VALUE MANAGEMENT OF CONSTRUCTION PROJECTS Second Edition

Value Management is a philosophy set of principles and structured management methodology for improving organisational decision making and value for money It is well established in the international construction industry and has been endorsed as good practice in a range of UK government sponsored reports The authors have addressed the practical opportunities and difficulties of Value Management by synthesising background international developments and benchmarking with their own extensive consultancy and action research experience in Value Management to provide a comprehensive package of theory and practice Covering methods and practices frameworks of value and the future of value management this thoroughly updated second edition extends the integrated value philosophy methodology and tool kit to describe the application of Value Management to service delivery asset management and programmes in addition to projects products and processes In particular the new edition responds to A range of recent UK industry and government publications and most notably BS EN 16271 2012 Value management Functional expression of the need and functional performance specification the imminent update of BS EN 12973 2000 Value Management BS EN 1325 Value Management Vocabulary Terms and Definitions the changes to Value for Europe governing the training and certification of Value Management in European Union countries the UK Government s Management of Value MoV initiative and other leading reports international guidance and relevant standards Changes in Value Management practice particularly in programmes and projects Developments in the theory of value principally value for money measures whole life value option appraisal and benefits realisation Initiatives in asset management covering the management of physical infrastructure for example the suite of three standards under the generic title of BS ISO 55000 2014 Asset Management and its predecessor BSI PAS55 2008 Asset Management Specification for the Optimized Management of Physical Assets It contains a dedicated chapter of exemplar case studies which demonstrate the new areas of theory and practice and an extensive set of tools and techniques of use in Value Management practice Public and private construction clients and construction professionals such as cost consultants quantity surveyors architects asset managers engineers and project managers will all find Value Management of Construction Projects essential reading It will also be of interest to researchers and students on construction related courses particularly those at final year undergraduate and at Masters level

Understanding Game-based Approaches for Improving Sustainable Water Governance Wietske Medema, Chengzi Chew, Jan Franklin Adamowski, Igor Mayer, Arjen Wals, 2020-04-28

The sustainable governance of water resources relies on processes of multi stakeholder collaborations and interactions that facilitate knowledge co creation and social learning Governance systems are often fragmented forming a barrier to adequately addressing the myriad of challenges affecting water resources including climate change increased urbanized populations and pollution Transitions

towards sustainable water governance will likely require innovative learning partnerships between public private and civil society stakeholders It is essential that such partnerships involve vertical and horizontal communication of ideas and knowledge and an enabling and democratic environment characterized by informal and open discourse There is increasing interest in learning based transitions Thus far much scholarly thinking and to a lesser degree empirical research has gone into understanding the potential impact of social learning on multi stakeholder settings The question of whether such learning can be supported by forms of serious gaming has hardly been asked This Special Issue critically explores the potential of serious games to support multi stakeholder social learning and collaborations in the context of water governance Serious games may involve simulations of real world events and processes and are challenge players to solve contemporary societal problems they therefore have a purpose beyond entertainment They offer a largely untapped potential to support social learning and collaboration by facilitating access to and the exchange of knowledge and information enhancing stakeholder interactions empowering a wider audience to participate in decision making and providing opportunities to test and analyze the outcomes of policies and management solutions Little is known about how game based approaches can be used in the context of collaborative water governance to maximize their potential for social learning While several studies have reported examples of serious games there is comparably less research about how to assess the impacts of serious games on social learning and transformative change

Design Economics for the Built Environment Herbert

Robinson, Barry Symonds, Barry Gilbertson, Ben Ilozor, 2015-06-15 The drive towards environmentally friendly buildings and infrastructure has led to a growing interest in providing design solutions underpinned by the core principles of sustainability to balance economic social and environmental factors Design Economics for the Built Environment Impact of sustainability on project evaluation presents new directions reflecting the need to recognise the impact of climate change and the importance of sustainability in project evaluation The aim is to provide a new approach to understanding design economics in the context of the changing policy environment legislative and regulatory framework and increasing economic environmental and social pressure as result of the sustainability agenda The book follows a structured approach from theories and principles in the earlier chapters to the practical applications and emerging techniques focusing on value and social economic and environmental considerations in making design decisions It starts with the policy context building on various theories and principles such as capital cost value of design and resource based theories the new rules of measurement NRM to explore cost planning the relationship between height and costs key socio economic and environmental variables for design appraisal eco cost value ratio EVR whole life theory and the treatment of carbon emission as external costs productivity and efficiency fiscal drivers and legal framework for carbon reduction procurement and allocation of risks in contracts Case studies practical examples and frameworks throughout reinforce theories and principles and relate them to current practice The book is essential reading for postgraduate students in architecture building and quantity surveying and is also a valuable

resource for academics consultants and policy makers in the built environment System-Based Vision For Strate Franco Bontempi,2003-01-01 Objective of conference is to define knowledge and technologies needed to design and develop project processes and to produce high quality competitive environment and consumer friendly structures and constructed facilities This goal is clearly related to the development and re use of quality materials to excellence in construction management and to reliable measurement and testing methods **Decision Making for Enhanced Health Security** Gilberto

Montibeller,2022-06-06 Health threats pose significant dangers to humankind and form a major source of human suffering and sorrow Responsible leadership and reasoned decision making can significantly improve the arenas that are affected by health threats through establishing a better allocation of very scarce resources for building health capabilities and for increasing health preparedness responsiveness and resilience This book examines how public health leaders can use the cutting edge research from Decision Sciences to better manage emerging and re emerging health threats with a focus on enhancing health security While these decisions must be informed by the best available evidence they must also address competing priorities and key uncertainties and must mitigate critical risks albeit in a cost effective manner which seeks to maximize societal value This is a book about how decisions on health security can be improved both in terms of the content that is utilized in a health decision analysis and the decision processes that are employed in reaching a decision This decision focused perspective can help public health leaders and public health experts to increase the health preparedness of health systems the task of which involves improving health capabilities increasing the robustness of health systems against health threats as well as strengthening health resilience and the responsiveness of these systems against disease outbreaks **The**

assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas
