Goh, Henk Schmidt, 2012-04-13 One day one problem is a unique adaptation of problem based learning PBL pioneered at Republic Polytechnic Singapore Here students are challenged each day with a problem from their domain and attain the necessary learning outcomes in the process of responding to the problem Throughout the day students would engage in small group discussions self directed learning and conversations with their teacher who plays the role of a facilitator This approach to learning and instruction represents a new brand of constructivist learning in a more

structured learning environment compared to conventional PBL This book contains a series of chapters by authors with first hand experience in the One day one problem PBL approach Unlike other books on PBL the chapters are both research informed and practical Results of empirical studies into the factors of PBL such as quality of problems tutor behaviours scaffoldings student learning and interest are discussed together with practical implications for the educator The book begins with an overview of the one day one problem process providing a viewpoint from both the student and tutor Republic Polytechnic s pedagogical philosophy and epistemological belief of education are introduced with the intent to share how the polytechnic designed and implemented a system that supports the philosophical beliefs Results and practical implications of empirical studies on the various factors that influence students learning in PBL are discussed These include the quality of problems and the use of scaffoldings for students learning tutors as facilitators preparation of staff for PBL student assessment how students learn in the process of PBL and student interest

Second International Research Handbook on Values Education and Student Wellbeing Terence Lovat, Ron Toomey, Neville Clement, Kerry Dally, 2023-11-14 This collection applies the principles underlying values education to addressing the many social and learning challenges that impinge on education today Insights in the fields of social and emotional learning student wellbeing and increasingly educational neuroscience have demonstrated that values education represents an efficacious pedagogy with holistic effects on students across a range of measures including social emotional and intellectual outcomes With schools in the 21st century confronting issues such as gender identity stemming radicalism mental health equity for disadvantaged groups bullying respect and the meaning of consent values education offers a way of teaching and learning that integrates and enhances student s affective and cognitive functioning The earlier edition of this book has become a standard reference for scholars and practitioners in the fields of values education moral education and character education Its citation rates reads and downloads have been consistently and enduringly high as have those of its companion text Values Pedagogy and Student Achievement A decade on the main purpose of the revised edition is to update and incorporate new research and practice relevant to values education Recent insights in the fields of neuroscience and social and emotional learning and their implications for education and student wellbeing are more overt than they were when the first edition was being compiled Additionally advanced thinking in the field of epistemology how humans come to know and therefore learn has also sharpened especially through the later writings of prominent scholars like Jurgen Habermas The revised edition has preserved the essential spirit and thrust of the original edition while making space for some of these new insights about the potential of values education to establish optimal and harmonious learning and social environments for both students and teachers

Problem-Based Learning in Clinical Education Susan Bridges, Colman McGrath, Tara L. Whitehill, 2012-01-05 Developed in the context of health sciences education in the late 1960s problem based learning PBL is now widely deployed as an education methodology Its problem solving collaborative student centred ethos is seen as a more

appropriate system of pedagogy than earlier chalk and talk modes Focusing on its use in clinical education this collection of recent scholarship on PBL examines the ways in which PBL is both conceived and implemented in clinical education The work has a dual emphasis research driven on the one hand while on the other assessing new methodologies to explore how problem based curricula support the achievement of students learning outcomes in the context of clinical education The chapters draw on studies that explore PBL both theoretically and empirically The volume s eclecticism capitalises on the growing body of empirical research into PBL evaluations It balances this with studies analysing the relatively new area of discourse based research on PBL in action whose focus has been to interrogate the how of student learning in curricula with PBL content This publication will be of interest to clinical teachers curriculum designers and those interested in innovations in the scholarship of teaching and learning in PBL curricula *International Research Handbook on Values Education and Student Wellbeing* Terence Lovat,Ron Toomey,Neville Clement,2010-08-05 Informed by the most up to date research from around the world as well as examples of good practice this handbook analyzes values education in the context of a range of school based measures associated with student wellbeing These include social emotional moral and spiritual growth elements that seem to be present where intellectual advancement and academic achievement are being maximized This text comes as values education widens in scope from being concerned with morality ethics civics and citizenship to a broader definition synonymous with a holistic approach to education in general This expanded purview is frequently described as pedagogy relating to values and wellbeing This contemporary understanding of values education or values and wellbeing pedagogy fits well with recent neuroscience research This has shown that notions of cognition or intellect are far more intertwined with social and emotional growth than earlier educational paradigms have allowed for In other words the best laid plans about the technical aspects of pedagogy are bound to fail unless the growth of the whole person social emotional moral spiritual and intellectual is the pedagogical target Teachers and educationalists will find that this handbook provides evidence culled from both research and practice of the beneficial effects of such a values and wellbeing pedagogy **Healthcare Quality**

Hegel's Civic Republicanism Kenneth Westphal, 2019-11-11 In this book Westphal offers an original interpretation of Hegel's moral philosophy Building on his previous study of the role of natural law in Hume's and Kant's accounts of justice Westphal argues that Hegel developed and justified a robust form of civic republicanism Westphal identifies for the first time the proper genre to which Hegel's Philosophical Outlines of Justice belongs and to which it so prodigiously contributes which he calls Natural Law Constructivism an approach developed by Hume Rousseau Kant and Hegel He brings to bear Hegel's adoption and

augmentation of Kant's Critique of rational judgment and justification in all non formal domains to his moral philosophy in his *Outlines*. Westphal argues that Hegel's justification for the standards of political legitimacy successfully integrates Rousseau's Independence Requirement into the role of public reason within a constitutional republic. In these regards Hegel's moral and political principles are progressive not only in principle but also in practice. Hegel's Civic Republicanism will be of interest to scholars of moral philosophy, social and political philosophy, philosophy of law, Hegel, eighteenth and nineteenth century philosophy.

Engineering Education for a Smart Society Michael E. Auer, Kwang-Sun Kim, 2017-07-05. This book presents selected papers from the World Engineering Education Forum Global Engineering Deans Council held in November 2016 in Seoul, Korea. The massive changes currently underway in all areas of society, especially in engineering, and consequently in engineering education, call for new pedagogic qualifications and approaches. To face these current real world challenges, higher education has to find innovative ways to quickly respond to these new needs. The papers gathered here address three essential problems. The main approach to engineering in the 21st century is collaboration at many levels within universities or colleges, between institutions and on a global scale. At the same time, we need a new quality of collaboration between academia, industry, professional and governmental organizations. The complexity of engineering projects and solutions is rapidly growing and increasingly includes non technical aspects. One of the key tasks for future engineers will be the development of a sustainable society which is essential to keeping the global environment in balance.
