Fusion Energy Technology R&D Priorities Laila El-Guebaly, 2024-11-17 Fusion Energy Technology R D Priorities examines the current landscape of fusion technology With a strong focus on technological advances the book considers technical challenges and priorities to further the development of fusion research Beginning with an introduction to fusion technology research and development the book then presents an overview of basic magnetic fusion concepts experimental facilities and fusion materials R D Subsequent chapters then take a deep dive into capabilities of potential neutron sources for materials testing plasma facing components and blanket and tritium systems Vacuum vessels and shields and superconducting magnets are also highlighted before concluding with modelling techniques computational tools safety features and environmental considerations Presenting the most advanced developments in nuclear fusion R D this is an essential read for researchers and engineers interested in nuclear energy and fusion technology Presents the latest advances

and developments in fusion science and technology Outlines the R D priorities and critical issues that are foundational to the further development of fusion energy technologies Identifies technical fusion challenges and considers future perspectives Reviews the present day status of essential R D programs that support fusion for energy

Magnetohydrodynamic Stability of Tokamaks Hartmut Zohm,2014-12-09 This book bridges the gap between general plasma physics lectures and the real world problems in MHD stability In order to support the understanding of concepts and their implication it refers to real world problems such as toroidal mode coupling or nonlinear evolution in a conceptual and phenomenological approach Detailed mathematical treatment will involve classical linear stability analysis and an outline of more recent concepts such as the ballooning formalism The book is based on lectures that the author has given to Master and PhD students in Fusion Plasma Physics Due its strong link to experimental results in MHD instabilities the book is also of use to senior researchers in the field i e experimental physicists and engineers in fusion reactor science The volume is organized in three parts It starts with an introduction to the MHD equations a section on toroidal equilibrium tokamak and stellarator and on linear stability analysis Starting from there the ideal MHD stability of the tokamak configuration will be treated in the second part which is subdivided into current driven and pressure driven MHD This includes many examples with reference to experimental results for important MHD instabilities such as kinks and their transformation to RWs infernal modes peeling modes ballooning modes and their relation to ELMS Finally the coverage is completed by a chapter on resistive stability explaining reconnection and island formation Again examples from recent tokamak MHD such as sawteeth CTMS NTMS and their relation to disruptions are extensively discussed
