; An overview of combustion and flame propagation and how DDAs halt propagation; Deflagration and detonation flame arrester technology; Installation in process systems; Regulations, codes, and standards; Illustrative examples, calculations, and guidelines for DDA selection; Appendices including a glossary, a flame arrester specification sheet for vendor quotation, and a listing of flame arrester manufacturers. **Revalidating Process Hazard Analyses** Walter L. Frank, David K. Whittle, 2010-08-27 The foundation of any successful process safety program is a current set of process hazard analyses (PHAs) for each of its processes. Revalidating PHAs to keep them up to date and applicable is a must. This book is derived from the experience of many companies in the chemical and hydrocarbon processing industries and presents demonstrated, concise, and common sense approaches for a resource-effective revalidation of PHAs. It includes flowcharts, checklists, and worksheets that provide invaluable assistance to the revalidation process.
