Integration of Performance Management into the Application Lifecycle Eduard Tudenhöfner,2011-09-15 Inhaltsangabe Introduction Despite the widespread recognition that performance is important to the success of a project many software products fail to respond fast enough to user requests or to handle a certain amount of parallel business transactions This is because nowadays projects are result oriented where the focus is on functionality to be implemented Such projects do not pay high attention to application performance because it still does not have the particular importance that unit testing for example has Moreover today s development models usually consider performance management only in a limited way within their lifecycle and often follow what is known as the fix it later approach The fix it later approach concentrates on software correctness and defers performance considerations to the integration testing phase where additional hardware is added or a system is tuned when performance issues are detected The problem of neglecting performance management is that performance issues often do not emerge until an application is put into production where it is likely to suffer the consequences of a performance failure The consequences of performance failures can be increased operational costs increased development and hardware costs and damaged customer relations If severe performance issues are discovered during production it may be too expensive to re design a system or even impossible to add additional hardware in order to meet performance objectives Such projects are likely to be canceled and their costs will be unrecoverable To avoid such situations performance management should be integrated into an application s lifecycle from the beginning This means that performance objectives have to be defined early within a project and continually verified as an

application evolves Having performance management integrated from the beginning allows to reduce overall project risk and costs because performance issues can be spotted and corrected early in the lifecycle and even before end users are affected Furthermore an application is extensively tested for its ability of reaching performance objectives before it is deployed to a production environment and exposed to real users NovaTec GmbH is a company providing IT services in the area of consulting project management software engineering application architectures provisioning performance management and process engineering The competences of NovaTec are logically grouped in **Automated Improvement of Software Architecture Models for Performance and Other Quality Attributes** Koziolk, Anne,2014-01-07 Quality attributes such as performance or reliability are crucial for the success of a software system and largely influenced by the software architecture Their quantitative prediction supports systematic goal oriented software design and forms a base of an engineering approach to software design This thesis proposes a method and tool to automatically improve component based software architecture CBA models based on such quantitative quality prediction techniques **Creating Interoperability Solutions with Perl and .NET** Pasquale De Marco,2025-04-21 In a world where software development demands versatility interoperability and efficiency Creating Interoperability Solutions with Perl and NET emerges as an indispensable guide for developers seeking to transcend the boundaries of programming languages and platforms This comprehensive book unlocks the potential of Perl and NET two powerful forces in the software realm to create applications that are not only powerful and efficient but also elegant and maintainable With its in depth exploration of the Perl NET bridge this book provides a roadmap for developers to seamlessly integrate Perl modules into NET applications and vice versa It delves into the intricacies of crafting custom NET components using Perl empowering developers to leverage the strengths of both languages and create truly interoperable solutions Venturing beyond theoretical concepts the book presents a real world case study that vividly showcases the practical application of Perl and NET working together in harmony This captivating example serves as a testament to the boundless potential of this interoperability inspiring developers to tackle complex challenges with remarkable efficiency and finesse The book further empowers developers by delving into the realm of data access with ADO NET enabling them to effortlessly interact with various data sources and manipulate data with precision It also unravels the secrets of enhancing user interfaces with Windows Forms guiding developers in crafting visually appealing and user friendly applications that seamlessly integrate charts and graphs for data visualization Moreover the book explores the vast landscape of XML enabling developers to master the art of parsing and generating XML documents validating data with XML schemas and transforming data using XSLT It also ventures into the realm of ASP NET unveiling the secrets of building dynamic web applications handling HTTP requests and responses and implementing authentication and authorization mechanisms Enriched with practical examples insightful explanations and expert guidance Creating Interoperability Solutions with Perl and NET stands as an invaluable resource for developers seeking to unlock the full potential of Perl and
