Improving The Exploration Process By Learning From The Past:

Improving the Exploration Process by Learning from the Past K. Ofstad,E.-J. Kittilsen,P. Alexander-Marrack,2000-07-07 Learning by experience is both a part of the daily life and the exploration life A systematic review of the past is essential to improve the exploration process by better managing risks and uncertainties Learning through different disciplines has become a favoured technique With new tools for interpretation and simulation integration and data and the creation of cross discipline teams we can take major step forward in understanding the exploration task and its different elements Global views and lessons learned on the Norwegian Continental Shelf on risk management and retrospective prospect assessment are presented in this book Detailed exploration case histories from the Norwegian Continental Shelf documenting both positive and negative experiences and highlighting the benefits of integrated thinking and methods are presented The impact of the application of various state of the art and developing technologies on portfolio management opportunity evaluation and volumetric and risk assessment of prospects and discoveries are reviewed and the future technological challenges in exploring the remaining hydrocarbon potential of the Norwegian continental Shelf are summarised *Data Room Management for Mergers and Acquisitions in the Oil and Gas Industry* Bob Harrison,2020-08-11 Data Room Management and Rapid Asset Evaluation Theory and Case Studies in Oil and Gas Volume 66 introduces frameworks and workflows that help streamline the data room process highlight the essential data that must be assembled in the permitted time window and accelerate the subsequent assessment of the opportunity The book combines theory with case studies some of which describe lessons learned directly by the author himself Methodologies are presented that can be used immediately by those involved in the technical and commercial evaluation of oil and gas exploration and production ventures The book is suitable for readers with a wide spectrum of experience from those who are newcomers to the strange world of data rooms to those diehards who may have spent too many hours in them The purposes strategies and tactics of data rooms are explained along with some suggestions on how to survive them and how to get a fit for purpose evaluation in front of the decision makers in the shortest timeframe possible Demonstrates what makes a good data room including how vendors attract potential buyers to attend and how the latter can decide whether they should go or not Presents how to prepare for a data room what needs to be done there and how to evaluate the assets on offer as quickly as possible Covers which essential data should be gathered and questions to ask Suggests how to avoid common banana skins when under pressure to provide a rapid but reasonable evaluation Cross Border Themes in Petroleum Geology I: The North Sea S. Patruno,S. G. Archer,D. Chiarella,J. A. Howell,C. A.-L. Jackson,H. Kombrink,2022 A cross border approach to exploration appraisal and development is important in mature basins such as the North Sea where the low hanging fruit have long gone This approach emphasizes the need to see the basin as one geological entity in order to maximize economic recovery and prepare the area for the energy transition This volume offers an up to date geology without borders view of the stratigraphy sedimentology tectonics and oil and gas

exploration trends of the entire North Sea basin along with the challenges associated with differences in data continuity and nomenclature across median lines This volume includes overviews of cross border play statistics lithostratigraphic naming conventions and exploration performance through to new facies models for cross border areas As such this volume will be a valuable reference for every geoscientist working in the North Sea for years to come   From Depositional Systems to Sedimentary Successions on the Norwegian Continental Margin Allard W. Martinius,R. Ravnås,J. A. Howell,R. J. Steel,J. P. Wonham,2014-10-06 The Norwegian Continental Shelf NCS focus of this special publication is a prolific hydrocarbon region and both exploration and production activity remains high to this day with a positive production outlook A key element today and in the future is to couple technological developments to improving our understanding of specific geological situations The theme of the publication reflects the immense efforts made by all industry operators and their academic partners on the NCS to understand in detail the structural setting sedimentology and stratigraphy of the hydrocarbon bearing units and their source and seal The papers cover a wide spectrum of depositional environments ranging from alluvial fans to deepwater fans in almost every climate type from arid through humid to glacial and in a variety of tectonic settings Special attention is given to the integration of both analogue studies and process based models with the insights gained from extensive subsurface datasets   **Industrial Structural Geology** F.L. Richards,N.J. Richardson,S.J. Rippington,R.W. Wilson,C.E. Bond ,2015-10-22 The practical application of structural geology in industry is varied and diverse it is relevant at all scales from plate wide screening of new exploration areas down to fluid flow behaviour along individual fractures From an industry perspective good structural practice is essential since it feeds into the quantification and recovery of reserves and ultimately underpins commercial investment choices Many of the fundamental structural principles and techniques used by industry can be traced back to the academic community and this volume aims to provide insights into how structural theory translates into industry practice Papers in this publication describe case studies and workflows that demonstrate applied structural geology covering a spread of topics including trap definition fault seal fold and thrust belts fractured reservoirs fluid flow and geomechanics Against a background of evolving ideas new data types and advancing computational tools the volume highlights the need for structural geologists to constantly re evaluate the role they play in solving industrial challenges

Proceedings of the 2024 8th International Seminar on Education, Management and Social Sciences (ISEMSS 2024) Lu Chang,Gabriel Antunes de Araujo,Lei Shi,Qian Zhang,2024-10-31 This is an open access book The conference will focus on educational management and social studies discussing key challenges and research directions for the development of the field promoting the development and application of theories and methods in the field in universities and enterprises and providing a favorable platform for innovative scholars and experts focusing on the field of research to exchange new ideas and present their research results   *Reservoir Compartmentalization* S. J. Jolley,2010 Reservoir compartmentalization the segregation of a petroleum accumulation into a number of individual fluid pressure compartments

controls the volume of moveable oil or gas that might be connected to any given well drilled in a field and consequently impacts booking of reserves and operational profitability This is a general feature of modern exploration and production portfolios and has driven major developments in geoscience engineering and related technology Given that compartmentalization is a consequence of many factors an integrated subsurface approach is required to better understand and predict compartmentalization behaviour and to minimize the risk of it occurring unexpectedly This volume reviews our current understanding and ability to model compartmentalization It highlights the necessity for effective specialist discipline integration and the value of learning from operational experience in detection and monitoring of compartmentalization stratigraphic and mixed mode compartmentalization and fault dominated compartmentalization Page 4 of cover **ECAI 2023** K.
