EXAMPLES WITH MATLAB** Cesar Perez Lopez, MATLAB has the tool Deep Learning Toolbox that provides algorithms functions and apps to create train visualize and simulate neural networks You can perform classification regression clustering dimensionality reduction timeseries forecasting and dynamic system modeling and control Dynamic neural networks are good at timeseries prediction You can use the Neural Net Time Series app to solve different kinds of time series problems It is generally best to start with the GUI and then to use the GUI to automatically generate command line scripts Before using either method the first step is to define the problem by selecting a data set Each GUI has access to many sample data sets that you can use to experiment with the toolbox If you have a specific problem that you want to solve you can load your own data into the workspace With MATLAB is possible to solve three different kinds of time series problems In the first type of time series problem you would like to predict future values of a time series y_t from past values of that time series and past values of a second time series x_t This form of prediction is called nonlinear autoregressive network with exogenous external input or NARX In the second type of time series problem there is only one series involved The future values of a time series y_t are predicted only from past values of that series This form of prediction is called nonlinear autoregressive or NAR The third time series problem is similar to the first type in that two series are involved an input series predictors x_t and an output series responses y_t Here you want to predict values of y_t from previous values of x_t but without knowledge of previous values of y_t This book develops methods for time series forecasting using neural networks across MATLAB **Fundamentals of Cognitive Psychology** Ronald T.
