Juniper and Cisco Routing Walter J. Goralski,2002-10-02 Discusses how network traffic flow is complicated by the fact that each routing vendor has its own proprietary implementation or extension to the routing protocols Covers both Juniper and Cisco routing and touches on other vendor implementations Focuses on routing policy covering Border Gateway Protocol in depth Includes real world multivendor configuration examples **Juniper and Cisco Routing** Goralski,2002-10-01

Mining and Control of Network Traffic by Computational Intelligence Federico Montesino Pouzols,Diego R. Lopez,Joaquim Barros,2011-02-05 As other complex systems in social and natural sciences as well as in engineering the Internet is hard to understand from a technical point of view Packet switched networks defy analytical modeling The Internet is an outstanding and challenging case because of its fast development unparalleled heterogeneity and the inherent lack of measurement and monitoring mechanisms in its core conception This monograph deals with applications of computational intelligence methods with an emphasis on fuzzy techniques to a number of current issues in measurement analysis and control of traffic in the Internet First the core building blocks of Internet Science and other related networking aspects are introduced Then data mining and control problems are addressed In the first class two issues are considered predictive modeling of traffic load as well as summarization of traffic flow measurements The second class control includes active queue management schemes for Internet routers as well as window based end to end rate and congestion control The practical hardware implementation of some of the fuzzy inference systems proposed here is also addressed While some theoretical developments are described we favor extensive evaluation of models using real world data by simulation and experiments
