**Justice and Natural Resources** Kathryn Mutz, Gary Bryner, Douglas Kenney, 2002 Just over two decades ago research findings that environmentally hazardous facilities were more likely to be sited near poor and minority communities gave rise to the environmental justice movement Yet inequitable distribution of the burdens of industrial facilities and pollution is only half of the problem poor and minority communities are often denied the benefits of natural resources and can suffer disproportionate harm from decisions about their management and use Justice and Natural Resources is the first book devoted to exploring the concept of environmental justice in the realm of natural resources Contributors consider how decisions about the management and use of natural resources can exacerbate social injustice and the problems of disadvantaged communities Looking at issues that are predominantly rural and western many of them involving Indian reservations public lands and resource development activities it offers a new and more expansive view of environmental justice The book begins by delineating the key conceptual dimensions of environmental justice in the natural resource arena Following the conceptual chapters are contributions that examine the application of environmental justice in natural resource decision making Chapters examine how natural resource management can affect a range of stakeholders quite differently distributing benefits to some and burdens to others the potential for using civil rights laws to address damage to natural and cultural resources the unique status of Native American environmental justice claims parallels between domestic and international environmental justice how authority under existing environmental law can be used by Federal regulators and communities to address a broad spectrum of environmental justice concerns Justice and Natural Resources offers a concise overview of the field of environmental justice and a set of frameworks for understanding it It expands the previously urban and industrial scope of the movement to include distribution of the burdens and access to the benefits of natural resources broadening environmental justice to a truly nationwide concern

**Heritage Conservation in the United States** John H. Sprinkle, Jr., 2023-05-25 Heritage Conservation in the United States begins to trace the growth of the American historic preservation movement over the last 50 years viewed from the context of the civil rights and environmental movements The first generation of the New Preservation 1966 1991 was characterized by the establishment of the bureaucratic structures that continue to shape the practice of heritage conservation in the United States The National Register of Historic Places began with less than a thousand historic properties and grew to over 50 000 listings Official recognition programs expanded causing sites that would never have been considered as either significant or physically representative in 1966 now being regularly considered as part of a historic preservation planning process The book uses the story of how sites associated with African American history came to be officially recognized and valued and how that process challenged the conventions and criteria that governed American preservation practice This book is designed for the historic preservation community and students engaged in the study of historic preservation

**The Water-Food-Energy Nexus** Jeremy Allouche, Carl Middleton, Dipak Gyawali, 2019-04-09 The world of development thinkers and practitioners is abuzz with a new lexicon the idea of the nexus between water food and energy which is intuitively compelling It promises better integration of multiple sectoral elements a better transition to greener economies and sustainable development However there appears to be little agreement on its precise meaning whether it only complements existing environmental governance approaches or how it can be enhanced in national contexts One current approach to the nexus treats it as a risk and security matter while another treats it within economic rationality addressing externalities across sector A third perspective acknowledges it as a fundamentally political process requiring negotiation amongst different actors with distinct perceptions interests and practices This perspective highlights the fact that technical solutions for improving coherence within the nexus may have unintended and negative impacts in other policy areas such as poverty alleviation and education The Water Food Energy Nexus Power Politics and

Justice lays out the managerial technical definitions of the nexus and challenges these conceptions by bringing to the forefront the politics of the nexus around two key dimensions a dynamic understanding of water food energy systems and a normative positioning around nexus debates in particular around social justice The authors argue that a shift in nexus governance is required towards approaches where limits to control are acknowledged and more reflexive plural strategies adopted This book will be of interest to academic researchers policy makers and practitioners in the fields of international development studies environmental politics and science and technology studies as well as international relations

Resisting Global Toxics David Naguib Pellow, 2007-08-10 Examines the export of hazardous wastes to poor communities of color around the world and charts the global social movements that challenge them Every year nations and corporations in the global North produce millions of tons of toxic waste Too often this hazardous material linked to high rates of illness and death and widespread ecosystem damage is exported to poor communities of color around the world In *Resisting Global Toxics* David Naguib Pellow examines this practice and charts the emergence of transnational environmental justice movements to challenge and reverse it Pellow argues that waste dumping across national boundaries from rich to poor communities is a form of transnational environmental inequality that reflects North South divisions in a globalized world and that it must be theorized in the context of race class nation and environment Building on environmental justice studies environmental sociology social movement theory and race theory and drawing on his own research interviews and participant observations Pellow investigates the phenomenon of global environmental inequality and considers the work of activists organizations and networks resisting it He traces the transnational waste trade from its beginnings in the 1980s to the present day examining global garbage dumping the toxic pesticides that are the legacy of the Green Revolution in agriculture and today's scourge of dumping and remanufacturing high tech and electronics products The rise of the transnational environmental movements described in *Resisting Global Toxics* charts a pragmatic path toward environmental justice human rights and sustainability

**From the Inside Out** Jill Lindsey Harrison, 2019-10-29 An examination of why government agencies allow environmental injustices to persist Many state and federal environmental agencies have put in place programs policies and practices to redress environmental injustices and yet these efforts fall short of meeting the principles that environmental justice activists have fought for In *From the Inside Out* Jill Lindsey Harrison offers an account of the bureaucratic culture that hinders regulatory agencies attempts to reduce environmental injustices It is now widely accepted that America's poorest communities communities of color and Native American communities suffer disproportionate harm from environmental hazards with higher exposure to pollution and higher incidence of lead poisoning cancer asthma and other diseases linked to environmental ills And yet Harrison reports some regulatory staff view these problems as beyond their agencies area of concern requiring too many resources or see neutrality as demanding color blind administration Drawing on more than 160 interviews with interviewees including 89 current or former agency staff members and more than 50 environmental justice activists and others who interact with regulatory agencies and more than 50 hours of participant observation of agency meetings both open and closed door Harrison offers a unique account of how bureaucrats resist undermine and disparage environmental justice reform and how environmental justice reformers within the agencies fight back by trying to change regulatory practice and

culture from the inside out Harrison argues that equity not just aggregated overall improvement should be a metric for evaluating environmental regulation     Reinventing Eden Carolyn Merchant,2013-03-12 This revised edition of Carolyn Merchant s classic Reinventing Eden has been updated with a new foreword and afterword Visionary quests to return to the Garden of Eden have shaped Western Culture This book traces the idea of rebuilding the primeval garden from its origins to its latest incarnations and offers a bold new way to think about the earth     **The Ecological Life** Jeremy Bendik-Keymer,2006-01-26 Written as a series of lectures The Ecological Life offers a humanistic perspective on environmental philosophy that challenges some of the dogmas of deep ecology and radical environmentalism while speaking for their best desires The book argues that being human centered leaves us open to ecological identifications rather than the opposite Bendik Keymer draws on analytic and continental traditions of philosophy as well as literature and visual media He argues for a sense of ecological justice consonant with human rights and shows how humanistic thinking is committed to deepening respect for life and our ecological orientation In a clear jargon free and conversational tone The Ecological Life presents a timely and important contribution to civic engagement in an ecological century     *General Technical Report PNW-GTR ,2003     Access, Labor, and Wild Floral Greens Management in Western Washington's Forests ,*

Deceiving (dis)appearances Harlan Koff,2007 The impact of recent shifts in global geopolitics and economic markets has led to the re conceptualization of national borders Scholars have shifted their analysis away from the narrow idea of borders and moved their attention towards the wider view of borderlands border regions and border zones thus leading to the conceptual re definition of border politics These recent approaches have identified border areas as socially constructed territories that demonstrate many of the characteristics of independent polities Border communities seem to have come to life creating a degree of autonomy and separation from central state actors While the rich literature in border studies identifies important changes in local political and economic systems it does not necessarily identify the mechanisms that create these changes Why has integration occurred in some border regions while others are being reinforced Why has integration failed in some cases where opportunity structures are positive while it has succeeded in others saddled with more limited constraints The essays in this volume address such fundamental questions     Water Ethics Neelke Doorn,2019-10-25 A comprehensive introduction to water ethics this book explores the common thread between debates in the allocation of water resources the human right to water and the commodification and privatisation of water services and fills the gap for alternatives to the predominantly consequentialist approach to dealing with these issues     *New Water Regimes* Jacque Emel,Alida Cantor,2018-05-22 This book is a printed edition of the Special Issue New Water Regimes that was published in Resources     **Linking Activism** Morgan Gardner,2013-09-13 This book a unique examination of the activist striving to work for more holistic social change creates a conceptual framework to give visibility to the complexity of activist practice that spans environmental and social justice concerns     **Agrarian Dreams** Julie Guthman,2004-08-04 Agrarian Dreams throws a

cold shower of reality over the dream of organic agriculture in California demonstrating all that is lost when organic farming goes industrial This is a challenging book and until we can answer the hard questions Julie Guthman poses a genuinely sustainable agriculture will elude us Michael Pollan author of *The Botany of Desire A Plant's Eye View of the World* Agrarian Dreams puts organic agriculture in a broad intellectual social and theoretical context in a readable way Nobody has written at this scale and scope about organics The availability of this basic data and interpretation will open discussion to a broad range of citizens scholars and decision makers This is an outstanding work Sally K Fairfax Henry J Vaux Distinguished Professor of Forest Policy University of California Berkeley Guthman takes on the sacred cow of organic agriculture that farmers and consumers can transform our food system simply through by adopting new philosophies of eating farming and nature With an analysis that is at the forefront of agrarian theory today she shows that organic farmers no matter what their philosophy have to work under the economic gun of markets and land prices As a result organic growers in California are forced to become increasingly industrialized unjust and unhealthy Her analysis is proof that it will take more than new kinds of thinking to create sustainability in our food system Melanie DuPuis author of *Nature's Perfect Food How Milk Became America's Drink*
