Imagination And Its Pathologies Philosophical Psychopathology:

Imagination and Its Pathologies James Phillips, James Morley, 2003 Madness has been viewed as a faulty mix of ideas by a deranged and violent imagination This study shows that the relation of the imagination to pathological phenomena is as diverse and complex as the human condition The imagination has the power not only to react to the world but to recreate it

Embodied Imaginations Chidambaram Ramesh, 2023-06-05 The science behind the writers experience of characters developing their own will and taking objective forms Many writers have the experience that their characters have evolved their own personalities They start to tell their own stories and sometimes they could even rebel against the author s ideas for them and change the course of the whole plot That is not all though Sometimes literary characters assume objective appearances which are visible not just to the creators but also to others and manifesting in the real world These experiences raise several interesting philosophical and scientific questions Have the writers unwittingly created quasi conscious entities by the power of their minds Can thoughts manifest as something tangible that can be seen heard or even touched How genuine are the contents of the mind Embodied Imaginations explores these questions highlighting the results of an investigation on this fascinating topic stemming from personal anecdotes of many writers Providing scientific evidence for the existences of these mental constructs the goal is to collect robust and reliable building blocks that may help to deconstruct perceptions and provide answers to this phenomenon The book attempts to give modern science a place where spiritual philosophical and mystical threads can be interwoven Efforts have been made to corroborate theoretical claims with experimental evidence contributing to research in cognitive psychology to determine the role of imagination in creating external reality This book will introduce you to the mysterious and profound part of creative writing that you never knew existed before

A Metaphysics of Psychopathology Peter Zachar, 2014-03-28 An exploration of what it means to think about psychiatric disorders as real true and objective and the implications for classification and diagnosis In psychiatry few question the legitimacy of asking whether a given psychiatric disorder is real similarly in psychology scholars debate the reality of such theoretical entities as general intelligence superegos and personality traits And yet in both disciplines little thought is given to what is meant by the rather abstract philosophical concept of real Indeed certain psychiatric disorders have passed from real to imaginary as in the case of multiple personality disorder and from imaginary to real as in the case of post traumatic stress disorder In this book Peter Zachar considers such terms as real and reality invoked in psychiatry but often obscure and remote from their instances as abstract philosophical concepts He then examines the implications of his approach for psychiatric classification and psychopathology Proposing what he calls a scientifically inspired pragmatism Zachar considers such topics as the essentialist bias diagnostic literalism and the concepts of natural kind and social construct Turning explicitly to psychiatric topics he proposes a new model for the domain of psychiatric disorders the imperfect community model which avoids both relativism and essentialism He uses this model to understand such recent

controversies as the attempt to eliminate narcissistic personality disorder from the DSM 5 Returning to such concepts as real true and objective Zachar argues that not only should we use these metaphysical concepts to think philosophically about other concepts we should think philosophically about them

Classifying Psychopathology Harold Kincaid, Jacqueline A. Sullivan, 2023-10-31 Scholars question the extent to which current psychiatric classification systems are inadequate for diagnosis treatment and research of mental disorders and offer suggestions for improvement In this volume leading philosophers of psychiatry examine psychiatric classification systems including the Diagnostic and Statistical Manual of Mental Disorders DSM asking whether current systems are sufficient for effective diagnosis treatment and research Doing so they take up the question of whether mental disorders are natural kinds grounded in something in the outside world Psychiatric categories based on natural kinds should group phenomena in such a way that they are subject to the same type of causal explanations and respond similarly to the same type of causal interventions When these categories do not evince such groupings there is reason to revise existing classifications The contributors all question current psychiatric classifications systems and the assumptions on which they are based They differ however as to why and to what extent the categories are inadequate and how to address the problem Topics discussed include taxometric methods for identifying natural kinds the error and bias inherent in DSM categories and the complexities involved in classifying such specific mental disorders as oppositional defiance disorder and pathological gambling Contributors George Graham Nick Haslam Allan Horwitz Harold Kincaid Dominic Murphy Jeffrey Poland Nancy Nyquist Potter Don Ross Dan Stein Jacqueline Sullivan Serife Tekin Peter Zachar

Schutzian Research vol. 3 / 2011 Michael Barber, 2011-01-01

Extraordinary Science and Psychiatry Jeffrey Poland, Serife Tekin, 2024-04-30 Leading scholars offer perspectives from the philosophy of science on the crisis in psychiatric research that exploded after the publication of DSM 5 Psychiatry and mental health research is in crisis with tensions between psychiatry's clinical and research aims and controversies over diagnosis treatment and scientific constructs for studying mental disorders At the center of these controversies is the Diagnostic and Statistical Manual of Mental Disorders DSM which especially after the publication of DSM 5 many have found seriously flawed as a guide for research This book addresses the crisis and the associated extraordinary science Thomas Kuhn's term for scientific research during a state of crisis from the perspective of philosophy of science The goal is to help reconcile the competing claims of science and phenomenology within psychiatry and to offer new insights for the philosophy of science The contributors discuss the

epistemological origins of the current crisis the nature of evidence in psychiatric research and the National Institute for Mental Health's Research Domain Criteria project They consider particular research practices in psychiatry computational personalized mechanistic and user led and the specific categories of schizophrenia depressive disorder and bipolar disorder Finally they examine the DSM's dubious practice of pathologizing normality Contributors Richard P Bentall John Bickle Robyn Bluhm Rachel Cooper Kelso Cratsley Owen Flanagan Michael Frank George Graham Ginger A Hoffman Harold Kincaid Aaron Kostko Edouard Machery Jeffrey Poland Claire Pouncey erife Tekin Peter Zachar

Disturbed Consciousness Rocco J. Gennaro, 2024-05-28 Essays defend discuss and critique specific theories of consciousness with respect to various psychopathologies In *Disturbed Consciousness* philosophers and other scholars examine various psychopathologies in light of specific philosophical theories of consciousness The contributing authors some of them discussing or defending their own theoretical work consider not only how a theory of consciousness can account for a specific psychopathological condition but also how the characteristics of a psychopathology might challenge such a theory Thus one essay defends the higher order thought HOT theory of consciousness against the charge that it cannot account for somatoparaphrenia a delusion in which one denies ownership of a limb Another essay argues that various attempts to explain away such anomalies within subjective theories of consciousness fail Other essays consider such topics as the application of a model of unified consciousness to cases of brain bisection and dissociative identity disorder prefrontal and parietal underconnectivity in autism and other psychopathologies self deception and the self model theory of subjectivity schizophrenia and the vehicle theory of consciousness and a shift in emphasis away from an internal or brainbound approach to psychopathology to an interactive one Each essay offers a distinctive perspective from the intersection of philosophy consciousness research and psychiatry Contributors Alexandre Billon Andrew Brook Paula Droege Rocco J Gennaro Philip Gerrans William Hirstein Jakob Hohwy Uriah Kriegel Timothy Lane Thomas Metzinger Erik Myin Inez Myin Germeys Myrto Mylopoulos Gerard O'Brien Jon Opie J Kevin O'Regan Iuliia Plushch Robert Van Gulick

Merleau-Ponty, Interiority and Exteriority, Psychic Life and the World Dorothea Olkowski, James Morley, 1999-09-09

Explores Merleau Ponty's approach of taking the phenomenon of the body out of the dualistic constraints of interior and exterior and the consequences thereof Merleau-Ponty's Philosophy Lawrence Hass, 2008 A clear and comprehensive introduction to the thought of French philosopher Maurice Merleau Ponty **Handbook of Phenomenology and Cognitive Science** Daniel Schmicking, Shaun Gallagher, 2009-12-16 This volume explores the essential issues involved in bringing phenomenology together with the cognitive sciences and provides some examples of research located at the intersection of these disciplines The topics addressed here cover a lot of ground including questions about naturalizing phenomenology the precise methods of phenomenology and how they can be used in the empirical cognitive sciences specific analyses of perception attention emotion imagination embodied movement action and agency representation and cognition intersubjectivity language and metaphor In addition there are chapters that focus on empirical experiments involving psychophysics perception and neuro and psychopathologies The idea that phenomenology understood as a philosophical approach taken by thinkers like Husserl Heidegger Sartre Merleau Ponty and others can offer a positive contribution to the cognitive sciences is a relatively recent idea Prior to the 1990s phenomenology was employed in a critique of the first wave of cognitivist and computational approaches to the mind see Dreyfus 1972 What some consider a second wave in cognitive science with emphasis on connectionism and neuroscience opened up possibilities for phenomenological intervention in a more positive way resulting in proposals like neurophenomenology Varela 1996 Thus brain imaging technologies can turn to phenomenological insights to guide experimentation see e.g. Jack and Roepstorff 2003 Gallagher and Zahavi 2008 **The Philosophy and Psychology of Delusions** Ana Falcato, Jorge Gonçalves, 2023-07-14 This book presents new philosophical work on delusions and their impact on everyday human behavior It explores a cluster of related topics at the intersection of philosophy of mind and psychiatry while also charting the historical development of work on delusions Within psychiatry there are several disputes about the nature and origin of delusions Whereas some authors see only an abnormal phenomenon that needs to be treated by psychological or pharmacological means others hold that delusions can be psychologically adaptive and even have epistemic benefits This book brings together an interdisciplinary group of contributors to build consensus around what delusions are and how they impact the human mind Part 1 provides readers with an informed historical discussion of delusions and carefully examines the contemporary impact of these historical perspectives Part 2 analyzes the impact of contemporary views of delusions on the mental and emotional life of human agents Finally Part 3 explores the normative frameworks of delusions and analyzes the impact of some of their behavioral consequences on the daily life of subjects and their caregivers The Philosophy and Psychology of Delusions is essential reading for researchers and graduate students working at the intersection of philosophy psychiatry and psychology *Being Amoral* Thomas Schramme, 2014-08-29 Investigations of specific moral dysfunctions or deficits that shed light on the capacities required for moral agency Psychopathy has been the subject of investigations in both philosophy and psychiatry and yet the conceptual

issues remain largely unresolved This volume approaches psychopathy by considering the question of what psychopaths lack The contributors investigate specific moral dysfunctions or deficits shedding light on the capacities people need to be moral by examining cases of real people who seem to lack those capacities The volume proceeds from the basic assumption that psychopathy is not characterized by a single deficit for example the lack of empathy as some philosophers have proposed but by a range of them Thus contributors address specific deficits that include impairments in rationality language fellow feeling volition evaluation and sympathy They also consider such issues in moral psychology as moral motivation moral emotions and moral character and they examine social aspects of psychopathic behavior including ascriptions of moral responsibility justification of moral blame and social and legal responses to people perceived to be dangerous As this volume demonstrates philosophers will be better equipped to determine what they mean by the moral point of view when they connect debates in moral philosophy to the psychiatric notion of psychopathy which provides some guidance on what humans need in order be able to feel the normative pull of morality And the empirical work done by psychiatrists and researchers in psychopathy can benefit from the conceptual clarifications offered by philosophy Contributors Gwen Adshead Piers Benn John Deigh Alan Felthous Kerrin Jacobs Heidi Maibom Eric Matthews Henning Sass Thomas Schramme Susie Scott David Shoemaker Walter Sinnott Armstrong Matthew Talbert

Psychopathologies of the Living Patrick ffrench, Nigel Saint, 2025-09-17

Psychopathologies of the Living makes the work of the French psychoanalyst Pierre F dida 1934 2002 available in English for the first time Patrick ffrench and Nigel Saint present key essays selected from F dida s extensive oeuvre The book directs attention to two salient dimensions of F dida s writing his attention to the pathologies of the body considered as both a psychic and somatic entity and his insistence on the relevance of psychoanalytic thought to the sciences of life The chapters included in this collection detail F dida s creative use of aesthetic sources in his psychoanalytic work his distinctive and creative manipulation and revision of central psychoanalytic concepts and his precise attention to the texts of Freud Ferenczi and Winnicott among others This selection of F dida s essays also shows his avoidance of thematisation or explicit theorisation for F dida the theory of psychoanalysis must arise out of the specific interplay of language and the space of the session Psychopathologies of the Living will be of great interest to psychoanalysts in practice and in training and to academics and scholars of philosophy aesthetics and literary studies

The Routledge Handbook of Philosophy of

Delusion Ema Sullivan-Bissett, 2024-11-15 Delusions play an important and fascinating role in philosophy and are a particularly fertile area of study in recent years spanning philosophy of mind and psychology epistemology ethics psychology psychiatry and cognitive science The Routledge Handbook of Philosophy of Delusion explores the conceptual and philosophical issues in the study of delusion and is the first major reference source of its kind Comprising 38 chapters by an international team of contributors the Handbook is divided into six clear parts The Nature of Delusion Delusion in Disorders Epistemology of Delusion Delusion s Place in the Mind Delusion Formation Responsibility Culture and Society Within these

sections key topics are discussed including delusions and wellbeing delusions as they occur in wider mental disorder the epistemic profile of delusions evidence justification rationality how delusions are formed delusions and folk psychology how they relate to belief self deception imagination and so on and delusions in the wider social and cultural context An outstanding resource for both students and researchers The Routledge Handbook of Philosophy of Delusion is essential reading for those working on delusion in philosophy departments and also suitable for those in related disciplines such as psychology psychiatry and cognitive science

Scaffolded Minds Somogy Varga, 2025-02-04 A comprehensive account of cognitive scaffolding and its significance for understanding mental disorders In Scaffolded Minds Somogy Varga offers a novel account of cognitive scaffolding and its significance for understanding mental disorders The book is part of the growing philosophical engagement with empirically informed philosophy of mind which studies the interfaces between philosophy and cognitive science Varga draws on two recent shifts within empirically informed philosophy of mind the first toward an intensified study of the embodied mind and the second toward a study of the disordered mind that acknowledges the convergence of the explanatory concerns of psychiatry and interdisciplinary inquiries into the mind Varga sets out to accomplish a dual task theoretical mapping of cognitive scaffolding and the application calibration of fine grained philosophical distinctions to empirical research He introduces the notion of actively scaffolded cognition ASC and offers a taxonomy that distinguishes between intrasomatic and extrasomatic scaffolding He then shows that ASC offers a productive framework for considering certain characteristic features of mental disorders focusing on altered bodily experience and social cognition deficits With Cognitive Scaffolding Varga aims to establish that shifting attention from mental symptoms to fine grained sensorimotor aspects can lead to identifying diagnostic subtypes or even specific sensorimotor markers for early diagnosis
